## PREFACE

'... that most irksome and difficult part of literature, with so much labour of the memory, and with so little assistance of the understanding.'<sup>1</sup>

There are two ways of studying the historiography of linguistics: either you stress the continuity of the history of linguistics and bring out the essential similarities between geographically and chronologically diverse approaches to the study of speech, or you treat every approach as an individual and unique phenomenon without bothering with parallels. The former method was used by Chomsky in his 'Cartesian linguistics', and it brought him a lot of criticism from both historians and linguists.<sup>2</sup> The latter, more or less philological, form of the historiography of linguistics seemed to have gone out of use, but there appears to be a revival in recent times: congresses, collections of studies, a special journal.<sup>3</sup> Within this new wave of interest in the history of linguistics Arabic linguistics does not seem to have received its full share, neither from general linguists, nor from Arabists;<sup>4</sup> it is rather frustrating to read that 'curiously enough, the Arabs seem to have contributed nothing to the study of language comparable to the additions and improvements they made in mathe-

<sup>1</sup> Robert Lowth, *Introduction to English grammar*, London, 1762; ed. Alston, 1967, no. 18, preface.

<sup>2</sup> Chomsky, 1966. From the many reviews and discussions pro et contra we cite: Aarsleff, 1970, especially pp. 571-2; id., 1974; Koerner, 1976; Mial, 1969; reviews in: *Linguistics*, 49, 1969, 74-91 (Brekke; the same review in: *Linguistische Berichte*, 1, 1969, 52-66); *Archiv Orientalni*, 36, 1968, 434-5 (Zgusta); *International Journal of American Linguistics*, 34, 1968, 290-303 (Zimmer); *Philosophical Review*, 77, 1968, 229-35 (Harsanyi); *Language*, 45, 1969, 343-64 (Lakoff).

<sup>3</sup> Congresses about the history of linguistics were held in 1964 at Burg Wartenstein bei Gloggnitz in Austria, and in 1968 in Chicago; the thirteenth volume of the series 'Current trends in linguistics', edited by H. Aarsleff, R. Austerlitz, D. Hymes, L. Romeo, E. Stankiewicz will be dedicated to the historiography of linguistics; a collection of studies about the history of linguistics with special attention to the relevance of Kuhn's theories for the historiography of linguistics was edited by Hymes, 1974; in his introduction to this collection Hymes announces the appearance of a new journal, *Historiographia Linguistica*, under the editorship of E. F. K. Koerner (cf. ib. pp. 20-1), which is now in its third year; an important collection of original articles has been edited by Farnet, 1976.

<sup>4</sup> The only comprehensive history of Arabic grammar is still G. Fittig's *Die grammatischen Schulen der Araber*, the first and only part of which was published in Leipzig, 1862.

matics, astronomy, physics, medicine, and natural history'.<sup>2</sup> The history of classical grammar is treated somewhat better, although not much.<sup>3</sup>

The special problem of the relationship between Greek and Arabic linguistic thinking is almost completely disregarded: reference is made almost solely to the supposed similarities between Aristotelian logic and Arabic grammar. The theory that Aristotle provided the Arabic grammarians with some basic notions concerning speech and the study of speech has been advanced before, especially in the past century, and it met then as now with the seemingly unrefutable objection that the origin of Arabic linguistics lies before the introduction of Greek writing into the Arabic world. Our thesis is that Greek logic (not just Peripatetic, but Stoic logic as well) did play a considerable role in the history of Arabic linguistic thinking, but only at a later time, during the 9th/3rd and the 10th/4th centuries, when the center of Arabic linguistics had been transferred to Baghdad. The beginnings of Arabic grammar, on the other hand, are characterized by the direct, personal contact with living Greek education and grammar in the recently conquered Hellenistic countries.<sup>4</sup>

We hold that in this early period many elements of linguistic theory, especially in the field of paradigms and terminology, were borrowed from Greek by those Arabic scholars who started to describe their own language scientifically.<sup>5</sup> When we use here the word 'borrowing' (or sometimes *calque*) we use the technical apparatus of the study of 'Christianisms' in Greek and Latin. The study of borrowings has reached such a level in this field that it may have a special methodological relevance for the study of borrowings from Greek into Arabic.<sup>6</sup>

The chapters of our dissertation are arranged according to a rough chronology. The first four chapters discuss Greek elements in the first

stages of Arabic grammar. Chapter I gives a brief sketch of the historical context of the process of Greek influence on Arabic grammar. The next three chapters deal with the various Greek elements we have found within this first stage: in the field of sound, articulation, and meaning (chapter II); in the theory of the parts of speech, declension, verbal tenses, and so on (chapter III); in the methodology of grammar, i.e., in the system of norms of linguistic method (chapter IV). Chapter V deals with the position of the two schools of Basra and Kufa in the history of Arabic linguistics.

Chapter VI and VII are concerned with a later stage, when Greek writings had begun to play a more indirect role, through their translations into Arabic: their influence was felt not only in grammar, but also in logic and philosophy. In chapter VI we sketch the historical context; then we examine in detail the logical arguments used in grammatical literature, in so far as they can be traced back to Greek influence (chapter VII). Chapter VIII discusses the role of the Mu'tazila, an important sect in the history of Muslim theology. The Mu'tazilites are characterized by their liberal use of Greek dialectic methods in defense of their theological dogmas, the most important of which was a rigorous monotheism. They should not be regarded as a group of free-thinking liberals, on the contrary, when their point of view gained official support under the 'Abbāsid caliphs from 833/218 till 850/236, they took a very intolerant stance on contrary opinions.<sup>10</sup> They are interesting for our purpose mainly because of their use of logical methods, and their particular views on speech and thinking. In chapter IX we discuss the theories concerning the origin of speech, a comparatively recent topic in Arabic linguistics. In chapter X, we examine the role of Stoic linguistics, especially in the theory of meaning.

Originally, the essential part of this dissertation was a translation of the work of a tenth century grammarian of Baghdad, namely the *Kitāb fi 'ilal al-nahw* (Explanation of grammatical norms) by Abū 'l-Qāsim 'Abd ar-Rahmān ibn Ishāq az-Zaḡḡālī.<sup>11</sup> We have abandoned this plan, but its traces are still discernible throughout our dissertation in the form of the many quotations from the *Kitāb*, which turned out to be a very useful work on Arabic linguistics, not because of

<sup>2</sup> J. C. Greene, in Hymns, 1974, 494.

<sup>3</sup> A brief, but useful state of the art in Scaglione, 1970, 11-43.

<sup>4</sup> General studies about the history of the relevant period: Byzantine history: Ostrogorsky, 1963<sup>2</sup>; Vasiliev, 1935-68; id., 1970<sup>2</sup>; Arabic history: Spuler, 1952-3; Gabrieli, 1963; Brockelmann, 1974<sup>2</sup>; Hitti, 1968<sup>2</sup>. About the problem of the contacts between the Byzantine empire and the Arabic East: Kraemer, 1959.

<sup>5</sup> We use the word 'scientifically' in order to distinguish between the activities of Sibawayhi and his immediate predecessors on the one hand, and the obscure origins of Arabic grammar at a pre-scientific stage on the other; cf. the discussion in chapter I.

<sup>6</sup> Cf. Mohrmann, 1961<sup>2</sup>, especially the articles 'Quelques traits caractéristiques de la latinité des Chrétiens' (21-50); 'L'étude de la latinité chrétienne. État de la question, méthodes, résultats' (83-102); 'Le problème du vocabulaire chrétien. Expériences d'évangélisation paléo-chrétiennes et modernes' (113-22); about *calques*: ib. 44 sqq.; 280 sqq.

<sup>10</sup> Cf. about this period: Patton, 1897; Gabrieli, 1929; about the Mu'tazila: Nadir, 1936.

<sup>11</sup> Data about this Arabic grammarian in the introduction to the edition of the *Kitāb* by M. Muṭṭaruk, Cairo, 1959.

the originality of the author, but because of his personal acquaintance with most of the important Baghdadian grammarians.<sup>12</sup> Often we have not been able to trace a particular point of linguistic doctrine back to its first occurrence; in these cases we have contented ourselves with quotations from the *Idāh*, or we have had to rely on even later authority, more than once as late as Suyūṭī, a fifteenth century compiler, who wrote his *Muzhir* by quoting extensively from all sorts of grammatical and lexicographical writings. The necessity of combining the two disciplines of Classical and Arabic studies caused some rather long discussions; we tried to make the context comprehensible for both disciplines, but we fully understand that digressions are often tediously self-evident to the specialist in either field.

In translating Arabic and Greek terminology we have generally used current English equivalents, not as a matter of principle, but in order to make the discussion somewhat more readable; a few exceptions to this custom are mentioned in the following note.<sup>13</sup> Details about the abbreviations used in references and quotations are given in the bibliography at the end of the book.<sup>14</sup>

In my view it is difficult, given the present condition of our sources, to determine beyond any reasonable doubt the extent of Greek influence in Arabic grammar, as far as the scientific beginnings of Arabic grammar are concerned—for later periods we have translations of the *Corpus Aristotelicum* as a textual basis at our disposal. At

<sup>12</sup> As he himself tells us, Zaḡgī, I, 78-80.

<sup>13</sup> One should keep in mind that the English terms are not synonymous with the Arabic terms, e.g. 'declension' translates *ʿrdb*; 'nominative' represents *raf*. In a few cases we have used the Arabic term, when no English term was available, e.g. *alif*, *mapdur* (for obvious reasons the English 'infinitive' could not be used). In other cases a Latin term was used, e.g. 'nominatum' (for *muwawwid*). In accordance with Arabic grammatical theories the concept of 'declension' has sometimes been applied to the verbs, so that verbs may be said to be declinable and to have cases. For *ḡann* we have chosen 'jussive'. 'Inflection' translates *ṣarf* or *ṣarfī*. One should always keep in mind that *ism* and *fiʿl* have two meanings: 'noun' / 'name' and 'verb' / 'action', respectively. The third part of speech, *ḥarf*, is the ('meaningful') particle; *ḥarf* as against *ḥaraka* (vowel) is sometimes translated as 'consonant', but in other cases we preferred to translate this term with 'letter'. Added words in quotations are between brackets; explanations are introduced by 'sc.'; the other abbreviations will be obvious. Greek proper names are transliterated, except 'Plato' and 'Aristotle'; Latin proper names are used in their Latin form. The system of transliteration of Arabic is almost identical to that of Arabic (exceptions: *al* instead of *al*; the assimilation of the *ḥarf* *ṣawliyya* is indicated, as well as the *ḥawṣal al-waṣf*).

<sup>14</sup> In quoting from the *Stoicorum Veterum Fragmenta* we have used two systems for ease of reference: either three figures, referring to volume, page, line; or two figures, referring to volume and fragment.

we can show the probability of a connection between Arabic and Greek linguistic thinking. I am fully aware of the fact that details of my explanation of the phenomena and terminology of Arabic grammar, which form the basis of my argumentation, are perhaps consistent with alternative explanations. I have, however, tried to define the historical context within which I place my explanations, and this, I believe, justifies my bringing together these arguments and regarding them as sufficient support for my case, even though I am also aware of the high risk of a vicious circle: starting from the assumption that there was contact between Greek and Arabic grammar, I was, of course, continuously tempted to regard something as proof precisely because of my original thesis. I have taken this line of research, because up till now there has been hardly any serious attempt to put together materials from later Greek grammar and Arabic linguistic thinking. I have tried to collect these materials and to compare them, even if the comparison seemed sometimes far-fetched or trivial. Perhaps these materials will be useful, even if the original thesis should have to be modified.

Historiography of linguistics is a dangerous field of research, in which anachronistic thinking is very tempting. I have, however, refrained from any commentary on similarities and parallels between Arabic linguistic theory and contemporary linguistics, and only tried to present the facts as I saw them, without subscribing either to a relativist or an evolutionist point of view. The historiography of linguistics has not yet begun, or rather, has not yet proceeded beyond a first exploration of the facts. What we need now is a methodology, and a critical reflection on the historical growth of linguistics. We may expect that in this sense the historiography of linguistics will contribute, not so much to the solution of the problems of our discipline, as to the formulation of the relevant questions.

N.B. The abbreviations A and G refer to the original texts included on pp. 209 ff. The former abbreviation indicates an Arabic text, the latter a Greek one.

## CHAPTER ONE

### THE FIRST CONTACT WITH GREEK GRAMMAR

<sup>1</sup> This science is called in Greek *grammatikē*, and in Arabic *naḥw*.<sup>2</sup>

It is nowadays generally agreed that learned Arabs in a good many branches of science were influenced by their Greek predecessors, but a restriction is made for the so-called pure Arabic sciences, such as the science of tradition and linguistics. This view is partly based on the Arabic tradition: a good example of the traditional account of the history of linguistics is the one given by Ibn Ḥaldūn, who explains how the science of linguistics was born from the necessity to prevent the corruption of the Arabic language.<sup>3</sup> Our intention is to show that a claim for Greek influence may be made for Arabic linguistics as well, and that, as a matter of fact, this influence followed the same course in linguistics as, for instance, in the field of logic and philosophy. This means that we have to distinguish between a direct and an indirect way of transmission, the first one of which was earlier than the second. In the first place we must direct our attention to the origin of Arabic linguistics in order to demonstrate which elements in this phase were the result of direct contact between Arabic grammarians and Hellenistic culture in many of the conquered territories; in the second, we must show how later developments may be explained by the growing influence of Arabic translations of the works of Aristotle and his commentators.

All over the eastern Hellenistic world, in every place of any cultural standing, the Greek language was being used, at first as a sort of lingua franca for the cultured people—the lower strata of the community continued to speak Aramaic dialects (e.g. Syriac) or Coptic—,<sup>4</sup> but soon there arose independent cultural centres, the importance of

<sup>1</sup> *Iḥwār*, *Maḥ.* 42, 13 [A1].

<sup>2</sup> b. *Ḥalīl*, *Maq.*, 546-7; cf. also Fick, 1933<sup>2</sup>, 6 sqq.; Weiß, 1910, 348-50.

<sup>3</sup> Cf. e.g. Festugière, 1939, 291 sqq.: several monks did not even understand Greek (4th century). For the situation in Egypt we refer to note 16 below. About the political situation in the Byzantine empire and the hostility towards the central government in the Eastern provinces: Stratos, 1968.

which grew as the power of Greece itself declined. Alexandria in Egypt and Antioch in Syria were among the most important ones,<sup>4</sup> but in a later period the number of cities with their own universities and educational systems increased, partly as a result of the competition between the various Christian sects, for instance in the Nestorian East Edessa and Nisibis,<sup>5</sup> and later, in the Persian empire, the famous school of Gundī-Šāpūr near Kūfa, a refuge for scholars of other universities who had had to flee because of their heretical opinions. The Persian emperor Hōšroes Anušīrvān (d. 587 A.D.) gave shelter at his court to those philosophers who were without a job after Justinian had closed the Athenian academy (in 529 A.D.), among them even the great Simplicius!<sup>6</sup> In these centres of culture and science, Greek philosophy was studied and Greek writings were translated into Syriac and Persian.<sup>7</sup> It was in this region, near Gundī-Šāpūr, and not in the neighbourhood of the Umayyad court at Damascus, that the first signs of Greek influence appeared. The first juridical speculations,<sup>8</sup> and the nature of the first Mu'tazilite debates about the creation of the Qur'ān, the problem of free will, and the doctrine concerning the attributes of Allāh:<sup>9</sup> all these issues bear witness to the contact between the two cultures in various fields, before the 'official' translation of Greek writings. Muslims and Christians were forced to live together, and so, inevitably, Greek knowledge was communicated to the East before the indirect transmission began.<sup>10</sup> We will try to show that this first contact played a considerable role in the field of logic and linguistics.

<sup>4</sup> On Alexandria: Mayerhof, 1930; Schemmel, 1909; Parsons, 1952; Meyerhof, 1933; Bell, 1946. On Antioch: Downey, 1966<sup>2</sup>.

<sup>6</sup> Agathias, II, 30.

<sup>7</sup> There is an interesting statement in the chronography of Abū 'Isā ibn al-Munajjim (9th/10th century; Sezgin, 1967, I, 322) that under the reign of the Sassanid king Šāpūr (241-272 A.D.) the Persians conquered Greek and Roman provinces, such as Upper Mesopotamia, Syria, Egypt, Constantinople (sic!), and that they took 'the books of the philosophers'. King Šāpūr even received, according to this account, Greek scientific books from the Roman emperor (Islamic philosophy, 1972, 437-66, especially p. 454); cf. Peters, 1968, 46.

<sup>8</sup> On traces of Greek logic and Roman law in early Muslim legal thought: van Ess, 1970, 33 and n. 59; Schacht, 1930<sup>b</sup>. Cf. below, chapter IV, note 53.

<sup>9</sup> On the polemic of Byzantine theologians against Islam: Khoury, 1969<sup>2</sup>; Krambacher, 1897<sup>2</sup>, 49-51. The influence of the Church fathers on Islamic theological thinking is emphasized by Seala, 1964; cf. also van Ess' remarks, 1966, 18-20.

<sup>10</sup> de Lacy O'Leary, 1949, 142; also pp. 68, 143; Draf, 1968, 21.

The Hellenistic universities not only gave courses in Greek philosophy, but also in the Greek language, which as the most important instrument and medium of teaching, constituted a compulsory subject for every student of philosophy.<sup>11</sup> For a long time the language of education remained Greek, but in the East Syriac gradually took its place. At the end of the 4th century a Spanish nun Egeria, who made a pilgrimage to the Holy Land, observed that only part of the population spoke both Greek and Syriac, the rest spoke only one of the two languages.<sup>12</sup> Bilingualism was probably restricted to the upper classes, but sometimes even a bishop only began to study Greek at an advanced age.<sup>13</sup> Greek exercised an enormous influence upon Syriac—many loanwords, the system of the vowel-signs,<sup>14</sup> even the literary style—but Syriac remained in use as the language of the lower classes. After the invasion of the Arabs, it became more important as the intermediary language between Greek and Arabic: translations were made first from Greek into Syriac, and then from Syriac into Arabic. This shows that the study of Greek did not disappear; on the contrary, it became more important than ever to have at one's disposal trained translators who could provide the students with translations of Greek philosophical writings.<sup>15</sup> In Egypt, although even among the clergy many people, even bishops, did not understand Greek,<sup>16</sup> this language remained in use as the language of educated

<sup>11</sup> Goetz, 1948, 10.

<sup>12</sup> *Itinerarium Aetheriae (Egeriae)*, ed. H. Pélissier, Paris, 1948 (Sources Chrétiennes): '... and in that province (sc. Syria) only part of the population knows both Greek and Syriac; others only Greek, and still others only Syriac; the bishop, therefore, always speaks Greek, never Syriac, even if he knows it. There is always a priest nearby, who translates what the bishop says in Greek into Syriac, so that everyone may hear the argument'. *Et quoniam in ea provincia pars populi et graece et siriate norit, pars etiam alia per se graece, aliqua etiam pars tantum siriate, itaque quoniam episcopus, licet siriate norit, tamen semper graece loquitur, et nunquam siriate: itaque ergo sicut semper presbyter, qui, episcopo graece dicente, siriate interpretatur, ut omnes audiant, quae expromitur* (cap. 47, pp. 261-2).

<sup>13</sup> *S. Ephraemi Syri Rabbarum Episcopi Edesseni ... opera selecta*, ed. J. Overbeck, Oxford, 1866, 160. On Greek Hellenism in the Eastern provinces: Liebermann, 1960<sup>2</sup>; Peters, 1930.

<sup>14</sup> Cf. Segal, 1953 (Jacob of Edessa's innovations: pp. 37-47). Greek loanwords in Syriac: Schall, 1960.

<sup>15</sup> de Lacy O'Leary, 1949, 71-2.

<sup>16</sup> Cf. Mitteis/Wilcken, 1912, pp. 87-8: during the Byzantine period Coptic gradually penetrated into public life; increasingly few people understood Greek, for instance, the bishop of Hermopolis, Abraham (± 600 A.D.), who had to dictate his testament in Coptic. In Arabic times the decline of the Greek language may be deduced from the language of the papyri (ib. p. 91); cf. Peters, 1930, 12-5; 27-32.

people; ■ the Alexandrian university, medical courses were always given in Greek.

It is significant that Greek materials remained available. Until the reign of the caliph 'Abd al-Malik (685/66-705/87) Greek remained the language of the administration and the tax-register (*diwān*) in Damascus.<sup>17</sup> As late as the 10th/4th century we find the historian Ḥamza al-Iṣfahānī (d. 961/350) using directly Greek historical materials concerning the Byzantine emperors with the help of a Greek-speaking servant at the court in Iṣfahān.<sup>18</sup> But, of course, it cannot be denied that Greek rapidly lost its significance as a medium of communication, and that the number of commentaries on the works of Aristotle in Greek decreased.

All the same, there were still people who had studied Greek according to the rules of Greek grammatical tradition, which had been formulated by many authors, beginning with Dionysios Thrax (± 170 ± 90 B.C.). At that time, Greek grammatical tradition was actually the only source of grammatical knowledge and study. The *Tékhnē* of Dionysios Thrax was translated at an early date into Syriac, according to the Nestorian tradition by Joseph of Ahwīz, who died before 580 A.D.<sup>19</sup> Quite fundamental was the work of Jacob of Edessa, who seems to have had a lasting influence on later generations of Syrian grammarians.<sup>20</sup> Some of these Syrian scholars studied Greek in Alexandria, for instance Sergios of Res'ainā (d. 536 A.D.), who wrote a commentary on Aristotle's *Categoriae*, and a treatise about the parts of speech,<sup>21</sup> and also the aforementioned Joseph of Ahwīz and Jacob of Edessa. We may, therefore, safely assume that there were translators with a good or reasonable knowledge of the Greek language far into Arabic times.<sup>22</sup> We may also assume that, unwittingly, the work of these translators and their methods were dominated by Greek linguistic methods, terminology, and categories. Thanks to these translators, a tradition was built up during a period of a few centuries, which served

<sup>17</sup> Hitti, 1968<sup>2</sup>, 217, used the anecdotic account with Balīdī, *Faḥḥ al-biddīn*, ed. Rikwān, Mar, 1958, 196-7: according to Balīdī the *anṣ* *al-dīn* took place in 700/81; the reason was that a Greek clerk had urinated in an ink-pot!

<sup>18</sup> Ḥamza, *Tarīḫ*, ed. Gottwaldt, St. Petersburg/Leipzig, 1944-48, (Bagdād, 1961) 70, 11 (*muḥ* *lafy* *ar-rāḥ*), cf. Waki's sources, B. 68, 4-5; cf. Rosenthal, 1968<sup>2</sup>, 74, n. 1; also pp. 91; 136-7.

<sup>19</sup> Mers, 1889, 9; Baumstark, 1968<sup>2</sup>, 116-7; 222; Georr, 1948, 5, n. 1.

<sup>20</sup> Mers, 1889, 34-101; Baumstark, 1968<sup>2</sup>, 246-56; Baumstark/Röcker, 1964, 191-2.

<sup>21</sup> On Sergios: Mers, 1889, 6; Baumstark, 1968<sup>2</sup>, 167-9; Georr, 1948, 17 sqq.; cf. b. n. Ummī's, 1, 109; 185-9; 204.

<sup>22</sup> Peters, 1968, 58.

as the foundation for the development of Arabic grammar. The story of the first Syriac translations of Greek writings has already been told several times, and we refer to the accounts by Baumstark and others.<sup>23</sup>

Returning to the origins of Arabic linguistics we may summarize ■ as follows. The different ■ about the first Basrian grammarian, Abū Ḥ-Aswad ad-Du'ālī (d. 688/69?), emphasize that ■ primary intention in 'inventing the art of grammar' was to prevent the corruption of the Arabic language in the mouths of the illiterate and the neophytes, especially, of course, where the text of the Qur'ān was at stake.<sup>24</sup>

A careful study of the sources reveals that, whatever the differences may be in details, they always connect the names of ad-Du'ālī and of the fourth caliph 'Alī ibn Abī Ṭālib (d. 660/40) with the *waḍ' an-naḥw*.<sup>25</sup> We do believe, therefore, that the tradition should be given credit, at least in the main point, namely that grammar was invented in order to save the Qur'ān from corruption. Wild's objection that there are hardly ■ quotations from the Qur'ān in the oldest lexicographical work, the *Kitāb al-ʾaḥ*, and that grammarians were not regarded as particularly religious scholars, is not valid, since it is based on later data.<sup>26</sup> Moreover, the development of lexicography should not be connected with the development of grammar. It is only natural for the early lexicographers to be interested more in rare words from classical poetry than in the comparatively normal vocabulary of the Qur'ān. The most important argument in favour of ad-Du'ālī's activities is the unanimity of the sources about the fact that he was inspired by the necessity to correct the various versions of the Qur'ān and to put a stop to the corruption of speech. As a matter of fact, it is typical of almost every grammar to be used originally as a means to preserve ancient or sacred literature, for instance, the Homeric epic in Greece, the Vedas in India, the sagas in Icelandic literature, and the Confucian texts in China.<sup>27</sup> The reason is, of course, that as the traditional texts

remained the same, and the colloquial language gradually changed, the danger arose of misunderstanding the (sacred) meaning of the old texts.

The corruption of speech in ad-Du'ali's time consisted mostly in a confusion of the case-endings. This explains why we find Abū 'l-Aswad mainly concerned with two problems: in the first place punctuation and the creation of a vowel-orthography—which he borrowed from the Syriac script—;<sup>28</sup> and in the second place the study of the *fā'il*, the *maf'ūl*, and the *nuḍāj' ilaihi* (or the *raf'*, the *naḥb*, and the *farr*), i.e., the case-endings.<sup>29</sup> The 'discovery' of the cases may well have originated with ad-Du'ali; the terminology was probably interpolated by later grammarians, who applied the grammatical *termini* of their own time to ad-Du'ali.

As for 'Ali's role: he is said to have instructed Abū 'l-Aswad as follows: 'Language is noun *ism* verb and particle; noun is what gives information about the nominatum; verb is that by which information is given; particle is what comes to a meaning'.<sup>30</sup> We do not know if there is any truth at all in this tradition; maybe we should ascribe it to Šī'ite partisanship, as Nöldeke does, with the traditions about 'Ali having been the first to collect fragments of the Qur'ān.<sup>31</sup> We certainly do not know whether this story may be connected with Greek influence—not even when we find 'Ali using at least one Greek word, namely the word *qāḥin* (i.e., Greek *kalón*, 'good!'), in the

conversation.<sup>32</sup> If we were able to go further back into the history of Arabic linguistics, and if we had reliable information about the way grammar was taught previously to al-Ḥalīl (d. 791/175) and Sibawaihi (d. 793/177), we could perhaps extend our conclusions concerning Greek influence to the first period of Arabic linguistics, but given the present state of knowledge this is impossible.

About the period following on Abū 'l-Aswad's activities information is almost completely absent, except for a few names of authors and titles of books, but at the time of al-Ḥalīl and Sibawaihi, about a century after Abū 'l-Aswad, we find an Arabic grammar that has reached a high stage of perfection. Nothing is left of al-Ḥalīl's own writings: the *Kitāb al-'ain*, the first lexicographical work of Arabic literature, was certainly not compiled by him alone, although he seems to have invented the system of arranging the radicals and the phonetic principles underlying this arrangement. His phonetic theories are probably due to Indian influence, and maybe we must also reckon with Syrian influence.<sup>33</sup> Ḥalīl's grammatical writings are lost, but according to Reuschel the grammatical system which is found in Sibawaihi's *Kitāb* is to a substantial degree Ḥalīl's.<sup>34</sup> It does not seem very probable *a priori* that this balanced system with its advanced terminology should be the result of a natural development in the course of less than one century. It has been objected that Sibawaihi lived too early to have undergone the influence of the translations of Greek writings; this is even more the case with al-Ḥalīl. But, true though it is, this argument cannot be used in favour of the independence of Arabic grammar, since there is another factor to be reckoned with. Everything points to the fact that these first real grammarians did not have anything to do with the Aristotelian logic of speech, but with the living practice of grammar which existed all over the Near East.

We do not agree with Madkour's statement that 'ces grands fondateurs al-Khalīl et Sibawayh vivaient au milieu du mouvement traducteur de l'Islam',<sup>35</sup> which is contradicted even by Madkour's own account of the history of the translations: he situates their apogee at the end of the 8th/2nd and the 9th/3rd century.<sup>36</sup> Besides, his

comparison of the grammatical *qiyās* with the logical syllogism is certainly wrong,<sup>37</sup> and the argument based on the division into three parts of speech, *ism*, *fi'l*, and *ḥarf* as compared with Aristotle's tripartition in the *De Interpretatione* is not decisive at all.<sup>38</sup> In our view, Arabic grammar was indeed influenced by Greek logic, but this influence took place at a much later date, when Baghdad had become the centre of Arabic culture.

When Merx in his *Historia artis grammaticae apud Syros* tried to prove the dependance of Arabic grammar on Greek logic, he used mainly terminological resemblances. His most important arguments were:<sup>39</sup>

1. the notion of declension and the term *i'rāb*
2. the division of words into three parts of speech
3. the distinction of two genders
4. the distinction of three tenses
5. the notion of *ḥarf* (local or temporal adverb)
6. the notion of *ḥāl*.

We believe that these arguments do not prove the influence of Greek logic, but contact with Greek grammar. The first two arguments will be discussed in the second chapter, as well as the fourth argument. The third argument is trivial. The case of the term *ḥarf*, which is traced back to Aristotle's *angelon* (vessel, jar), is stronger, and it does not seem possible to refute its value as an argument for the influence of logic on the beginnings of Arabic grammar. Still, the combination of time and place, which underlies Merx' identification of the two terms, is not typical of Aristotle alone, since it may also be found in Stoic theories, and is present in a Latin work about grammar.<sup>40</sup> It is therefore not too unlikely that somehow the word *angelon* came to be used in Greek grammar with the technical meaning of 'temporal or local adverb' (which envelops as it were the action taking place in it, just like a vessel does), which is the meaning of the Arabic word *ḥarf*, though not the meaning of the Aristotelian *angelon*, which means 'temporal or local circumstance'. Nevertheless, this is purely

hypothetical, and the fact remains that nothing much can be argued against Merx' identification. As for *ḥāl*, usually defined as 'condition, appearance of the active and the passive person',<sup>41</sup> this is compared by Merx to the *hēxeis kai diathēseis*, which in Aristotelian technical language mean 'permanent and temporary qualities and states'. But on the other hand, Merx himself tells us that the Arabic *ḥāl* corresponds to *didthesis* alone, so that the distinction between permanent and temporary qualities has disappeared. Besides, *ḥāl* has been connected by others with the Stoic *pōs échon*, one of the four Stoic categories.<sup>42</sup> There is also the possibility that the Arabic use of the word corresponds to the use of *didthesis* in Greek grammar, which not only means 'verbal voice', as Merx asserts,<sup>43</sup> but is also used for the verbal mood, i.e., for the expression of a mental condition (*psuchikē diathesis*).<sup>44</sup>

Our theory advocating a direct contact between Arabic grammarians and Greek scholars, possibly with the Syrians as intermediaries, is further confirmed by the history of Stoic influence on Islamic logic, theology, and philosophy. Most scholars assume a so-called *voie diffuse* to be responsible for those similarities between the two doctrines which cannot be explained by influence through translations of Greek writings.<sup>45</sup> This *voie diffuse* consisted in direct contact with the cultural centres of Hellenism, and especially with the monasteries and learned clergy.<sup>46</sup> This contact had been established even before the beginning of Islam, by those Arab tribes that had been christianized, and it was maintained on a much larger scale after the conquest of Egypt, Syria, and the other Hellenistic territories where Muslims and Christians had to live together in the same cities. We should keep in mind that the clergy were generally in charge of passing on and teaching literature and the sciences, and that they were trained in such disciplines as grammar and rhetoric. A typical case is that of Jacob of Edessa, who asks whether it is allowed for a Christian presbyter to teach Muslim children.<sup>47</sup> In later times, these

Christians came to Damascus and Baghdad, where they sometimes obtained high functions in the administration and in education.<sup>42</sup>

Not only the Christian clergy were active in this process: we must also reckon with the professional translators, who had to have a professional interest in grammatical matters. Ḥalīl has been mentioned as one of the teachers of the most important of all translators, Hunain ibn Ishāq, but this is contradicted by chronology: al-Ḥalīl died in the latest in 791/175, whereas Hunain lived till 873/260 or 876/263.<sup>43</sup> Nevertheless, Hunain had predecessors and other teachers, from whom he received his knowledge of Greek grammar.<sup>44</sup> One of the first translators was the Byzantine Roman Yahyā ibn Bitrīq, who lived during the reign of the caliph al-Manṣūr (754/137-775/159).<sup>45</sup> This means that Arabic linguists were or could have been acquainted with methods and rules of Greek grammar well before the times of, say, al-Māzinī (d. 863/249), the teacher of al-Mubarrad (d. 898/285). These methods were totally different from the logical theories of Aristotle, which were to have a considerable influence through the commentaries of Ammonius, Porphyrios, and others. In order to prove this difference we shall have to show that there is a fundamental difference between linguistic activity in the period of al-Ḥalīl and Sibawaihi, and that of later linguists, who were concentrated mostly in Baghdad. Then we shall have to prove that this difference may be explained in terms of a different foreign background, and that those foreign elements which may be found in the work of Sibawaihi and other early grammarians should be attributed to direct contact with living grammar, whereas later authors in the Baghdadian period underwent the influence of translated Greek writings.

An interest in grammar was to men like Sibawaihi and his immediate predecessors and successors not theoretical, but only a means to a single goal, substantially the same one as Abū l-ʿAswad had had, namely to create some order in the immense material of the Arabic

language. This they tried to achieve by means of a few fundamental notions, which very often were not defined at all, or defined in a descriptive way. The basis of their theory of language was the natural instinct as to the correctness of speech, which the pure Arabs were assumed to possess.<sup>46</sup> Many terms were used in a non-technical way, for instance the term *ism* (noun).<sup>47</sup> The notion 'verb' was described in the following way: 'As for the verbs, they are patterns taken from the expression of the events of nouns, and they are constructed to (signify) what is past and what is to come and what is being without interruption'.<sup>48</sup> This is not to be taken as a definition as, for instance, Zaḡḡālī seems to do—<sup>49</sup> but as a simple reminder of the fact that verbs are derived from the *masdars*, and that they occur in various forms which are expressive of tense; in other words, it is not a definition of the essence of the verb—such as we find with later grammarians—, but a description of something that happens in speech. Non-technical terms are found for instance in the chapters about the passive and about the various forms of transitivity.<sup>50</sup> Sibawaihi's *Kitāb* could be called a *divan* of all the curiosities and *naḥwī* of the Arabic language, but as such it operates on a very high and accomplished level, rarely attained by later grammarians. It is difficult to imagine that in the fifty or sixty years following Abū l-ʿAswad's first endeavours, Arabic grammar could on its own have assumed such large proportions without any foreign influence. The absence of Aristotelian influence should not be interpreted as an argument for the thesis that grammar was a purely Arabic science untainted by any foreign elements, nor is it surprising that there is no clear evidence of foreign influence, as long as we take the view that the first contacts with the Greek world were direct, as it were 'unofficial', contacts with the living instruction of grammar at the Hellenistic schools and universities.

In the following three chapters we will discuss some elements in Arabic grammar which we believe to have been coined on Greek

<sup>42</sup> On the position of Christians in the Islamic empire: Nau, 1933.

<sup>43</sup> Incorrect Bruckelmann, *OAL* I, 364; cf. Gabrieli, 1968, 283; Meisadich, 1926.

<sup>44</sup> The first group of translators was concentrated around Ibn al-Muqaffa' (*OAL* I, 158) in the reign of al-Manṣūr (754/137 - 775/159), and had connections with Christians from Harrān, the most important among them being ʿĪsā ibn Qurra (*OAL* I, 241; I, 384). The former was a pupil of Johannes Damascenus. Cf. Peters, 1968, 59-60. Peters mentions elsewhere (1968, 134, n. 136) a typescript thesis by G. Afandi, *La connaissance du grec par les philosophes islamiques*, which I have not been able to find.

<sup>45</sup> Cf. below, chapter IV, note 26.

<sup>46</sup> Cf. Mubārak, 1974<sup>2</sup>, 63-4 (*glaw al-ʿarab*); for the story about al-Ḥalīl's sources in the study of the 'def. of below, chapter IV, note 76.

<sup>47</sup> Sib. Kit. I, 2, 2: 'The noun is *naḥw* (man) and *farar* (home) and *ḥūr* (wall)'. Cf. Zaḡḡālī, *Id.* 49, 9-10 (without *ḥūr*).

<sup>48</sup> Sib. Kit. I, 2, 2-3 [A3]; cf. below, chapter III A.

<sup>49</sup> Zaḡḡālī, *Id.* 53, 1-5. Zaḡḡālī refers to his *Ṣaḥḥ ar-risāla* where he dealt with this question more fully. Nothing is known about this work except for what he tells us himself in the *Kitāb* (41, 11; 53, 5). On the *Risāla*: cf. below, note 78.

<sup>50</sup> Cf. Sib. Kit. I, 13 seq.

examples; these elements are: the terminology of articulated sound and of phonetic change; the term *ḥaraka* (vowel); the definitions of noun and verb; the paradigms for noun and verb; the theory of the parts of speech; the notion *ʿrāb*; the verbal tenses; the ~~theories~~ concerning the infinitive; the concept of transitivity; the system of the *uṣūl an-naḥw*. We wish to make clear from the start that we do not agree with Weiß's methodological remarks about the borrowing of systems or doctrines. Weiß vigorously opposes the thesis of Greek (and even Latin) influence on Arabic grammar, and states that it is methodologically wrong to look at one isolated term, since every term is part of a complicated system, without which it is meaningless.<sup>57</sup> One must, of course, concede that his opinion arises from the ~~fact~~ wish to prevent wild conjectures, but ~~his~~ appeal to the psychological improbability of the borrowing of single elements out of their context is contradicted by modern studies, notably by Burwick's studies ~~concerning~~ concerning the relationship between Greek and Latin ~~grammar~~. We firmly believe that one of the characteristics of grammatical systems is that each element tends to lead its own life outside the original framework. This is, indeed, the cause of such misunderstandings as arose—and still arise—in grammatical problems. We do agree, of course, with Weiß that one should not postulate a dependence on Greek sources without sufficient proof.

The current opinion about the dependency of Arabic grammar ~~on~~ Greek examples is expressed by Fleisch in the following words: 'Des influences grecques sont à signaler: la spéculation grammaticale arabe a emprunté des concepts initiaux à la science grecque, non pas à la grammaire grecque, mais à la logique aristotélicienne'; and: 'Ceci réduit beaucoup l'influence grecque; munis de ces concepts initiaux aristotéliciens, que la simple ambiance a pu leur fournir, les grammairiens arabes ont travaillé avec leur mentalité arabe; la description des catégories grammaticales est arabe; l'agencement en un système est arabe, si bien qu'on peut dire que, de toutes les sciences isla-

<sup>57</sup> Weiß, 1910, 389-90: 'Handelt es sich ~~um~~ wie bei der Grammatik und Philosophie um ein wissenschaftliches System, so erscheint von vornherein der Versuch, auf Grund bloß gelegentlicher Übereinstimmungen eine Beeinflussung nachzuweisen, als ein sehr wenig aussichtsreiches Beginnen, insofern die zahlreichen Divergenzen die eventuelle Beweiskraft der Kongruenzen gründlich paralisieren; denn man darf nicht übersehen, daß ein System ein Ganzes darstellt, und daß es psychologisch ganz unwahrscheinlich ist, daß ein einzelner Begriff daraus wie ein einzelner Block gewandert sein soll, ohne Spuren seiner nächsten Nachbarschaft mitzunehmen'.

miques, la grammaire est peut-être celle qui a le moins subi d'influences extérieures et est restée la plus purement arabe'.<sup>58</sup>

In the following chapters we shall try to show that there is more than one reason to reject, or at least to modify this theory, namely that all traces of Greek influence which may be detected in Arabic grammar should be attributed to Greek logic. It appears that the influence of logic was at first almost non-existent, or only filtered through to a small degree along the *voie diffuse*, i.e. via direct contact between translators and grammarians, whereas the real influence was exercised by Hellenistic educational institutes with their long-standing tradition of grammar-teaching. Sometimes, Syriac grammar must have acted as intermediary. Logic became important as Greek philosophical writings were gradually translated from Greek into Arabic, mostly indirectly via Syriac. Its influence came to be felt in linguistics with the rise of the so-called 'philosophical school', which has long been regarded as a special group of philosophically minded scholars who were also interested in grammar and language,<sup>59</sup> but which we believe to have been nothing more than the development of linguistics after the introduction of logic into the Arabic world under the influence of the Mu'tazila.<sup>60</sup> The rise of this 'philosophical school' coincides with the transference of the centre of linguistics from Baṣra and Kūfa to Baghdad. As for the first period of Arabic linguistics, the chronology of the translational activities compels us to reject any appreciable influence of logic before, for example, Ḥunayn ibn Isḥāq. This opinion is confirmed by the study of those linguistic elements which may be traced back to Greek grammar. Viewed in this light, the problem of the sudden appearance of a complete model of grammar with al-Ḥalīl and Sibawaihi ceases to be a problem: the Arabian conquest of the culturally superior civilization that was Hellenism, the geographical location of Baṣra and Kūfa near Hellenistic centres of education, the fact that there were many bilingual people, and the presence of some striking similarities between Greek and Arabic grammar, these are the main points of our evidence for the thesis of a direct contact between the first representatives of a new method of describing language and the last representatives of the old.

In two articles, *Les origines de la grammaire arabe* and *An Arab*

<sup>58</sup> Fleisch, 1961, 23.

<sup>59</sup> Kraus, 1942, 2, 251, n. 2.

<sup>60</sup> Cf. below, chapter VIII.

As for Carter's terminological arguments:

- ad 1. It is true that in describing linguistic facts Sibawaihi uses terms that are also used for moral categories; there may be a connection with the study of law, but we must also point out that in the Hellenistic and Byzantine periods there were many treatises about the *aretai kai kakiai tes lekxos* (virtues and vices of speech), i.e., about correct and incorrect speech. These treatises had been an integral part of the Stoic *technai*, and through the *technai* they were introduced into rhetorical education.<sup>70</sup>
- ad 2. The origin of the linguistic method called *qiyas* may well lie in juridical practice. We shall try to demonstrate the connection between the set of four criteria of scientific analysis in the Islamic world on the one hand, and on the other hand the method of the empiricist physicians in the Greek world.<sup>71</sup> Whether grammar obtained its kind of *qiyas* through law, or through another discipline, or even independently, is not very relevant. All the same, there is the matter of chronology: according to Schacht al-Sāfi' was the first to codify the juridical *uṣūl*, so that the question arises whether such a system could already have existed at the time of Sibawaihi. We would rather favour a dependency on medical studies in this respect.
- ad 3. The terminology of *maḥall* etc.<sup>72</sup> We agree with Carter that this set of terms is a genuine Islamic invention, but we do not know whether its grammatical application is really derived from the legal system.
- ad 4. Carter's assertion that such terms as *ṣarf* (condition), *ḥaṣḥ* (compensation), *ḥadal* (replacement), *ḥaḥḥ* (definition), *ḥaḥḥa* (argument), *niyya* (intention) — we might add the important term *ḥaḥḥ* (requital, recompense; in grammar: the protasis of a conditional period) — have a juridical flavour, is plausible enough in itself, but the argument needs to be developed more fully.

We cannot accept the picture of a spontaneous creation of the linguistic corpus at the hands of one man. The character of the oldest extant grammatical literature supports much more Sezgin's

<sup>70</sup> Barwick, 1922, 95-9; Donner, 1967, 154-6; cf. also Apoll. Dysk. index, s.v. *habib* (*moia dieris*). Quirk, *Int. gram.* 1, 5, 1: *virtues* vs. *virtu*. *Maḥall* may be related to Greek *arētēs*.

<sup>71</sup> Cf. below, chapter IV.

<sup>72</sup> Cf. for this terminology: Weil, 1913, 24, n. 3; Carter, 1973, 147-9; ■■■■■ chapter VII, n. 86.

conception of the history of Arabic scientific literature, 'wonach z.B. dem monumentalen grammatischen Werk von Sibawaihi eine vorbereitende Literatur vorangegangen sein muß und die umfangreichen Bücher von Historikern derselben Zeit, wie z.B. Ibn Isḥāq und Saif II. 'Umar, Kompilationen früherer Schriften darstellen und zahlreiche Qur'ankommentare des ersten Jahrhunderts der Hīra in den späteren Werken verarbeitet wurden'.<sup>73</sup> We assume that Sibawaihi borrowed a great deal from written sources, even if this borrowing took place under the supervision of a teacher. We do not possess much information about the organization and methods of instruction and education of the early grammarians, but we suppose that Sezgin's conclusions concerning the *muḥaddithūna* and the *mu'arrifūna* are also valid for the *naḥwīyyūna*. Some of the terms with which Sibawaihi introduces his quotations from earlier grammarians refer in that case to the modality of transmission, not to the value of the contents of the quotation.<sup>74</sup>

According to this conception the *naḥwīyyūna* who are mentioned by Sibawaihi — Ḥallī ibn Aḥmad, Yūsuf ibn Ḥabīb, Abū 'Amr ibn al-'Alī, al-Aḥfās Abū 'Ujāḥ, 'Isā ibn 'Umar a.o.<sup>75</sup> — should not be regarded as mere amateurs *WIKISOURCE* in linguistic curiosities. According to Reuschel a great deal of the facts and theories collected in the *Kitāb* are the result of a linguistic tradition, although it is true that Sibawaihi marks the culminating point of this tradition, and that he represents at the same time a remarkable technical innovation in grammatical description.<sup>76</sup> The difference between the *naḥwīyyūna* — experts in traditional linguistics<sup>77</sup> — and Sibawaihi is that Sibawaihi organizes the linguistic facts into a consistent whole. Reuschel refers to the fact that only in the first seven chapters of the *Kitāb* — the so-called *Risāla*<sup>78</sup> — does Sibawaihi not quote any of the older gram-

<sup>73</sup> Sezgin, 1967, 393.

<sup>74</sup> Cf. the table of the terms used by Sibawaihi in introducing a quotation from Ḥallī: Reuschel, 1959, 11; he suggests that the difference in the terminology is indicative of a different 'Wertung der Aussagen Ḥallīs', ib. p. 10, n. 2, but cf. Sezgin, 1967, 58-60; 77-9; 240-1.

<sup>75</sup> For these scholars, cf. Brockelmann, GAL I, 96-8; S I, 158-60.

<sup>76</sup> Reuschel, 1959, 7-8.

<sup>77</sup> Perhaps Carter's explanation of the term *naḥwī* in *naḥwīyyūna* as 'façon de parler' is correct, but he is not right in regarding the *naḥwīyyūna* merely as interested laymen.

<sup>78</sup> According to Moharak, 1963, 112-3, the *Risāla* comprises the first seven chapters of Sibawaihi's *Kitāb* (Kā 1, 1-13). Commentaries written exclusively on the *Risāla* are known from Zaggāgī (cf. above, note 55) and also from al-Aḥfās as-Saḥīr. Cf. the remark in an editorial note in one of the texts of the *Kitāb* (mentioned by de Sacy,

marians. This may be significant inasmuch as these first chapters discuss precisely the fundamental notions of grammar, and mark the beginning of a really technical grammar. In our view this achievement was partly influenced by the growing acquaintance with Greek grammatical practice.

On the other hand Carter is certainly right in supposing that the juridical system exercised a considerable influence upon the Arabic grammarians of this time, just as it is true that there has always been an intimate relationship between the two disciplines, especially in the discussions about the *usūl*, the *'illat*, the *qiyās* and other subjects that touch on the methodology of the discipline. However, in this case there is more a similarity in methods than a dependency of grammar on law.<sup>79</sup>

In our view Arabic grammar is far from being a slavish imitation of Greek grammar. What may be the most startlingly original trait of Arabic grammar is that it applies the theory of a natural balance (*miẓān*) to language; this results in a conception which views speech as a harmonious structure, in which every constituent part has its rightful place,<sup>80</sup> which it cannot lose without repercussions in the rest of the system, or without being compensated. This conception is not paralleled by any Greek theory. We refer to Weil's introduction to the *fiṣṣā'* for a discussion of the grammatical consequences of this theory, and to Kraus' study about Qābir ibn Ḥayyān for a discussion of the methodological background of the theory of the natural balance, as well as its sources.<sup>81</sup> We are fully aware that in trying to prove the presence of Greek influence we have given far too little attention to this and similar aspects of the originality of Arabic grammar.

1829, 382, line 19) that Ismā'īl al-Warrāq copied the *Kitāb* of the *Kutub*, as well as part of the *fiṣṣā'* (i.e., the *ḥab al-fī* if the eighth chapter) (*manāḥa min al-Kitāb al-ṣiḥḥ wa-ba'd al-fīṣṣā'*).

<sup>79</sup> Mohdarak, 1974<sup>2</sup>, 79-93.

<sup>80</sup> For the terminology of 'syntactic place': cf. chapter VII, n. 86.

<sup>81</sup> Weil, 1913, 7-28; Kraus, 1942, 2, 187-203 (*La théorie de la balance*); (ib. 187): 'La science de la Balance (*ʿilm al-miẓān*) a pour but de résoudre toutes les données de la connaissance humaine à un système de quantité et de mesure, leur conférant ainsi un caractère de science exacte'; cf. especially the sections 3 (la balance des lettres) and 4 (la philosophie du langage); Kraus refers to theories of Galenos and Plato as the sources of the *ʿilm al-miẓān*.

## CHAPTER TWO

### ARTICULATED SOUND AND ITS MEANING

'Most scholars agree in thinking fit to begin the study of dialectics with the subject of sound'<sup>1</sup>

In this chapter we will discuss a few aspects of the relation sound vs. meaning: the notion of a long vowel; the term *ḥaraka*; the theory that a change in the sounds of a word affects its meaning; and the terminology of articulated sounds and their meaning. The phonetic studies of the Arabs lie outside the scope of this chapter;<sup>2</sup> it has been suggested that the first classification of the Arabic sounds in al-Ḥallī's *Kitāb al-ʿayn* was due to Indian influence since a similar classification is used for the Indian alphabet.<sup>3</sup>

The relationship between the three vowels and the so-called *ḥurūf al-lin wa-l-madd*, i.e., the *alif*, the *wāw*, and the *yā* had already been recognized by early grammarians: according to Sibawaihi a word can go eight 'ways' (*maḡāriḥ*), in other words it may have eight different endings in declension. These eight endings form four pairs, because the *alif* and the 'a', the 'w' and 'u', the 'y' and the 'i' belong together; the fourth pair is formed by the nominal and the verbal zero ending.<sup>4</sup> There were two opinions as to whether the letters are original, or the vowels,<sup>5</sup> but the relationship between the two groups is acknowledged by both theories. The conception of a long vowel was fairly uncommon: vowels and *ḥurūf al-lin wa-l-madd* are related, but they do not belong to the same category. There is a third theory, which regarded the *ḥurūf al-lin wa-l-madd* as long vowels.

In his treatment of the declension of the dual and the plural, Ibn al-Anbārī does not mention the theory of Ṭa'lab, which is mentioned by Zakkārij in the same context;<sup>6</sup> Ṭa'lab held that the *alif*, the *wāw*, and the *yā* may serve as substitutes of the vowels (*abḡd al-ḥarakāt*):

<sup>1</sup> Diokles *Magnum op. Diag. Laert.* 7, 55 = SVF 2, 136 [G1].

<sup>2</sup> Cf. Schaade, 1911; Carttisson, 1960, 19-23; Braverman, 1934; Serrano, 1968.

<sup>3</sup> Cf. Wild, 1965, 37-40.

<sup>4</sup> Sib. *Kiz.* 1, 3, 2-3.

<sup>5</sup> Cf. Zakkārij, *Id.* 123, 9-11; *ib. Anb. Arc.* 127, 9-12.

<sup>6</sup> Zakkārij, *Id.* 141, 10-2.

in the plural *zaidāna* the *wāw* is the substitute of three 'u's. We do not believe that this is a mere formal or functional comparison between two elements of speech, such as we find in other chapters of Arabic grammar,<sup>7</sup> but we connect this isolated observation about Ta'lab's theory with other texts, and conclude that it forms part of a theory which differs from the general Arabic conception of vowels and letters.

Ibn al-Anbārī's second question in the *Inṣāf* deals with the declension of the so-called 'six words', *abun, ahun, etc.*<sup>8</sup> Ibn al-Anbārī quotes Māzini, who says that the series *abū, abā, ubi* is derived from the series *abun, ahun, ahin* by lengthening of the vowels (*alḥāf*). The Arabic term for 'lengthening' is normally used for a metrical phenomenon, namely the lengthening of a vowel in a line for metrical reasons.<sup>9</sup> But we could also say that Māzini departs here from the current Arabic conception: instead of 'long vowel = vowel + letter' he says 'long vowel = vowel + vowel', or 'long vowel = lengthened short vowel'. In that case 'u' comes from 'u + u', just as Ta'lab said.

There is proof that such a conception actually existed in the Arabic world, and, what is more, that it was explicitly connected with Greek theories. In the section about grammar in Ḥwārizmī's *Mafāṭih al-uhm* there is a chapter about the ways of declension 'according to the doctrine of the Greek philosophers' (*al-d maḥab falsafiat al-yunāniyyin*);<sup>10</sup> it is probably a quotation from the work of Hunain ibn Ishāq, who wrote about Greek and Arabic grammar.<sup>11</sup> Ḥwārizmī says that 'the logical scholars of the Greek people call the nominative an imperfect *wāw*, and likewise the "u" and her sisters ... and the "i" and her sisters are in their view an imperfect *yā'*, and the "a" and her sisters are in their view an imperfect *alif*. But if you wish to do so, you may also call the long, soft *wāw* a lengthened "u", and the long, soft *yā'* a lengthened "i", and the long *alif* a lengthened "a".'<sup>12</sup>

<sup>7</sup> For instance the article and the *ḥāf*, which have the same function, and may, therefore, take each other's place, i.e., they have the same *manāfi*, though not the same *manzila*.

<sup>8</sup> b. Anb. Inṣ. 6, 11-12, 25.

<sup>9</sup> The term *alḥāf* is explained by Ibn al-Anbārī, two of his examples are also found with Ibn Ḥalāl, Inṣ. 3, 136, 1, at a passage about the *alḥāf*-theory in connection with the declension of the dual and the plural. Possibly both authors quote from a work of al-Māzini.

<sup>10</sup> Ḥwāz. Maf. 46, 3-10.

<sup>11</sup> Cf. below, chapter VI, note 23.

<sup>12</sup> Ḥwāz. Maf. 46, 4-8 [A.4].

This quotation shows that the conception of long vs. short vowels instead of short vowels vs. short vowels + *alif*, *wāw*, *yā'* was felt to be connected with the declension and with Greek sources. Perhaps this may be explained in the following way: Arabic translators and logicians by virtue of their knowledge of the Greek language and of Greek grammar tried to improve the theories of Arabic grammarians by showing that the difference between *zaidun* and *zaidina*, and between *abun* and *abū* is nothing else than an alternation of long and short vowels. It is quite understandable that this 'improvement' was misunderstood in the course of time and became a separate type of declension, or was confused with a metrical phenomenon.

Ibn Ġinnī mentions as one of the reasons for the resemblance between letters and vowels that the vowel is a small letter (*ḥarf ṣagīr*): 'Don't you see that some people in the past used to call the "u" the small *nūn*, and the "i" the small *yā'*, and the "a" the small *alif*?'<sup>13</sup> The same terminology of the vowel as a 'small letter' is found in Sirāfi's commentary on the *Kināh*,<sup>14</sup> and with Ḡābir ibn Ḥayyān.<sup>15</sup> Bravmann mentions a phonetic theory according to which an *alif* is composed of two 'a's, a *wāw* of two 'u's, and a *yā'* of two 'i's, and *alif*, *wāw*, *yā'* are the result of pronouncing a vowel with *alḥāf*.<sup>16</sup>

Arabic philosophers use another terminology for the sounds, taken from Aristotle, who divides sounds into *phōnēnta*, *hēmiphōna*, and *aphōna*.<sup>17</sup> In this division there is a special category for the continuous sounds, the *hēmiphōna*, for which the 'r' and the 's' are given as examples. This terminology is found in Arabic translation, for instance in Ibn Sīnā, who divides sounds into three groups: voiceless sounds (*ṣawātār*), i.e. the consonants; semivoiced sounds (*allafī laḥā nif ṣawī*), i.e. the fricatives; voiced sounds (*muṣawwītār*), divided into long and short voiced sounds (*maḥdūda wa-maḡāira*).<sup>18</sup> In the last group the *maḡāira* are the vowels and the 'weak letters' (*ḥurūf al-illa*),

<sup>13</sup> b. Ġinn. Inṣ. 2, 315, 7-8 [A.5].

<sup>14</sup> Cf. Hegazi, 1971, 71-2, the passage from Sirāfi's *Ṣaḥ* is quoted by Muḥḥak, 1974, 118-9.

<sup>15</sup> Kinnas, 1942, 2, 244, n. 1.

<sup>16</sup> Bravmann, 1934, 13, quoting from 'Abī ibn Sahl al-Qūfī (d. 1014/1603), *Kitāb al-ṣawātār al-fāriyya 'alā maḥab al-ḡazaliyya*, ed. Cairo, 1908 A.H., p. 50.

<sup>17</sup> Aristotle, *poet.* 1456 b 24-30; cf. Strachal, 1890<sup>2</sup>, 1, 254 sqq.; Bravmann, 1934, VII-VIII, and note 2.

<sup>18</sup> b. Sīnā, *Ṣiḥ*, 191, 11-4.

i.e., the *alif*, the *wāw*, and the *yā*, and the *maddūda* are also called *maddāt*, i.e., probably the long vowels.

The theory of short vowels as 'small' (*ṣagīr*) or 'imperfect' (*naqīs*) letters is connected by Ḥwārizmī with the Greek world, so that we would expect the two terms *ṣagīr* and *naqīs* to be related with Greek terms. In Hellenistic Greek the opposition between long and short vowels, and between diphthongs and vowels, had completely disappeared, at least in pronunciation; in writing, the traditional orthography was strictly maintained.<sup>19</sup> Actually, the correct spelling of the vowels and the diphthongs formed an essential part of education and scholarship. For this purpose lists were made of words with their correct spelling, i.e. mainly whether to write 'o' or 'ō'; 'e' or 'ai'; 'u' or 'oi'; 'i' or 'ī' or 'ē' for instance in the Herodian *Epimerismoi*.<sup>20</sup> In the *Epimerismoi*, 'ei', 'i', and 'ē' are indicated by their names (i.e. *el diphthongos, iōta, ēta*). 'O' and 'ō' are referred to as a *mikrōn* (little o) and a *mega* (big o); 'e' and 'u' are distinguished from 'ai' and 'oi', respectively, by the addition *psilōn*, i.e. 'bare, naked, separated from, simple'.<sup>21</sup> Perhaps these terms *mikrōn* and *psilōn* are the originals of *ṣagīr* and *naqīs*. This could explain why we find a different terminology with Ibn Sīnā: he was dependent on Aristotle's terminology, which originated at a time when the original opposition between long and short vowels still existed.<sup>22</sup> Ḥunain ibn Ishāq and the other translators, however, learned the Greek language as a living language. Perhaps they took the terms for the written vowels and introduced them into Arabic grammar.

The Arabic term for vowel, *ḥaraka* (movement), has up till now been explained by only one theory, namely that of Bravmann.<sup>23</sup>

<sup>19</sup> Cf. Köhner/Blass, 1966<sup>2</sup>, I, 1, 41, Ann. 2; also Brouwag, 1969, 32-3.

<sup>20</sup> *Epimerismoi* *Psilōtismoi*. Ed. J. Fr. Brounag. London, 1819 (Amsterdam, 1963), cf. about the *epimerismoi*, Glöck, 1907, 35-40. These lists ultimately derive from an Alexandrian grammarian of the second century A.D., Herodianus, the son of Apollonius Dyskolos.

<sup>21</sup> Note that in the scholia on D.T. *psilōn* is used as the opposite of *anōte*, i.e. 'pronounced with a spiritus asper' (e.g. scholia D.T. 72-3); later *anōte*, a *melos*, a *psilōn* became *metos*, cf. Liddell/Scott, s.v. *anōte* and s.v. *psilōn*.

<sup>22</sup> Steinthal, 1891<sup>2</sup>, 2, 192 sqq.; 201.

<sup>23</sup> Bravmann, 1934, 12-8. We do not take into account the explanation mentioned by Rāzī (Maf. I, 48, 3-7): the voice moves from one sound to another in pronouncing a consonant with its vowel: a vowel is, therefore, a movement (*ḥaraka*). Rāzī himself disagrees, since it is not the vowel itself that is the movement. Cf. also Rāzī's *Alwān* ap. Sijū<sup>2</sup> (3, 136, 2): 'The movement (*ḥaraka*) is the transferring (sc. of the sound) from one place to another in a second time' (about the expression 'second time': Bravmann, l.c.).

According to Bravmann, *ḥaraka* is a term from musical literature: metre and rhythm consist in the alternation of consonants with and consonants without a vowel (*ḥarīf mutaharrika wa-sawākin*). Hence the original meaning of *ḥaraka* was 'syllable', where syllable is interpreted as consonant + vowel. The term itself is a *calque* of the Aristotelian *kinesis*, which is used in the *Physica* for a specific form of change, namely the realization of something potential.<sup>24</sup> In this context, the vowel is considered to be the necessary condition for the realization of the consonant. Fischer adds that in Greek poetical theory one of the primary characteristics of a syllable is its movability, i.e., the fact that it may be compressed or extended. According to him, this movability is also expressed by the Arabic term.<sup>25</sup> Both authors also point to a statement made by al-Sāḥibī (d. 1193/590), that the vowel is the accident (*arad*) and the consonant the substance (*ḍar*), where the vowel is defined by means of logical terms.<sup>26</sup> The fundamental failure of this theory is that it does not take into account historical context. Sibawaihi used the term *ḥaraka* long before Aristotle's *Physica* became known in the Arabic world in the translation of Ishāq ibn Ḥunain. We must also point out that, as far as we know, nowhere in Greek logical or musical literature is *kinesis* used with the meaning of 'vowel'.

We propose to give another explanation with the help of Greek data. There is a striking terminological similarity between Zaggāgī's *waḥḥ*: 'It (sc. the declension) is a vowel that enters speech after the completion of its phonetic structure' (*hiya ḥaraka dāḥila 'alā 'l-kalām ḥā'do kamāli bina' (hi)*),<sup>27</sup> and a text in the scholia on Dionysius Thrax where a grammatical case is defined as 'a movement that occurs at the end of a noun' (*anōteias kata sō telos ginomēnē kinesis*).<sup>28</sup> That

<sup>24</sup> Aristotle *phys.* 201 b 4.

<sup>25</sup> Fischer, 1964, 146.

<sup>26</sup> Quoted by Bravmann, 1934, 13.

<sup>27</sup> Zaggāgī, *Id.* 72, 2-3.

<sup>28</sup> Scholia D.T. 383, 3-4; 550, 24. cf. also *prolegomena*, XLI, 2, and *Grammatical* *Gramm.* IV, XXII, 12. Note the similarity between *bina'* (phonetic structure, originally: construction) and *anōteias*. The Greek word has among its significations also that of 'the internal phonetic structure', e.g. as the title of a book written by the grammarian Herodianus *Peri anōteias sōn stoicheiōn* (About the phonetic structure of the elementary words), and especially in a phrase used by Apollonios Dyskolos 'the structures resulting from these (sc. from the syllables) ... complete the word' (Apoll. Dysk. *Synt.* 2, 7-8. About *anōteias*: Doeges, 1967<sup>2</sup>, 23-30). We may also quote another phrase from the same author 'Every undecomposable part of speech has one and the same structure (*anōteias*) in each gender' (Apoll. Dysk. *syntax.* 316, 8-9; cf. *syntax.* 468, 5-6). In later Greek, *anōteias* is also used with the same concrete meaning as *bina'* (possessor in

*haraka* and the grammatical term *kinésis* are related may also be deduced from another parallel: the Greek word *kinēsthai* is used in the sense of 'to be declined',<sup>39</sup> and the word *akinetos* sometimes has the meaning 'undeclined';<sup>40</sup> in Arabic we find the word *mutaharrak* (set in motion) with the meaning 'declined'.<sup>41</sup> That this word was already used at an early time is proved by a quotation from al-Hafīf: 'Al-Hafīf was asked about the nominative, why it is used for the agent, and he answered: the nominative is the first "movement", and the agent is the first "moved", and so they used the first movement to indicate the first moved'.<sup>42</sup> This text also shows that the notion of movement was really felt to be connected with the declension.

It is not so strange that the word for vowel should be derived from the theory about the declension, if we consider that the primary motive of the Arabic grammarians was to preserve the Qur'ān from corruption. This corruption was mostly the result of a wrong use of the case endings: we fully appreciate this when we read the stories about Abū 'l-Aswad ad-Du'ālī.<sup>43</sup> *Haraka* as an equivalent of the Greek grammatical term *kinésis* was then originally the vowel *par excellence*, namely that vowel which indicates the cases: hence it came to be used as a general term for vowel. Elias of Tishān, a Syrian grammarian (d. 1049/441) defines grammar as 'the knowledge of the movements of the nouns, the verbs, and the particles'.<sup>44</sup> Even if the Syriac word *zaw'd* or *mettezi'ānā* (movement) is a *calque* of the Arabic term, and even a translation of the Greek *kinésis*, Elias' definition still proves that there did exist a definition of grammar in terms of movements, i.e. the case endings.

It is quite understandable that the term *haraka* was taken by later grammarians to indicate a real movement, for instance in the explan-

tion of the names of the cases.<sup>45</sup> They may have been influenced by the fact that vowels were also called 'voiced' (*muṣammātāt*),<sup>46</sup> and that a sound, according to Stoic doctrine, is a body because it moves.<sup>47</sup> The ultimate consequence of this interpretation is found in the writings of the Hebrew grammarian Marwān ibn Qanāh, who compares the vowels to the three principal movements in the physical world, and classifies them accordingly.<sup>48</sup>

In the introduction of Weil's edition of Ibn al-Anbārī's *ḥaṣf* there is a long excursus about the various phonetic rules which were used, especially by the Bagrians, to explain changes in words, and deviations from the norm. These phonetic rules were axiomatic and they were accepted as an ultimate explanation of phonetic change.<sup>49</sup> Three procedures are mentioned by Weil: change of a letter (*qalb*), metathesis (*naql*), and elision (*haḍf*). A fourth procedure certainly existed: the addition of a letter (*ṣyāba*).<sup>50</sup> This system of phonetic rules is called *ṣāḥ*,<sup>51</sup> i.e., an affection of the word, a deformation, which makes the word 'ill', as it were; essentially ill is an offence against the laws of speech, against the harmony that ought to reign in linguistic structure—which is evidently thought of as an organic whole. Such affections are allowed in the case of poetry, when a poet has to change the form of a word for metrical reasons.<sup>52</sup> But apart from poetry, such an offence can be tolerated only when there is a very good reason for a phonetic change, for instance when a change will make the word easier to pronounce. Even then, the change remains an 'illness', which makes the word unfit to be used in a grammatical analogy: the word remains a deviation from the norm. A word which

<sup>39</sup> Zagg. 1d pp. 93-4.

<sup>40</sup> b. Saq. 5r, p. 31.

<sup>41</sup> SVT 2 140, this doctrine was known to the Arabs through the translation of the *Placita Philosophorum*, ed. Diels, pp. 278-80, cf. below, notes 44, 69, 70.

<sup>42</sup> Bacher, 1970, 9. Ibn Qanāh, *Opuscula*, 275-6; cf. Chomsky's notes on Kimbī's *Mathal*, p. 12, n. 12.

<sup>43</sup> Weil, 1913, 10. 'Die Gesetze der Lautphysiologie, die die Araber schon früh aufgestellt haben, gelten als unbedingt gültige Erklärungen von Abweichungen'.

<sup>44</sup> Cf. for instance the *ḥaṣf* *ṣyāba*, the additional letters. Ibn Qanāh uses this category to explain the 'n' in the word *ṣaḥr*, which is derived from the radicals 'ḥ-r. (Bach. 3, 66).

<sup>45</sup> Cf. Zagg. 1d pp. 60, 4-5; 11-2: *qalb*, *naql* and *ṣyāba*, *ṣāḥ*. Ibn Qanāh uses the expression *ṣāḥ* *ḥ-r* *qalb* (an illness as the result of a change), Bach. I, 377, 17-8; *ṣāḥ* *ḥ-r* *haḍf*, ib. 2, 155, 7.

<sup>46</sup> This is called *ṣawā* (Weil, 1913, 28); e.g. b. Arb. 103, 9; 228, 18. In classical literature we find the term *ḥawā* for the same phenomenon, e.g. Qunūl. 104 1, 6, 2.

Arabic, for instance in an inscription from Ephesus 'the construction of the door-way' (*hō aintatōr tōō peritōpōr*), Liddell-Scott, s.v. Note also the similarity in meaning between the Greek word *telos* and the Arabic word *ḥawā* (completion). The word *ḥawā* was already used for related words such as *telōs*, *erzelenen* (Daher, 1968, 77), and a confusion between *ḥawā* = end and *ḥawā* = fulfilment is easy to imagine.

<sup>39</sup> Scholia D.T. 230, 26; Sophr. in Theod. 2, 412, 37-8.

<sup>41</sup> 'Abd al-Gabbār, *Mughnī*, 7, 205, 13: Abū Ḥātim is quoted as saying *mutaharrak* *ḥ-r* *ḥawā* *an-nawā* (set in motion by the nominative or the accusative or the genitive).

<sup>42</sup> Al-Hafīf op. [Zagg. 1d], 253, 12-4 (A 6).

<sup>43</sup> Cf. above, ch. I, note 24, and e.g. Zagg. 1d pp. 89-90.

<sup>44</sup> Meier, 1889, 155.

is not affected by any of these changes is called 'sound' (*phōnē*). In Syriac grammar the same terminology exists. We find there a distinction between words which are sound (*hūmā*), and words which are ill (*krihā*), just as in Arabic grammar.<sup>42</sup> It is our contention that Syriac and Arabic terminology were influenced by a similar doctrine in Greek grammar. In that case, of course, the Syrians played an intermediary role in the contact between Arabic and Greek grammar.

In Greek grammar we are frequently confronted with the doctrine of the 'affections of speech' (*pathe tēs lēxeōs, tēs phōnēs*), which describes phonetic change in words in terms of four categories. These categories were borrowed from the Peripatetic terminology of physical change, which distinguished between four categories: addition (*prōsthesis*), elision (*aphairesis*), transfer (*metathesis*), change (*enallage*). It is no coincidence that these were borrowed by Stoic philosophers, since Stoic philosophers tended to compare linguistic facts with parallels from the physical world.<sup>43</sup> The same tendency existed in Bagrian grammar: speech is the mirror of the physical world, the same laws apply therefore to both speech and nature.<sup>44</sup> This specific conception of speech as a replica of nature—which in the case of the Stoics was caused by their materialistic philosophy: speech is part of the physical world, sound is a body<sup>45</sup>—resulted in both grammars in the same terminology: *pathe* and *thal* are related in meaning. In both Greek and Arabic grammar it was customary to regard a word which did not undergo any change at all as being 'sound', i.e. not affected by any alteration.<sup>47</sup>

The Stoic method of analyzing phonetic processes is also used in Latin grammar, which provides us with a few more details. Varro

says: 'For (changes) are caused by the elision or the addition of letters, and also by their transposition or their change, likewise by the lengthening or shortening of syllables, and finally by their elision or loss'.<sup>48</sup> The Stoic origin of the system is also proved by Varro's remark: 'Chrysippos and Antipatros ..., who both write that words are derived from other words in such a way, that some words take on letters, other words drop them, still other words change them'.<sup>49</sup> The conception of phonetic laws as physical events which come about in a mechanical way, is of course older: we find it already in Plato's *Cratylus*.<sup>50</sup>

There is another, later, development of this doctrine in Greek grammar, which is usually connected with the name of the grammarian Tryphon, who lived in the first century B.C.<sup>51</sup> He used the same categories as the Stoics did,<sup>52</sup> but he connected a change of sound with a corresponding change of meaning: the sounds suffer together with the meaning, as he put it: 'Limos (famine), the lacking of provisions. *Limos* comes from the verb *leipō* (to leave behind), future *leipōs*; it should have been written with a diphthong (sc. *leimōs*), but the same happened to the sounds as to the meaning. The word indicates a lack, and that is the reason why it lacks a sound as well. Thus Tryphon'.<sup>53</sup> We may compare with this the words of the scholiast on Dionysios Thrax: 'The form *epoimēn* (I was doing) contains more of the past than the form *poimō* (I do)'.<sup>54</sup> Here the additional 'e' in the imperfect tense is explained from the grammatical meaning of the word. The difference

<sup>48</sup> Varro De L.L. 5, 6: *Edictum enim fit deiectione aut additione et prout varum transpositionem aut commutationem, item syllabarum productione aut corruptione, denique subtractione aut derelictione*; cf. Quint. inst. 1, 5, 6 where the categories are listed as follows: *ablatio, detractio, immutatio, transmutatio*.

<sup>49</sup> Varro De L.L. 6, 1 = SVF 2, 154: *Chrysippos et Antipatros ..., qui omnes verba ex verbis sic declinari scribunt, ut verba litteras alia assumant, alia mittant, alia commutent...*

<sup>50</sup> Plato, *Crat.* 394 B (C2): 'In the same way, perhaps, the experts of words consider their power, and he is not disconcerted, when a letter is added or transferred or taken away, or when the power of the word finds its expression in completely different letters', cf. Gentili, 1961, 112 sqq.

<sup>51</sup> Steinthal, 1890<sup>2</sup>, 1, 346 sqq. An edition of Tryphon's fragments has been published by A. de Velous in 1853 (1965). According to others the theory is much older, Barwick, 1957, 57.

<sup>52</sup> According to this theory, words may change by addition (*prolaxismos*), elision (*ampholoxi*), change (*metabolē*), or transposition (*anapē*). Tryphon uses the term *pathe* for these phenomena, e.g. frg. 131, pp. 97-8.

<sup>53</sup> Tryphon, frg. 130, p. 97 (C3); another example, Barwick, 1957, 56-7.

<sup>45</sup> Cf. above, note 44; below, notes 69, 70.

<sup>47</sup> E.g. Theodosios, 14, 4: 14, 10 *qawāḥ*; Apoll. Dysk. adv. 156. 11; 160. 3; 200, 22 *hagīr* (phonetically correct).

with ordinary sound symbolism is that this doctrine of Tryphon does not explain the meaning of a word by means of the sounds of that word, but that it seeks to give an explanation of the change of one form into another in terms of the change in meaning. There is, of course, a certain relationship with the doctrine of the significant value of sounds, as it is found in the *Cratylus*, in so far as each sound is believed to contribute to the formation of the meaning.<sup>37</sup> Both doctrines are found in Arabic grammatical works. In Ibn Ġinnī's *Ḥaṣā'is* we find three chapters that deal with the subject of the relations between sounds and meaning: 'Chapter on sounds that follow the meaning',<sup>38</sup> 'Chapter on the strength of the sound as corresponding with the strength of the meaning',<sup>39</sup> 'Chapter on sounds that imitate the meaning'.<sup>40</sup> Ibn Ġinnī says: 'As for the correspondence between the words and those events that are symbolized by their sounds, this is a large subject ..., namely that they (sc. the Arabs) very often make the sounds of the letters correspond to the events expressed by those letters. They treat the events and the letters alike, and they try to imitate the events with the letters'.<sup>41</sup> Suyūṭī quotes these remarks about sounds that imitate the meaning of the word,<sup>42</sup> and in the same context he also deals with the theory of 'Abū Ḥādī ibn Sulaimān, according to whom there is a natural relationship (*muwāḍaʿa ṣabṭiyya*) between words and meanings;<sup>43</sup> this brings us to the theories concerning the origin of speech and the epistemological value of words.

A good example of the way in which Ibn Ġinnī's theory about the correspondence between sound and meaning operates is that of the words *ḥaḍm* (to eat) and *qaḍm* (to crunch something dry): 'An example of this are the expressions *ḥaḍm* and *qaḍm*, because *ḥaḍm* is used for eating fresh herbage ... and *qaḍm* for eating something hard and dry ... They chose the letter 'ḥ' to indicate the softness of the fresh herbage, and the letter 'q' to indicate the hardness of the dry things, in order to imitate the sounds which are heard when we observe these actions'.<sup>44</sup> Here we are dealing with ordinary sound symbolism, very

similar indeed to the remarks made by Sokrates in the *Cratylus*, but the doctrine is also used for grammatical purposes. In that case we are not comparing two words on the same level, but one primitive, original word, and a secondary form that is derived from it. A good example of this is the explanation of the reduplication of the second radical of a verb as a sign of the repetition of the action expressed by the verb.<sup>45</sup>

It goes without saying that such a theory is founded on the belief that words are not arbitrarily chosen, but that they actually express the essence of the things denoted, in other words, that every word is 'invented' (*waḥḍa*) for a specific reason, and that there is a natural relationship between words and objects.<sup>46</sup> When a word is changed after the first imposition (*awwal al-waḍ'*), this indicates a change in meaning, and this change must be explained, otherwise the change of the sounds could not be justified. Sometimes we find the argument of the 'frequency of use' (*kaḥr al-istimāl*) as an explanation of the change of a word, but this argument was not accepted by all grammarians.<sup>47</sup>

The conclusion of our discussion is that Greek grammarians with their etymological theories exercised a certain influence upon their Arabic colleagues, who developed the theory in their own way. Probably the structure of the Arabic language, with its clear-cut patterns, helped the Arabic grammarians considerably in their efforts to build up a system of rules that could explain the changes in sound occurring in actual speech. In building up this system they made use of the principles they had received from Greek grammar. Our thesis is that this influence was already being felt at the time of Sibawaihi, in view of the fact that Ibn Ġinnī mentions al-Ḥalil in his chapters about sounds that imitate the meaning of the word. In the phonetic chapters of Sibawaihi's *Kitāb* the term *mu'tall* is already a frequently used technical term, and it is also used by al-Ḥalil, according to one tradition.<sup>48</sup>

The terminology of sound and its relation to meaning is of great interest to a better understanding of the views of Arabic grammarians.

<sup>37</sup> Cf. Sokrates' remarks concerning the value of the various sounds. *Crat.* 426 C-427 D; cf. Steinthal, 1890<sup>2</sup>, I, 129.

rians;<sup>67</sup> it also gives us the opportunity to illustrate their relations with the Greek world. We will discuss below the opposition *ma'nā/lafz*.<sup>68</sup> here we will occupy ourselves with the term *ḥawā* (sound) and the classification of sounds—not, though, according to their various phonetic properties, but according to their semantic value.

First we must consider the Greek data, which we assume to represent to a large degree the Stoic theory. According to the Stoics sound is a body,<sup>69</sup> which comes into being as the result of a percussion of the air: 'Sound is air which is struck, or (it is) what is perceived especially by the ear, as Diogenes the Babylonian says in his treatise about sound'.<sup>70</sup> The most important subdivision of sounds was the division into sounds produced by an act of will (i.e. human speech), and sounds which are produced instinctively (i.e. sounds produced by animals). Only the first group of sounds may receive the attribute 'meaningful' (*semantikós*). It goes without saying that human speech is always articulated and that it can be written (which in Stoic terminology amounts to the same thing).<sup>71</sup> Animal sound, on the other hand, is never a carrier of meaning, even though it may be considered *ἡμιῶν* in times.<sup>72</sup> Moreover, there are sounds which are produced in *ἡμιῶν* of meaningless and unarticulated noises, which *ἡμιῶν* be written down (i.e., the sounds proper, produced by inanimate objects): 'The sound of an animal is air which is hit instinctively, (the sound) of a man is articulated and intentionally pushed out, as Diogenes says'.<sup>73</sup> 'Speech, according to the Stoics, as Diogenes says, is a sound which can be written down, like *ἡμέρα* (day); language is meaningful sound, which is intentionally produced, like *ἡμέρα εἶναι* (it is day) ... Sound differs from speech, because sound may also be a noise, but speech can only be something articulated. Speech differs from language, because language is always meaningful, whereas speech, unlike language, may also be meaningless, like *blürrr*'.<sup>74</sup>

<sup>67</sup> Cf. also Loock, 1963, 263-4; 201-2.

<sup>68</sup> Cf. chapter X.

<sup>69</sup> SVF 2, 140-2; 3, 213, 2; cf. scholia D.T. 181, 4 sqq.; SVF 3, 212, 29 sqq.

<sup>70</sup> SVF 3, 212, 23-5 [G5]; cf. SVF 2, 138; 139; 142; Sen. Quaes. nat. 2, 6.

<sup>71</sup> Barwick, 1957, 11; Steinthal, 1890<sup>1</sup>, 1, 291; Diomedes, 2, 413 ed. Keil.

<sup>72</sup> Even about the articulateness of animal sounds there existed some disagreement, cf. SVF 2, 135; 2, 734, and Pohler, 1939, 194, note 1. The speech of animals formed one of the basic issues in the discussion about the 'inner' and the 'outer' speech (cf. chapter X, note 18). Most of the later Stoics conceded that, for instance, parrots do have a voice which can produce articulated noises, but according to Stoic doctrine animals can never communicate a meaning.

<sup>73</sup> SVF 3, 212, 23-7 [G6].

<sup>74</sup> Bk. 213, 5-21 [G7].

In the scholia on Dionysios Thrax we find a schematic elaboration of this system: 'articulated' is used in the sense of 'meaningful',<sup>75</sup> and a new category is added, consisting of those sounds which can be written down: 'Let it be known that some sounds are articulated and have a spelling, like our own; some of them are not articulated, nor can they be spelled, like the crackling of a fire or the sound of a falling stone or a piece of wood; some of them are not articulated, but they can be spelled, like imitations (of the sounds) of irrational animals, e.g. *brekekér* (sc. the sound of a frog), or *koí*, the sound of a pig; the sound itself is not articulated, in so far as we do not know what it means, but it does have a spelling, in so far as it can be written down; still other (sounds) are articulated, but they do not have a spelling, such as the sound of whistling: the sound itself is articulated, in so far as we know what it means—for instance "and whistling he gave a sign to the brilliant Diomedes (Hom. K. 502)"—, but it has no spelling in so far as we cannot write it down'.<sup>76</sup> Because of the synonymy of 'articulated' and 'meaningful' there is no place in this classification for the articulated speech of some animals, e.g. parrots, which is meaningless in spite of its articulateness. Imitations of the sounds of animals appear as meaningless sounds with a spelling, which is quite reasonable, when we consider the fact that 'with a spelling' (*εἰς γράμματα*) only indicates that such and such a sound can be reproduced in writing with normal letters. The category of 'whistling'—i.e. a sound which is articulated, but does not have a spelling—may be explained as a misunderstanding on the part of the scholiast: what he meant to say was that the sound of whistling cannot be reproduced in writing, but that the word which is used to indicate this sound is meaningful; he then confused the two statements, thereby completing his classification.

A similar division of the sounds is adopted by Ammonios, but he uses 'articulated' again with the sense of 'writable', in accordance with the Stoic use.<sup>77</sup> He says: 'It follows that some sounds are meaningful,

<sup>75</sup> Scholia D.T. 181, 23-7.

<sup>76</sup> Bk. 18-27 [G8].

<sup>77</sup> Amm. comment. in Aristot. de interpret. 31, 3-5 ed. Weiss; also Joh. Dam. D., 5, 1-27; cf. Zirin, 1974, who translates *εἰς γράμματα* with 'not resolvable into discrete units of speech-sound', identifying the *γράμματα* with phonemes. We agree, but have retained the translation 'not having a spelling' in order not to confuse the terminology. As a matter of fact, we may safely state that prior to the beginning of phonology only phonemes were used and (implicitly) known; the real discovery of phonology has been that the chain of phonetic events was endless and variable. In order to reestablish a

while they can be written down, like human speech; some sounds are meaningful, though they cannot be written down, like the barking of a dog; other sounds are meaningless, but they can be written down, like the word *blitari*; still other sounds are meaningless and they cannot be written down, like a whistle which is produced for no reason at all and not for purposes of communication, or like the imitation of the sound of some animal.<sup>78</sup> We observe in the first place that Ammonios attributes to dogs a meaningful, though not 'writable' sound, unlike the Stoics, who grant to animals at the utmost an articulated, never a meaningful speech. This is, however, in accordance with the Peripatetic doctrine that animals, too, use their voices to express a meaning.<sup>79</sup> But when we try to imitate these animal sounds, they remain sounds which cannot be written down, and which, moreover, lose their original meaning. In the second place, we find that Ammonios' primary division is made into meaningful and meaningless sounds. This brings words like *blitari* into another category than human speech.

The Stoic opinion that sound is a body, is found in the Arabic translation of the *Placita Philosophorum*.<sup>80</sup> This materialistic doctrine was taken over by Naẓām (d. 231/846),<sup>81</sup> a Mu'tazilite whose affinity with Stoic philosophy in various respects has been demonstrated by Horowitz.<sup>82</sup> The Stoic definition of sound as the result of a percussion of the air is found in a number of authors in the Arabic world, who have in common that they used Greek logical and physical theories: Ibn Sīnā, the Iḥwān al-Ṣafā', and 'Abd al-Gabbār.<sup>83</sup> 'Abd al-Gabbār also gives us his ideas about the classification of sounds: 'The principle of this chapter is that sound in general is produced in different ways: it may be produced as sound proper,<sup>84</sup> not articulated:

sound basis for the study of these events it was necessary to formulate exactly and explicitly the operational function of the phoneme. It is, of course, absurd to suppose that, prior to modern enlightenment, all grammarians confused letter and sound, cf. Caron, 1947. A very good analysis of the medieval concept *littera* in Brecklinson, 1972, 41-86.

<sup>78</sup> Amm. comment. III Aristot. de interpret. 31, 12-6 (G 9).

<sup>82</sup> Horowitz, 1903; 1909, 8-33.

<sup>83</sup> b. Sīn. op. 832, Ma' 1, 29, 3-4; Rasū'ī, 3, 123, 10-1; also p. 137; 'Abd al-Gabbār, Muḡnī, 7, 12, 7-8.

<sup>84</sup> Correcting tentatively *ṣawfīd* into *ṣawfayyad*, cf. below. *Ṣawf* *ṣawfayyad* should be translated by 'specific sound'; *ṣawfayyad* is synonymous with *ṣawfayyad*, cf. b. Aḥd. lan. 103, 7.

it may be an articulated sound in general; and it may be articulated, and then either be connected or interrupted;<sup>85</sup> it may be produced to form one or more letters, but sometimes it is produced as something which cannot be described thus, for instance the creaking of a door: even though it consists in something with the same nature as some of the letters, it is only recognized as such when the sound is produced in a place with a definite acoustic structure, such as the structure of the mouth.<sup>86</sup> There is also a remark about the speech of birds: 'Therefore (sc. because it is meaningless), the speech of birds is not called language, even though it consists sometimes in two or more letters in a definite order'.<sup>87</sup>

To begin with his last remark about the speech of birds: 'Abd al-Gabbār apparently agrees with the Stoics that animals can imitate human speech, and that, therefore, their speech can be written down and is also articulated.<sup>88</sup> This speech, however, can never be meaningful (*maḥṣūl*), since animals do not possess reason.

The rest of the sounds are divided into sounds proper, which cannot be articulated, and articulated sounds, which may or may not have a spelling. Our emendation of the text seems to be unavoidable, because if language alone is meaningful, and if language consists in letters in a definite order,<sup>89</sup> and if these letters have to be articulated sounds, then a sound which is not articulated, but does have a meaning, is hardly conceivable. The examples of the two subdivisions of the articulated sounds—those which have a spelling, and those which cannot have one—are the same as in the scholia on Dionysios Thrax: on the one hand we have human speech, which can be written down, and on the other hand we have a sound which as a sound cannot be written down, but as the word which denotes that sound, is articulated, i.e. meaningful. In both cases the misunderstanding arises from the confusion between the sound and the word that denotes it. The expression 'a definite acoustic structure' is matched by the Stoic descriptions of the nature of sound and speech.<sup>90</sup>

<sup>85</sup> For an explanation of these terms: Rasū'ī, 3, 137, sqq.

<sup>86</sup> 'Abd al-Gabbār, Muḡnī, 7, 6, 16-7, 2 [A 9].

<sup>87</sup> Ib. 6, 14-1 [A 10]. The 'speech of birds' (*ṣawfayyad al-ṭayr*). Qur'ān, 27/16.

<sup>88</sup> If sounds can be written down, they are also articulated, cf. Muḡnī, 7, 11-2. '... (speech) cannot be letters unless definite order, without at the same time being articulated sounds' [A 11].

<sup>89</sup> Muḡnī, 7, 6, 11-2.

<sup>90</sup> Cf. SVF 2, 44, 15-6; 2, 227, 35-7; 2, 258, 32 sqq.

A sentence which contains everything it needs, a complete sentence, is called *muṣṭafī*; only *kalām* can be called *muṣṭafī*, unlike the *qawl*, which may be *gair muṣṭafī*.<sup>102</sup> In this sense, *muṣṭafī* is equivalent to the Greek term *autotelēs*, which is used to indicate the quality that separates *lêxis* from *lôgos*. The literal meaning of *autotelēs* is something like 'self-accomplished, complete in itself, realized by itself'.<sup>103</sup> The product of a *muṣṭafī* sentence coming from a *muṣṭafī* person, *ma*, in other terms, the result of the process of *ijāda* is the *fā'ida*. *Fā'ida* is the meaning of the sentence, which can only be conveyed by a complete sentence, not by a string of loose words. Completeness should be understood in this context as syntactic completeness: the verb and the agent are the minimum constituents of an independent sentence. *Ma* makes a complete sense.<sup>104</sup> In Greek grammar this complete meaning is called *autotēleia*.<sup>105</sup>

The tenth form of the verb, *istafāda*, means 'to receive, to acquire', for instance 'with the "m" and the *wāw* of the form *maṣ'āl* you obtain a spell-like meaning (*tastafādu bi-mīm maṣ'āl wa-wāwihī ma'nān mahṣārān*).<sup>107</sup> The meaning resulting from this is *muṣṭafād* (realized, acquired, complete). Goichon translates 'c'est ce qui est donné par le *muṣṭafī* et acquis par le *muṣṭafī*'.<sup>108</sup> It indicates what is received from outside, and what completes and realizes a potential quality: (Ibn Sīnā) 'things imagined by the mind, under the influence of something from outside' (*umūr tawakkulat fī 'd-dīn muṣṭafāda min ḥāriḡ*).<sup>109</sup> We may also refer to a technical term in Islamic psychology 'aql *muṣṭafād*, i.e. *al-thirathen naūs*: the 'aql *hayūlānī* in so far as it is realized by the 'aql *fa'āl*, that is, by a factor not coming from itself, but outside.<sup>110</sup>

<sup>102</sup> Cf. above, note 93.

<sup>103</sup> Dion. Thr. 22. 4-5: SVF 2, 166; 2, 181; 2, 187; a synonym of *autotelēs* is *telios*, cf. also Donnet, 1967, 190-3.

<sup>104</sup> Cf. Zaḡḡī, *ib.* 119, IT. 120, 4, and below, chapter VII, note 101. Lane, s.v., translates *fā'ida* with 'utility as expressive of a meaning, or as contributing to the expression thereof; meaning, import, complete meaning'.

<sup>105</sup> Donnet, 1967, 150-3.

<sup>106</sup> A. Gīn. *Ḥay* 2, 481, 13-4; cf. Say. *Mūzḥ* 1, 25, 19; A. Gīn. *Ḥay* 1, 308, 1: *muṣṭafāda ma'nān* (a meaning is obtained).

<sup>107</sup> Goichon, 1938, 289, s.v. *muṣṭafād*.

<sup>108</sup> Goichon, 1938, 290.

<sup>109</sup> *Ḥwār*, *Maṣ*, 135, 2, cf. Hunayn b. Ishāq's translation ap. Bodmer, 1971, 35, 4; cf. *ib.* pp. 36-7 with Alexandros of Aphrodisias' treatise *Peri aei. Scripta Minora*, I, 106-113, ed. Bruns, Berlin, 1837; for the psychological theories: Gélje, 1965, 277; Finnegan, 1957, discusses the connection between *muṣṭafād* and the Greek term *epitēleia*, pp. 147-8.

We believe that 'f-y-d' is equivalent to the meanings expressed by the Greek verb *telein*; the Arabic root is singularly suited for the translation of the Greek verb, since both verbs indicate a relation of giving, paying, as well as a completion, a realization. Probably the first term to be used in this context in the Arabic world was *muṣṭafī* as the translation of *autotelēs* (or *telios*). The philosophical terms *muṣṭafād*, *afāda* etc. must be a later development. It is interesting that *telos* in the sense of 'use, aim, goal' of a science is translated with *fā'ida*.<sup>111</sup>

Another trace of the Stoic theory about the *lôgos* is found in observations about the development of speech and reason—in Stoic terminology translated both by the word *lôgos*. Iamblichos tells us that according to the Stoics the *lôgos* is not immediately realized at the time of birth, but that it takes fourteen years to build it up.<sup>112</sup> The number of fourteen years is mentioned by Diogenes the Babylonian in his definition of language 'which is completed after fourteen years'.<sup>113</sup> A number of seven years is given in the *Placita Philosophorum* in the chapter about the question 'How do perception, insight, and the internal *lôgos* come into being?'.<sup>114</sup> The answer is that the internal *lôgos* is formed in the course of seven years, which is evidently the first phase of a process that results in the possession of both inner and outer *lôgos* (i.e. both reason and speech). This passage in the *Placita Philosophorum*, or rather its translation by Qusṭā ibn Lûqā<sup>115</sup> may have been the source for Qazzālī<sup>116</sup> and Rāzī,<sup>117</sup> who mention the same division of human life into periods of seven years.<sup>118</sup>

## CHAPTER THREE

## THE THEORY OF GRAMMATICAL CATEGORIES

'Children should know in the first place how to decline nouns and verbs, for otherwise it is impossible for them to reach an understanding of the rest.'<sup>1</sup>

## A. THE PARTS OF SPEECH AND SIBAWAIHI'S DIVISION

At first sight the division into three parts of speech (*aqṣām al-kalām*) in Arabic grammar seems to be a blueprint of the Aristotelian division into noun (*ónoma*), verb (*rhéma*), and particle (*sindeismos*). This was already suggested by Merx, but he pointed out the resemblance to Aristotle and Greek logic exclusively, without taking into account Greek grammar.<sup>2</sup> While it is true that there is an undeniable superficial parallelism between the Aristotelian and the Arabic tripartition — a parallelism noticed by Arabic authors as well<sup>3</sup> — it cannot be denied that there is a great difference between the Aristotelian logical division and the Arabic grammatical division, especially when we consider the fact that the Aristotelian terms did not denote parts of speech, but rather constituent parts of sentences.<sup>4</sup>

Merx accepted the identification of the three Arabic parts of speech, *ism*, *fi'l*, and *ḥarf*, with the Aristotelian *ónoma*, *rhéma*, and *sindeismos* without any reserve, but this was rejected by Weiß.<sup>5</sup> According to him *ḥarf* is a non-technical notion (i.e., it is used for every word which is neither noun nor verb), whereas *sindeismos* is something specific, namely a word which binds together other words and phrases.<sup>6</sup> There

did exist in the Arabic world a logical triad which correlated with the Aristotelian 'parts of speech', namely *ism*, *kalima*, *riḥāṭ*, for instance in the writings of Fārābī and Ḥwārizmī, but these terms date from a later time. Weiß is right in saying that the Arabic grammatical division was anterior to the introduction of logic into the Arabic world, so that the latter cannot have been imitated by the former: 'Die Auffassung, als gingen bei den Arabern die Anfänge der Logik denen der Grammatik voraus ist ein Hysteronproteron, das die Folge der historischen Tatsachen auf den Kopf stellt'.<sup>7</sup> We must add, though, that although the logical division became known to the Arabs at a later time, it could have influenced Arabic grammar through Greek grammatical theory, which often betrays the traces of logical influence. For most Greek grammarians the study of language was identical with the study of the noun and the verbs, while the rest of the words were considered not essential for the sentence, and therefore, not for grammar.<sup>8</sup> In this respect, they undoubtedly followed the tradition initiated by Aristotle.

Sibawaihi begins his 'Kitāb' with the words 'Words are noun, verb, or particle with a meaning that is neither noun nor verb'.<sup>9</sup> The term *ḥarf* does not receive any definition, but three examples are given: *raḡul* (man), *faras* (horse), *ḥal'īl* (wall).<sup>10</sup> It is a well-known fact that the analysis of paradigms is very important for the history of Greek and Latin linguistics, not only because in giving examples grammarians tended to use their own names or those of their teachers, but also because the recurrent use of the same examples often helps to

is minor. Cf. Fohlsch. 1939, 161-3; Stenbøl, 1894<sup>2</sup>, 2, 263 sqq.; Gleditsius, RE. VII, 2, 1799-1811, s.v. *Grammatik*. Morpurgo-Taggabue, 1967, 43-58.

<sup>1</sup> Weiß, 1910, 381.

<sup>2</sup> On the opinion of the Latin grammarians in this respect: Glück, 1967, 29-30.

<sup>3</sup> Sib. Kit. I, 2, 1 (A13). Usually the word *kalām* (words) is explained as a collective indicating the material from which the *kalām* (speech) is made (*ism al-ḡayr, ḥarf al-ḡayr*, cf. Sib. Kit. I, 2, 1; b. Mal. Aḡf. var. 8-9; b. Hiš. Awd. I, 11, 9-12). A single word is called *kalima*, which is defined as 'a sound which indicates a single, conventional meaning' (Zam. Maf. 4, 14 *al-lafṣa al-dāḥi'ah 'alā ma'nan muḥṭadān ḥi'ḥ waḥid*). The regular plural of *kalima* is, of course, *kalimāt*. The difference between *kalām* and *kalimāt* is that the latter always possesses a complete meaning (*ḥi'ḥ*), whereas the former does not necessarily possess such a meaning, cf. b. Hiš. Awd. I, 12, 1-6.

<sup>4</sup> The word *ḥal'īl* is left out in Zaggagi's quotation of the 'definition', *Id.*, 49, 9-10. As far as I know, 'wall' is not used in Greek grammatical literature, except for the famous example of *solonizōmēr peripatōn qd ho talchōn ēyese* (while I was walking the wall fell down), according to Doanet, 1967, 250-1, this was the standard example of the grammarians, cf. his reference to Johannes Glykās, *Johannis Glykās opus de vera significazione ratione*. Ed. A. Jahn Bern, 1848, 35, 15 sqq.

<sup>1</sup> Quint. instit. orat. 1, 4, 22 (*nomina declinare et verba in primis parti sciunt: neque enim aliter pervenire ad intellectum sequentium possunt*).

<sup>2</sup> Merx, 1889, 141-3.

<sup>3</sup> Cf. Ḥwāz. Maf. 145, 9 sqq.; *kalima* and *riḥāṭ* are called by the grammarians *fi'l* and *ḥarf* *al-ma'mūl*, *add* respectively; Far. Ihs. 34, 4-7: the Arabic parts of speech, *ism*, *fi'l*, *ḥarf* are called by the Greek (sic!) grammarians *ónoma*, *rhéma*, *adit*.

<sup>5</sup> Weiß, 1910, 379 sqq.

<sup>6</sup> On the *sindeismos* in Aristotle's writings. Gallavotti, 1954. The definition, post. 1456 b 38-1457 a 6, is completely corrupted, but the examples show that the *sindeismos* has a specific function, namely that of linking words and phrases, as is suggested by

establish links between different groups of grammarians.<sup>11</sup> The field of Arabic grammar lies almost barren in this respect. It is, therefore, rather significant that Sibawaihi uses the two words *raḡul* and *faras* as examples of nouns. Barwick already observed that when these two examples occur in Greek or Latin grammar (*anthrōpos/hippos*, and *homo/equus*, respectively) they spring from Stoic tradition.<sup>12</sup> We do not believe that the occurrence of the same two words 'man' and 'horse' in Arabic grammatical literature is a coincidence, and we think that by his use of precisely these two substantives—the origin of the third one, *ḡa'īf*, remains unclear—Sibawaihi followed a very old tradition, a tradition even older than the examples cited by Barwick, since the very same words are already used by Plato and Aristotle.<sup>13</sup> Of course, Sibawaihi's source could not have been the Aristotelian tradition, since he lived before the introduction of Greek logic into the Arabic world, but he was dependent on the tradition of the schools, as reflected in Dionysios Thrax' *Tékhnē*, which in its turn was dependent on the Stoics. Incidentally, Dionysios' third example, *lithos* (stone), was also among the popular examples of Arabic grammarians, but in this case Aristotle may have been the source. It is true that later grammarians who continued to use Sibawaihi's first two examples may have borrowed them from the by then already existing translations of the works of Aristotle, but it is certainly more obvious to attribute them to the enormous influence of the *Kitāb*.

Among later grammarians who used *raḡul* (or *insān*) and *faras* are Zaggāgi,<sup>14</sup> Mubarrad,<sup>15</sup> Ibn Kaysān,<sup>16</sup> Abū 'Ubeid,<sup>17</sup> Ibn Ġinnī.<sup>18</sup>

<sup>11</sup> For the use of one's own name or the name of one's teacher, cf. Barwick, 1922, 93 and note 2; 173. As a typical example we may mention Apollonios' use of the name *triphidus*; the name *diogenes* in the *Tékhnē* of Diogenes of Babylon, the names *nikē* and *nikētes* in Diogenes Laertius, I, 56 sqq. Cf. however Schmidt, 1839, 66, n. 91, last paragraph. For the tradition of the paradigms: Barwick, 1922, 93; 1957, *passim*; Dumit, 1967, 294-6.

<sup>12</sup> Barwick, 1957, 8, n. 1: "Die beiden Substantiven (sc. *homo*, *equus* in Augustinus' *De Doctrina*) stammen aus stoischer Tradition, Diogenes v. Bab. (SVF II, 213, 29) nennt ebenfalls "Mensch" und "Pferd", *anthrōpos* und *hippos* als Beispiele". cf. Diog. Thr. 24, 5.

<sup>13</sup> Plato, *Adj. I*, 111 D; Aristot. *cat. I* b 28 et *passim*; cf. also Aristoteles in discussion with Plato ap. Simplic. in Aristot. *cat. I*, 208, 28 ed. Kalbfleisch (*hippos*).

<sup>14</sup> Zagg. *Id.* 100, 6: *Qam*, 17, 3.

<sup>15</sup> Mub. ap. Zagg. *Id.* 51, 2 (quoted from the beginning of the *Asyrafat*). cf. Zagg. *Id.* 100, 6.

<sup>16</sup> b. Kais. ap. Zagg. *Id.* 50, 13. cf. below, chapter III B, note 23.

<sup>17</sup> Abū 'Ubeid ap. Suy. *Mush.* I, 191, 4.

<sup>18</sup> b. Ġinnī *Ḥaq.* 2, 206, 9.

Ibn al-Anbārī,<sup>19</sup> to name but a few. Even outside grammar we find the same two nouns being used as examples, for instance by a theologian such as al-Aṣṣārī,<sup>20</sup> and by two philosophers, al-Fārābī<sup>21</sup> and Ibn Sina.<sup>22</sup> In the case of al-Aṣṣārī the use of *insān* and *faras* may be ascribed either to his knowledge of Sibawaihi's *Kitāb*, or to his use of the commentaries on the Aristotelian writings, which, under Stoic influence perhaps, use *anthrōpos* and *hippos*.<sup>23</sup> The same holds true for Ibn Sina. With al-Fārābī there is also the possibility of influence by Greek grammar.<sup>24</sup>

Sibawaihi's words 'As for the verbs they are patterns taken from the expression of the events of the nouns, and they are constructed to (signify) what is past, and what is to come, and what is being without interruption'<sup>25</sup> have often been taken as a definition of the verb.<sup>26</sup> But when we understand the term *ma'ḥūḍ* in the sense of 'etymologically derived from', we find that it is an assertion that the masdars are etymologically prior to the verb. Merx thought that there is a connection between this assertion and a passage from Aristotle, where the same thing seems to be stated in slightly different words.<sup>27</sup> There is, however, no need to look for a connection in the commentaries on Aristotle, if we take into account the data furnished by the Greek grammarians, as we will see below in the discussion concerning the priority of the masdar.<sup>28</sup>

Another problem is the interpretation of the words 'The events of the nouns' (*aḥdāṭ al-asma'*). According to Zaggāgi we must understand by 'nouns' 'the owners of the nouns' (*aḥdāṭ al-asma'*), i.e., the real persons who perform the actions, and who are the nominata of the

<sup>19</sup> b. Anb. *Ins.* 102, 17. *Anb.* 16, 17.

<sup>20</sup> Al-Ṣārī, *Ḥikm.* 21, 24-5. Al-Ṣārī uses *insān wa-faras* instead of *raḡul wa-faras*.

<sup>21</sup> Far. *Th.* 11 uk. 12, 1 (*insān wa-faras*): Fārābī also uses Sibawaihi's examples for the personal names *raḡul* and *ma'ḥūḍ*.

<sup>22</sup> van den Bergh, 1954, 2, 120.

<sup>23</sup> See Aristot. *cat. I* b 28.

<sup>24</sup> Cf. below.

<sup>25</sup> Sib. *Ku.* 1, 2, 2-3 (A 14).

<sup>26</sup> These words are also quoted by Rhd. *Ma'* 1, 36, 7-8.

<sup>27</sup> Merx, 1889, 142. cf. Götje, 1971, 5-6. It really does not seem very probable that Aristotle means an etymological derivation of the verb from the noun when he says (he interprets 1b b 8 sqq.): 'I say that it also signifies time (sc. the verb), such as "health" (*thugiein*) is a noun, but "is healthy" (*hugiein*) is a verb, because it also signifies the present occurrence, and it is always a sign of those things which are said about something else' (G 10).

<sup>28</sup> Cf. below, chapter III C.

nouns.<sup>20</sup> This interpretation is criticized by Bāqilānī: according to him such an interpretation is only allowed when there is sufficient proof to alter the manifest meaning (*ẓāhir*) of the words. In the present case, it is perfectly right to interpret Sibawaihi's words as an implicit statement that nouns are identical with their nominata.<sup>21</sup> 'Events of the nouns' are thus identical with 'events of the persons' (*ahwāl al-ashfās*).

Concerning the paradigms of the nouns, *raḡul* and *faras*, we can have no absolute certainty whether their origin must be sought in the translation of the commentaries on Aristotle, or in direct contact with Greek grammar. The most frequently used paradigm for the verbs, however, hardly leaves any room for such doubts. The Greek verb *tiptein* (to hit) was never used by Aristotle, or by his commentators, whereas in grammar it was the most popular example for the category of the verbs.<sup>22</sup>

Throughout antiquity *tiptein* remained the most popular and most frequently used verbal paradigm. Theodosios used its conjugation as an example in his treatment of the verb—which means that it was used in the schools. We come across *tiptein*—sometimes together with *graphein* (to write) and *poiein* (to do)—in almost every work of Greek grammar.<sup>23</sup> It is hardly surprising then that this verb, translated into Arabic as *daraba* should have been borrowed by the Arabic grammarians, if they really were dependent on the contact with living grammar in the Hellenistic countries. Since Aristotle uses other paradigms, e.g. *hugainein* (to be healthy) and *horistein* (to walk), we cannot but attribute Sibawaihi's use of *daraba* to the influence of living Greek grammar.<sup>24</sup> Note that *kataba* (to write) and *fa'ala* (to do) are also frequently used.

<sup>20</sup> *Ṣafūṭ al-ṭarāḥ* is in Zaḡḡālī's terminology synonymous with *maṭnawāt*. Id. 56, 5: 82, 3; 83, 4.

<sup>21</sup> Bāq. Trarb. 228, 17–229, 7.

<sup>22</sup> A few examples (Dion. Thr. 49, 1 (*tiptēs, poiein, graphein*); 54, 2; 55, 3 (*graphein, legein*); Greg. Cor. 95 (*tiptēs, poiein*); Burwick (1922, 93, n. 3) supposes that *graphein* and *legein* stem from the Stoic tradition, cf. Dug. Laert. 7, 58, from the Stoic *Tychon* of Diogenes of Babylon. Note that the verb *legein* in its Arabic translation *qala* was less appropriate because of its weak medial radical; still, it is often used as an example of this class of verbs.

<sup>23</sup> Cf. Uhlig's amusing note in his introduction to the *Techne* of Diogenes Thrax, LIT, 16–21, where he also draws the attention to the fact that the Syriac and Armenian translations use the verb 'to hit'.

<sup>24</sup> Sib. Kit. (a few examples chosen at random) 1, 1, 14; 1, 2, 6; 1, 4, 3; 1, 14, 10; 1, 24, 4; 1, 55, 12; 1, 66, 5 sqq.; 1, 82, 9 sqq.; 1, 87, 7–8; 1, 93, 3 sqq.; 1, 100, 6–9; 1, 103, 30; 1, 111, 8 sqq.; 1, 278, 16; 1, 386, 7; 1, 407, 10; 1, 433, 11. Cf. also Sib. ap. b. Fār. 33b, 49, 11 sqq.

Owing to the enormous influence of Sibawaihi's *Kitāb daraba* remained in use with later grammatical writers; these include: Māzinī,<sup>25</sup> Mubarrad,<sup>26</sup> Zaḡḡālī,<sup>27</sup> Sirāfi,<sup>28</sup> Ibn Ġinnī,<sup>29</sup> Ibn al-Aṣbārī,<sup>30</sup> Zamakhsharī.<sup>31</sup> The same verb is used also in logical writings, mainly in a grammatical context, for instance with Hwārizmī<sup>32</sup> and with Rāzī,<sup>33</sup> but there are also instances where it is used in purely logical texts, for instance by Gazzālī<sup>34</sup> and by Ibn al-'Assāl (1st half of the 13th/14th century).<sup>35</sup> This shows that whatever may have been the influence of the *Corpus Aristotelicum* on Arabic logic and grammar, Sibawaihi's influence as the author of the *Kitāb* surpassed it in such things as the choice of a paradigm.

The interpretation of Sibawaihi's definition of the third part of speech (*ḥarf ḡā' li-ma'nawāt ḡā'ā hi-'sm wa-lā fi'l*)<sup>36</sup> is essential for the understanding of the Arabic doctrine of the parts of speech. The first translation into a European language was given by de Sacy: '(et la lettre) employée pour exprimer un sens et qui n'est ni nom, ni verbe'.<sup>37</sup> According to this translation the particle is a part of speech with a special meaning, just as nouns and verbs have their special meanings. Merz tried to fit Sibawaihi's words into his conception of an Aristotelian division of the Arabic parts of speech, and was therefore forced to regard the third part of speech as a category without a meaning of its own, since according to Aristotle the *sundekmos* is a meaningless sound (*phōnē dsēmos*).<sup>38</sup> This resulted in the translation: 'particula sive littera, quae ad sensum aliquem accedit',<sup>39</sup> i.e., the particle serves to indicate a meaning in another word. Similarly we find with Jahn: '... um (den Nominibus und Verbis) Sinnstellungen zu geben (welche sie sonst nicht haben), ohne selbst Nomina und Verba

zu sein'.<sup>49</sup> This interpretation is correct according to the definitions of the particle given by later grammarians, for instance by Zaḡḡāḡi 'particle is whatever signifies a meaning in another word' (*mā dalla 'alā ma'nān fī gairihī*).<sup>50</sup> which assign to the particle the function of modifying the meaning of another word in the sentence.<sup>51</sup>

We agree with Weiß<sup>52</sup> that Sibawaihi's words, interpreted in this way, are in conformity with the interpretations of later grammarians, but that they do not represent Sibawaihi's own conception of the particle. In the first place, the words *laisa bi-'am wa-lā fī'l* cannot belong as a second attribute to the word *ḥarf*—which would be a highly unusual construction—, but they determine the word *ma'nān*.<sup>53</sup> In the second place, these words would be completely redundant, if we were to follow Merx and Jahn in interpreting *ḡā'a li-ma'nān* as 'gives a meaning in another word', since in that case the particles would have been defined sufficiently as something different from the nouns and the verbs, which do have a meaning of their own. In the third place, it is difficult to imagine that Sibawaihi should have left out words to the effect that this *ma'nā* is found in other words. For these reasons Weiß translates '3. *Ḥarfe, die zum Ausdruck für etwas gemeint stehen, das nicht Name (d.h. Ding) und nicht Aktion ist*'.<sup>54</sup> In other words *ḡā'a li-ma'nān* does not distinguish the particles from the nouns and the

verbs, but from other particles without a meaning, i.e., the *ḥarf* in the sense of 'letters, syllables'. We may compare with this the expression al-Aḥḡaṣ uses when he speaks about the word *nawdu* (sinner): *ḥiya ḥarf ma'nān laisa bi-'am*.<sup>55</sup> Here the category of the *ḥarf* with a meaning of their own is designated with the term 'meaningful particle' (*ḥarf ma'nān*). We may also refer to Zaḡḡāḡi's category of the *ḥarf al-ma'ānī* as against the *ḥarf* as letters and as parts of words.<sup>56</sup> Uwārizmī informs us that the Aristotelian *ribāḡāt = sindesmai* are called by the Arabic grammarians *ḥarf al-ma'ānī*.<sup>57</sup> That particles contribute to the meaning of the sentence with their own meaning is already stated in 'Alī's' definition 'a particle is what communicates a meaning'.<sup>58</sup> This interpretation seems to be preferable to the one given by Diem,<sup>59</sup> who takes *ḡā'a li-ma'nān* and *laisa bi-'am wa-lā fī'l* as two 'parallele asyndetische Relativsätze'. According to Diem *ḡā'a li-ma'nān* indicates the function of the *ḥarf*, namely having a meaning, as against the nouns and the verbs, which denote a thing and an action, respectively.<sup>60</sup>

The question remains how the words *ḡā'a li-ma'nān* are to be translated. Merx' criticism of de Sacy's translation 'employé pour exprimer un sens'—according to Merx this should have been *li-ma'nān*—is invalidated by the loci cited by Weiß, where the same words are used in the unambiguous sense of 'meaningful', 'giving a meaning',<sup>61</sup> which seems to be the correct interpretation of Sibawaihi's words.

<sup>49</sup> Jahn, 1. 1. 1. Cf. also Gajda, 1971, 6-7, who apparently believes that Jahn and de Sacy had the same idea about the semantic function of the particles. At least, that is what appears from Ullrich's words about later Greek theories which touch to the *nōmōtoma* a certain meaning 'Daß man den *nōmōtoma* eine semantische Funktion zuerkennt, würde in jedem Falle noch zur Auslegung Sibawaihis durch de Sacy und Jahn passen'.

<sup>50</sup> Zaḡḡāḡi W 54, 12-3.

<sup>51</sup> Cf. also h. Anb. Ins. 72, 7-8 'the particle is only used in order to communicate a meaning in a noun or a verb' (*al-ḥarf ma'ānī ḡā'a li-l-faḡal al-ma'ānī fī 'l-ḥam wa-l-fī'l*). Mub. ap. Zaḡḡāḡi Maḡ 222, 11 'it is like a particle of meaning, which is dependent on another word' (... *kāmat al-ḥarf al-ma'ānī allāhī ḥamā ma'ānīy bi-gawḡal*). Gajda, Mī'yār, 40, 1 'the particle is what does not signify a meaning, unless it is combined with another word' (*ma'ānī fī ḡā'a li-ma'nān allāhī bi-'arḡānīy bi-gawḡal*): id., 10, 10-3.

<sup>52</sup> Weiß, 1910, 375-8.

<sup>53</sup> Sibawaihi uses *ḡā'a* in the sense of *ma'ānīy*, which explains how he can say about a *ma'ānī* that it is neither a noun nor a verb, cf. Weiß, ib. 376-7 and e.g. Zaḡḡāḡi W. 36, 3-6. There is, though, a note in the margin of the manuscript used by de Sacy, which says (de Sacy, 1829, 383): 'And (the words) *laisa bi-'am wa-lā fī'l* are an attribute to *ḥarf*, not to *ma'ānī*, as some people believed. This is proved by the (sc. Sibawaihi's) words at the end of the chapter (*ma'ānī*) and *ḡā'a li-ma'nān* *ma'ānī bi-'am wa-lā fī'l*. (cf. Sib. Kit. 1, 2, 6-7) [A15]. The same argument is used by Diem, 1970, 322, cf. also Mosel, 1975, 217.

<sup>54</sup> Weiß, 1910, 376.

<sup>55</sup> Aḡḡaṣ ap. Zaḡḡāḡi Amālik 92, 1, 1 (cf. Weiß, 1910, 376).

<sup>56</sup> Zaḡḡāḡi W. 54, 12 sqq.

<sup>57</sup> Uwārizmī, Maf. 143, 13-4; cf. also Far. Alf. 42, 7-8 'To the meaningful words belong those words which are called by the grammarians *ḥarf*, and which are used to signify a meaning' [A16].

<sup>58</sup> Ap. h. Anb. Nuzha, 4, 10-1 in a verse *ḥarf* which has *fī'l li-ma'nān* instead of *ḡā'a li-ma'nān*. Cf. also b. Far. Sib. 53, 5-8 'Arabic grammarians discussed this very often (sc. the nature of the *ḥarf*), but the nearest thing to the truth is what Sibawaihi said; namely, that it is that which expresses a meaning which is neither a noun nor a verb, like when we say *zaid manṭiq* (Zaid is leaving), and then we say *ḥaf zaid manṭiq* (is Zaid leaving?); with the word *ḥaf* we express a meaning which is neither proper to *zaid*, nor an *manṭiq*' [A17]. Cf. Carter, 1972, 83 'the particle possesses a certain meaning, but its function is not specified'.

<sup>59</sup> Diem, 1970, 322-2.

<sup>60</sup> Diem, 1970, 316-7.

<sup>61</sup> Merx, 1889, 142, n. 2; Weiß, 1910, 378; cf. Sib. Kit. 2, 328, 11; 2, 473, 22; 2, 172, 4; cf. also above, note 51 (b. Anb.: *li-ḡā'a li-ma'nān*). In his commentary on Sibawaihi's words Sīrāfi says (Sīrāfi, 1, 7, quoted by Mphrak in his edition of the *ḡā'a*, p. 54, n. 3): 'And if someone were to ask: why did he say *ḥarf ḡā'a li-ma'nān*, yet we all know that nouns and verbs are meaningful as well (*fī'ma'ānīy*)? ...' [A15].

Several philosophical sources demonstrate the fact that a *ḥarf* was felt between the grammatical *ḥarf* (together with *ism* and *fi'l*) and the philosophical *ribāʿ* or *rābiʿ* (together with *ism* and *kalima*), for instance in the remarks made by Fārābī,<sup>62</sup> Ḥwārizmī,<sup>63</sup> and Gābir Ḥayyān,<sup>64</sup> and also in Zaḡḡālī's conspicuous use of the word *ribāʿ* in his explanation of the term *ḥarf*.<sup>65</sup> *Ribāʿ* may be regarded as a calque of the Greek (Aristotelian) *σύνδεσμος*.<sup>66</sup>

For the original meaning of *ḥarf* we should turn to Sibawaihi. In the *Kitāb* the *ḥarf* is the third part of speech, with a meaning of its own. Sibawaihi wished to express the fact that the *ḥurūf* have their own meaning in order to distinguish them from another kind of *ḥarf*, namely the letters. *Ḥurūf* in the sense of 'letters, sounds' are divided by Zaḡḡālī into two groups: in the first place, they are the *ḥurūf al-nu'ḡam*, i.e., the sounds of the alphabet, which constitute the elementary material for all languages. But these *ḥurūf* may also be regarded as the elements of the words, e.g., *ā* in the word *ka'fa*, or the *lām* in the word *ḡaraba*, i.e., as the letters of these words.<sup>67</sup> This corresponds to the Greek distinction between the *στοιχελον* and *ἡ χαρακτήρ τοῦ στοιχελου*, a distinction that is made by Diogenes of Babylon, by Sextus Empiricus, and by Ammonios in his commentary on Aristotle's *De Interpretatione*.<sup>68</sup> In the translations of Aristotle's writings *στοιχελον* is first transcribed as *ιστιγουρ*—under the influence of Syriac *istigwā* = Greek *στίχων*, contaminated with Syriac *istigwā* = Greek *στοιχελον*—but this transcription was soon replaced by the term *ḥarf*, which is very near to *στοιχελον* in meaning: both words

indicate the smallest part of something, an element, a little piece.<sup>69</sup> In order to distinguish them from the meaningful *ḥurūf* these elements are also called *ḥurūf al-nu'ḡam*.<sup>70</sup>

The second category of *ḥurūf* is called *ḥurūf al-na'āni*; they are distinguished from the *ḥurūf* in the sense of 'letters, consonants' by the fact that they are meaningful. According to Weiß the meaning of *ḥarf* as a member of the second category is not yet restricted to the technical meaning of 'particle': 'Hier ist nun zunächst festzustellen, daß bei Sibawaihi noch kein Ansatz für diesen Sprachgebrauch vorhanden ist. Nie bedeutet *ḥarf* bei ihm schlechtweg "Partikel"; wo er wirklich den dritten Redeteil als solchen bezeichnen will, bedient er sich umständlicher Umschreibungen, in denen oft das Wort *ḥarf* nicht einmal vorkommt'.<sup>71</sup> Very frequently Sibawaihi uses *ḥarf* in the sense of 'word', 'phrase', 'combination of words', or generally 'small component of the sentence'.<sup>72</sup> This is also confirmed by Zamahšarī's warning that the ancient grammarians often used *ḥarf* with the meaning of *kalima* (word).<sup>73</sup> The Greek term *στοιχελον*, which we have met above as the prototype for the Arabic *ḥarf* = 'letter', is also used in expressions where its meaning seems to be rather close to the term 'word', as for instance with Apollonios Dyskolos: the meaning that corresponds to each word is as it were a component of the sentence (*στοιχελον τοῦ λόγου*);<sup>74</sup> sometimes a sentence lacks an element (*στοιχελον*), e.g. a preposition.<sup>75</sup> But the most frequent meaning of *στοιχελον*—apart from the meaning 'letter'—is that of 'part of speech': in the scholia on Dionysios Thrax' *Téchne* it is stated that the philosophers call *στοιχεῖα* what is called in grammar *μερὲς τοῦ λόγου*;<sup>76</sup> doubtlessly this use of *στοιχελον* was also known in other grammatical writings. The Arabic word *ḥarf* was an ideal calque of the Greek

<sup>62</sup> Far. Sub. 54, 8-9: *ribāʿ* is called by the grammarians *ḥarf*.

<sup>63</sup> Ḥwāz. 34a, 143, 15-4: *ribāʿ* is called by the grammarians *ḥarf*.

<sup>64</sup> Gābir ap. Kruus, 1942, 2, 250: in grammar we have *ism*, *fi'l*, *ḥarf*, philosophers (*ahl al-kalām al-falāsifa*) use to call these parts of speech *ism*, *kalima*, *ribāʿ* (unites two nouns) (*yūḥid* (unites a noun and a verb); cf. above, note 3).

<sup>65</sup> Zaḡḡ. Iq. 44, 11: the particle is a tie (*ribāʿ*) between nouns and verbs.

<sup>66</sup> E.g. in the translations of Aristotle's *Poetics*: Ibn Sīrī, 191, 15 (= *ribāʿ*); Maḥdī ibn Yūnus, Sīrī, 127, 9 (distinguished from *maḡāla* = *ḡarab*, ib. 127, 12); Ibn Rūūd, 235, 20 (distinguished from *ḡarab* = *ḡarab*, ib. 235, 24); cf. Fischer, 1964, 148. For *maḡāla* cf. below.

<sup>73</sup> Zam. Kalām, I, 61, 10.

<sup>74</sup> Apoll. Dysk. synt. 2, 11.

<sup>75</sup> Ib. 5, 14.

<sup>76</sup> Scholia D.T. 514, 35; Chrystippos, SVF 2, 45, 11; Apoll. Dysk. synt. 7, 12; 449, 2. The classic study about the meaning of *στοιχελον* is Dieck, 1899. Cf. also: Balázs, 1965. According to Balázs, the *στοιχελον* was originally a rhythmical-metrical term, which denoted the smallest element of a verse, and later became a grammatical term with the meaning of 'sound', 'letter'. The Atomists' use of *στοιχελον* in the sense of 'constituent elements of the universe' was derived from the grammatical term (cf. Balázs, ib. 234).

*stoicheion*, since it shares with the Greek word the meaning 'component, small part, element'; the meaning 'letter' was original: the meaning 'particle' is the result of the development of the meaning of *ḥarf* via 'small word' to 'small word other than noun or verb' and finally to 'third part of speech'. This development was already determined by the use of *stoicheion* in Greek grammatical and philosophical literature.

Besides the three official parts of speech, *ism*, *fi'l*, *ḥarf* Arabic grammar recognized a number of other grammatical or syntactic categories without considering them to be real parts of speech. This is also the case in Greek grammar, where we find for instance the category of the adjective (*epitheton*), which is not regarded as a separate part of speech, although it is being used as such. In a discussion between the grammarian Tryphon (1st century B.C.) and an unknown Stoic<sup>17</sup> the criteria for the division into parts of speech are dealt with: the morphological change of a word (*paraschematismos*) can never be the criterion for a division into parts of speech. For instance in the case of proper names, even when they may be shown to possess a different declension, they are not a separate part of speech, since their meaning is identical with that of the rest of the nouns: 'It must be said about each part of speech that we should take into account the essential characteristics (sc. the semantic ones), and not the secondary ones (sc. the morphological ones), and we should divide (the words) accordingly'.<sup>18</sup> The same opinion is expressed in Arabic grammar: the proper name (*alim*) has its own phonetic rules and its own deviations from analogy due to its frequent use,<sup>19</sup> yet the

<sup>17</sup> Scholia D.T. 214, 17 sqq., 24 sqq.; 317, 33 sqq. On Tryphon: RE VII A, 1, 726-44, Schneider. Apoll. Dysk. frg. pp. 30 sqq. connects this discussion with Apollonius Dyskolos (cf. also Schmidt, 1849, 44, n. 64). His main argument is that it is improbable that Priscianus (Inst. 1, 2) should have borrowed his opinion about the *partes orationis* from Tryphon, and not from Apollonius Dyskolos. On the other hand, it seems more obvious to proceed from the fact that Tryphon's name is actually mentioned by the scholiast. Cf. also Prisc. inst. 9, 1 with Tryphon. frg. 39, p. 33.

<sup>18</sup> Scholia D.T. 214, 29-31 [G11].

<sup>19</sup> This is already recognized by Sibawayhi, e.g. Kit. I, 229, 9 sqq.; 2, 211, 11 sqq. Cf. also Ibn al-Ginn's chapter in the *Uṣūl* on those characteristics of the proper names (*al-ism*) that are not shared by the generic nouns (*al-ḥaqiq*). Uṣūl, 3, 32, 8 sqq.; cf. Ta'lab, Mag. I, 211, 8-9. The distinction *ḥarf* : *al-ism*: *Zaḥḥ*. Lām 37-8, Zam. Muṣ. p. 5 (important for Barhebraeus' doctrine, cf. Mera, 1889, 225 sqq.) *Lamab* is used for proper names by al-Hasan ibn Suwār in his notes on the *Categories*, 371, 16. 'A nickname (*laqab*) is a name used for things which do already have another name' [A19]. *Laqab* is also used in grammar, e.g. Zaḥḥ. Ij. 89, 16: noun (*ism*), and attribute (*ṣifa*) and proper name (*laqab*). The difference between nouns and proper nouns is mentioned in some definitions of the noun, cf. below, chapter III B.

proper name cannot be set apart as a separate part of speech. In the same way, Arabic grammar distinguished between 'general' (*kuḥūl*) and 'particular' (*ḥuṣūṣ*) nouns, but did not regard them as separate parts of speech: the distinction, which is probably borrowed from logic, is based on a difference in use and extension, not in essential meaning.<sup>20</sup>

We have already pointed out that adjectives were not recognized as a separate part of speech either in Arabic or in Greek grammar.<sup>21</sup> The Greek grammarian Dionysios Thrax defined nouns as 'words which signify something concrete or abstract'. If it is accepted that this something may be a substance as well as a quality, then adjectives will be nouns as well, since they indicate a quality, which may be attributed to more than one substance.<sup>22</sup> This is, of course, in accordance with the Stoic doctrine that everything, including the qualities, is a body. Adjectives are defined—as a subspecies of the nouns—in the following way: 'Adjectives are words that are used homonymously for general and proper nouns, and which signify praise or blame'.<sup>23</sup> In Arabic grammar we find a *de facto* distinction between adjectives and substantives: in a discussion with Ibn Bālawāh, Abū 'Alī al-Fārisī is criticized for neglecting the distinction '... it was as if the learned sheikh (sc. al-Fārisī) did not distinguish between noun (*ism*) and adjective (*ṣifa*)'.<sup>24</sup> It is hardly a coincidence that several Arabic authors define adjectives as words that are used as indications of praise or blame.<sup>25</sup> According to Diem, Sibawayhi distinguished

<sup>20</sup> This difference is explained by Rāzī, Muṣ. I, 40, 11 sqq.; Gazr. Mi'yār, 36, 3-4; 6-7, 37, 11-4, Maq. p. 10. Cf. Arnaldez, 1956, 127.

<sup>21</sup> Steinthal, 1891<sup>2</sup>, 2, 251-60.

<sup>22</sup> The category of the *anonyma kategoria* (i.e. nouns serving as predicates) is conjectured by Steinthal (1891<sup>2</sup>, 2, 256), a class of adjectives called *kategoria* is mentioned in the scholia [31, 233, 24]. In the definition of the noun given by Ibn al-Abbār, Inj. 2, 14, the two syntactic functions of the nouns are mentioned: '(A noun is) that which can receive a predicate, and which can be used as a predicate'. cf. below, chapter III B, note 33.

<sup>23</sup> Uṣūl Thr. 34, 2-4 [G12].

<sup>24</sup> Say. Muṣ. I, 240, 15 (*wa-lā-anna 'l-ṣifa li-l-ḥarf wa-l-ism wa-l-ḥarf*); cf. Say. Iq. 72, 8. If a word is a noun, it has to be either solid (*ḥamūd*) or an attribute (*ḥarf*) (on *ḥamūd*, cf. below, chapter III C, note 7), and 'al-ḥarf, Maq. 350, 8). The same distinction with Zaḥḥ. Ij. 89, 16: noun (*ism*) or attribute (*ṣifa*) or nickname (*laqab*). Cf. also b. Kar. sq. 6, Ash. Inj. 19, 7 'the nouns, but not the adjectives' (*al-ism wa-l-ḥarf*).

<sup>25</sup> b. Gin. Uṣūl, 2, 371, 2 sqq.; b. Fāz. ■■■, p. 36; cf. b. 10: 'Abd al-Gabbār, Muṣ. 7, 52, 15; Zam. Muṣ. 46, 12-5; Ruṣūm. ap. Mubārak, 1963, 315, 15; 'al-ḥarf, Maq. 2, 360, 12.

between three parts of speech, of which the *ism* indicates objects, the *fi'l* actions, and the *ḥarf* meanings (functions). The category *ṣifa* is a syntactic category which includes the adjectives but not only them: 'Das Adjektiv wurde seinem Wesen nach als syntaktisches Attribut aufgefaßt und stand damit außerhalb dieses Systems'.<sup>86</sup> In later grammar *ism* became a grammatical category, so that abstract nouns and adjectives could be reckoned among the *asmā'*. The criterion for the inclusion of a word in a category is whether it may replace words from that category.<sup>87</sup>

Morphological and semantic differences between the noun and the pronoun (e.g. different declension, absence of a deictic element in the nouns) led the Greek grammarians to separate the pronoun from the noun and to recognize it as a part of speech (*antónomía*) which included the personal and the demonstrative pronouns.<sup>88</sup> The *Aristotelikoi* continued to regard the noun and the verb as the pivots of the sentence, and the rest of the words as unessential: in their view the pronoun was only a substitute for the noun. We may quote in this context the testimony of the above-mentioned discussion in the scholia, as well as the remark of Ammonios that Alexandros of Aphrodisias added the pronouns and the adverbs to the category of the nouns.<sup>89</sup> Stoic grammarians did combine the personal and the demonstrative pronouns, but within the category of the *dríthra*, which comprised besides these pronouns the article, as well as the relative pronouns.<sup>90</sup> Their argument was that pronouns may be replaced by articles, III instance in Homeric Greek, and something which may replace a word is identical with that word, and belongs to the same category.<sup>91</sup> This theory is criticized in the above-mentioned discussion between Tryphon and an unknown Stoic.<sup>92</sup>

It was precisely this argument of syntactic interchangeability that made Sibawaihi include personal and demonstrative pronouns in the category of nouns.<sup>93</sup> The personal pronoun is called by him *ism*

*muḍmar* (hidden noun), but this term may also denote the noun to which the pronoun refers.<sup>94</sup> *Isim muḍmar* is apparently related to the Syriac term for the personal pronouns, *ḥuṣṣāḥyā* (the understood one, the intended one); the origin of the Syriac term is not clear. A variant of the Arabic term, *ḍamir*, became the usual name for the pronouns in Arabic grammar. The demonstrative pronoun is called by Sibawaihi *ism muḥham* (dubious, ambiguous noun), because it may refer to many objects;<sup>95</sup> a later term for the demonstrative pronouns is *asmā' al-šara*. Both categories, *ism muḍmar* and *ism muḥham*, are combined into one category, the *ḥawāliṣ*, by Ḥwārizmī and Fārābī. In Ḥwārizmī's account of Aristotelian logical theory he tells us that *ḥawāliṣ* is a logical term, and that it is the equivalent of the grammatical technical terms *asmā' muḥhamā*, *asmā' muḍmara*, and *abdāl al-asmā'*.<sup>96</sup> Earlier in his work Ḥwārizmī deals with the theory of the grammarians, and there he asserts that in grammatical terminology *asmā' muḍmara* denote the personal pronouns, III *asmā' muḥhamā* the demonstrative pronouns. The term *ḥawāliṣ* was probably influenced by the Syriac term for the pronouns, which was originally *ḥlāp šmā*, before it became *ḥuṣṣāḥyā*.<sup>97</sup> Both *ḥlāp šmā* (*ḥawāliṣ*) and *abdāl al-asmā'* would be good translations of the Greek term *antónomía*.

Fārābī uses the term *ḥawāliṣ* in his *Kitāb al-alfāz al-musta'mala fi 'l-manṭiq*.<sup>98</sup> In this work III describes the elements of speech in accordance with Greek grammatical doctrine—as he himself admits: Arabic grammarians did not distinguish between different kinds of *ḥarf*, and he—Fārābī—had therefore had to borrow names for these different kinds of *ḥarf* from Greek grammatical scholars, who operated with five categories: *ḥawāliṣ*, *naṣilāt*, *naṣṣiāt*, *ḥawāṣi*, *rawābiṭ*.<sup>99</sup> The first category comprised the personal and demonstrative pronouns and has been dealt with above.

The second category, the *naṣilāt*, includes the article, the relative pronouns, and the particle of the vocative *yā*. The combination of the

<sup>99</sup> *Far. Alf.* 42, 11 sqq.

article and the relative pronouns is typical for Greek grammar, for instance in Dionysios Thrax' *Téchne*, where they together form a category of the *árrhro*.<sup>100</sup> Even more characteristic is the combination of the article and the particle of the vocative: the particle *ó* was generally regarded as the vocative of the article, a doctrine refuted by Apollonios Dyskolos.<sup>101</sup> Arabic grammar often designates the relative pronouns as *asná' munáfila*, and this grammatical term is related to Fārābī's *wāfilāt*.<sup>102</sup> *Wāfila* translates the Greek word *árrhron*: Mātib ibn Yūnus used it to translate *árrhron* in his translation of Aristotle's *Poética*.<sup>103</sup> In Ibn Sīnā's commentary on *Poética*, however, we find *wāfila* as a synonym for *ribāt*, whereas the articles are called *fāfilāt*.<sup>104</sup> Gätje solves this problem by supposing a division of the *munāfilāt* into two sub-groups, *wāfilāt* and *fāfilāt*, the first sub-group being formed by the conjunctions proper, and the second by the articles.<sup>105</sup> In that case the term *fāfila* may be related to the Greek definition of the article, which was believed by some grammarians to serve as a sort of distinctive mark of the gender of the substantives, for instance by Diogenes of Babylon: 'The article is a declinable element of speech, which marks the difference in gender and number of the nouns, e.g. *há, hē, tó, hui, hai, ta*'.<sup>106</sup> The Greek word *dihorizon* (which marks) has the same meaning as the Arabic *fāfila*. It is not very surprising that Arabic grammarians regarded the article generally as a particle, since this word does not have any declension.<sup>107</sup>

The third group in Fārābī's division is formed by the prepositions, which are called *wāsiḍāt*, because they always stand between two substantives, or between a verb and a substantive. We do not know any equivalent in Greek grammatical terminology—the Stoic term *mesotēs* designates the adverbs. That Fārābī classifies prepositions

as particles is quite understandable within the Greek context: in Greek grammar, the prepositions formed either a separate category or a sub-group of the conjunctions (*sindesmōi prothetikoi*). In Arabic grammar many words which we would call prepositions are included in the category of the nouns under the name *ṣurūf*.<sup>108</sup>

The adverbs, *ḥawāṣṣ*, constitute the fourth category of Fārābī's particles. If this word is really derived from the radicals *ḥ-z-w*, the meaning of this term is 'filling up, stuffing'. In that case *ḥawāṣṣ* means the same as the Greek word *stotbai* used by the grammarian Tryphon to indicate the group of the conjunctions. Calling these words *stotbai* implies that they are redundant, and that they only serve to fill out speech, as it were.<sup>109</sup> *Ḥaṣw* in the sense of 'redundant word' is used by al-Kindī in the case of the word *inna*, which according to him has no real function in the sentence and is, therefore, unnecessary and redundant.<sup>110</sup> Weil asserts that *ḥaṣw* is a Kūfīan term, but we know from Zamakhsharī that the term was used by Sibawaihi to indicate a special class of expressions which contain a redundant word.<sup>111</sup> It is unclear how this root came to be used by Fārābī as a designation for the adverbs: most adverbs were called *ṣurūf* in later grammar, and were classified as nouns after the example of Sibawaihi.<sup>112</sup> For the classification of the adverbs as nouns there are parallels in Greek literature: Alexandros of Aphrodisias regarded the adverbs as nouns, and so did the Stoics in the case of adverbs derived from nouns.<sup>113</sup>

Fārābī's last category is formed by the conjunctions, *rawābiṭ*. This term seems to be a calque of the Greek *sindesmōi*; it persisted in

<sup>100</sup> Steinthal, 1891<sup>2</sup>, 2, 309.

<sup>101</sup> Apoll. Dysk. pron. 6, 10; 14, 18 et passim; cf. Steinthal, 1891<sup>2</sup>, 2, 309; Gätje, 1971, 15.

<sup>102</sup> E.g. b. Arb. Ins. 380, 25; 303, 4; Lum. p. 31; Zam. Muṣ. pp. 56-61; also *al-ṣar* Zam. Muṣ. 57, 3. Sibawaihi's theory of the relative clause: Mowal, 1973, 135 sqq.

<sup>111</sup> Weir, 1913, 72, n. (instead of the Egyptian *ḥga*); cf. Mahnizmi, 1958, 315). Zam. Muṣ. 57, 3 (in expressions such as *al-ḥaṣw al-munāfilāt* *ṣarf*, where the normal term is *ṣarf*). *Ḥaṣw* was also used to indicate the middle of the word, as against the end or the beginning (*ḥarf*, *awwal*, *muḥtasab*), b. Arb. Ins. 11, 23; b. Ġin. 132, 2, 329, 11 sqq.; 2, 337, 13. According to Ḥawārī, Maṣ. 44, 7, *ḥaṣw* in this sense was already used by al-Jāhiz.

<sup>112</sup> On the *ṣarf*: cf. above, chapter I, note 40.

<sup>113</sup> Scholia D. T. 520, 18 and Scholast., 1839, 45, n. 66.

for instance in *Qazālī*.<sup>15</sup> The difference between the Aristotelian and Stoic distinctions is that Aristotle defines the logical extension of general and individual nouns, whereas the Stoics are more concerned with the nature of the objects denoted by those nouns: some philosophers like Philoponos and Romanos even modified the definition by substituting the word 'substance' (*ousia*) for 'quality' (*poïotes*).<sup>16</sup>

The Stoic distinction disappeared from Greek grammatical literature, but it left some traces. Dionysios Thrax explicitly mentions the distinction between proper and common nouns, although he disagrees with it: 'The common noun is a subspecies of the noun'.<sup>17</sup> His definition of the noun is also interesting in this respect: 'A noun is a declinable part of speech ... which may be used generally or individually, generally like *anīrhōpos*, *hippos*, individually like *sōkratēs*'.<sup>18</sup> It will be noted that Dionysios uses the same paradigms as Diogenes did. The arguments adduced by the scholiasts in defending the distinction between proper and common nouns are purely grammatical, and probably not derived from Stoic sources.<sup>19</sup> They need not bother us here, but are more relevant in the discussion about the Arabic division of the parts of speech as compared with the Greek division.<sup>20</sup> Still, the discussion proves that the Stoic distinction was not lost totally, which is also apparent in the definition of the noun, attributed by Priscianus to Apollonios Dyskolos: 'A noun is a part of speech which shows the individual or general quality of the underlying concrete or abstract things'.<sup>21</sup> The influence of the Stoic distinction is also manifest in Latin grammar.<sup>22</sup>

In his *ihd' al-'ulūm* Fārābī describes the single words as follows: 'Some single words are names of persons, such as *zaid*, *'amr*; other

<sup>15</sup> *Qazālī* vs. *ihd'*: *Qazālī*, *Miftāḥ*, 37, 11-6; cf. 36, 3-4; 6-7; *ibid.* p. 10. Cf. *ibid.* 1956, 127.

<sup>16</sup> Choiseb., I, 106, 5-7 (cf. Sternthal, 1891<sup>2</sup>, 2, 239): 'A noun is a declinable part of speech, which assigns in each of *ihd'* underlying concrete or abstract things its general or individual substance' [G17]. Probably this Philoponos is *Philoponos* *an-Nahāḥ*, the philosopher-grammarian, cf. below, chapter VI, note 40.

<sup>21</sup> *Prisc. de XII vers. Aen.* 6, 95: *Nomen est pars orationis quae singularium corporum rerum vel incorporum sibi subiectarum qualitatem propriam vel communem manifestat*. On this definition: Schneider's remarks, *op. Apoll. Dysk.*, pp. 33-9; Sternthal, 1891<sup>2</sup>, 2, 240.

<sup>22</sup> Burwick, 1922, 10n.

(single) words denote the species and the genus of the objects, such as *insān* (man), *faras* (horse), *hayawān* (animal), *hayād* (whiteness), *sawdā* (blackness).<sup>23</sup> Fārābī's pupil and teacher, Ibn as-Sarrāḡ, introduced the distinction into grammar with his definition of the noun, the one quoted by Zakkāḡī: 'A noun is what signifies a meaning, and this meaning is an individual thing, or a non-individual thing'.<sup>24</sup> Connected with this definition is the one quoted from Ibn Kaysān: 'A noun is what indicates individuals, and what has a meaning of its own, such as *raḡul* (man) and *faras* (horse)'.<sup>25</sup> In this form, however, the definition can hardly be correct, since it only mentions the proper nouns (individuals), but with the examples for the common nouns. This does not make sense: we can hardly consider the words 'man', 'horse' representative for individuals (*aīdhā*). Somehow, the missing parts of the definition must be supplemented, namely the examples for the individual things, and the name of the group of words represented by the two examples given.

4. Nouns may be defined syntactically in that they may serve as the subject of a sentence, unlike the verbs or the particles, for instance in a definition ascribed to al-Aḥḡal Sa'īd ibn Mas'ada: 'A noun is that about which it is permitted (to say) "it helped me", "it harmed me"'.<sup>26</sup> There is a second version of this definition, quoted by Ibn Fāris,<sup>27</sup> which seems to be the original one.<sup>28</sup> The general meaning of the definition is very close to that of the definition reported by Ibn Fāris from Sibawaihi: 'A noun is that about which something is told'.<sup>29</sup>

<sup>23</sup> *Fār. ihd'* 11, 14-12, 2 [A23]; cf. *ibid.* 58, 12-39, 4: an alihdāi (literal translation of the Aristotelian text quoted above, note 12; here the examples are 'man', and 'zaid', 'amr' (the Aristotelian context leaves out 'horse'! On *anīrhōpos* vs. particulars in Islamic logic: Zimmermann, *Islamic philosophy*, 1972, 518, 527, and note 11 with quotations from Fārābī's *Sarḥ al-'Ulūm*).

<sup>24</sup> *Zakkāḡī* *id.* 50, 5-6 [A24]; cf. also *b. Arb. Arb.* 5, 19-20.

<sup>25</sup> *Zakkāḡī* *id.* 50, 12-3 [A25].

<sup>26</sup> *Zakkāḡī* *id.* 49, 12: the addition 'to say' is from *Zakkāḡī* himself [A26].

<sup>27</sup> *b. Fār. Sīb.* 50, 7-8.

<sup>28</sup> Instead of *huwa* *fihi* (it is permitted) the expression *haruma fihi* is used here, which is also used in another definition of the noun by al-Aḡḡal, *op. b. Fār. Sīb.* 50, 5-7. The same expression is two anonymous definitions of the verb, which are transmitted by Ibn Fāris, *Sīb.* 52, 11-2; 13-4 (cf. Tarnāz, 1969, 144), and in *Zakkāḡī*'s definition of the verb, *Gram.* 21, 13; 22, 2. 'To help' (*naf'e'a*) and 'to harm' (*ḡarra*) are possibly borrowed from a Qur'anic verse, *Qur'ān*, 22:12-3: this verse is discussed by al-Aḡḡal, *op. b. Fār. Sīb.* 592, 2-3. *Sarrāḡ* uses in a similar context the verb *a'faba* (to wonder), *ibid.* *Sīb. Kīr.* 1, 123, 7.

<sup>29</sup> *b. Fār. Sīb.* 49, 7-8 (*qal-lam huwa 'L-mushaddad 'amr*).

Another definition of the noun from al-Aḥḡaṣ, also mentioned by Ibn Fāris, may be quoted as well, since it not only includes the verbal, but also the adjectival predicates: 'When you find a word with which the verb and the adjective may be properly used, such as "Zaid stands", or "Zaid is standing", and when you find moreover that it has a dual and a plural, such as *zaidān*, *zaidūna*, and when you find that it cannot be conjugated, know then that it is a noun'.<sup>49</sup> These three definitions have in common that they are formulated in syntactic terms: a noun is characterized by the fact that it may be subject of a sentence. There is apparently a connection with the Mu'tazilite definition of 'thing' (*ṣay*): 'A thing is something about which something may be predicated'.<sup>50</sup> We know that al-Aḡḡaṣ was indeed a Mu'tazilite.<sup>51</sup>

Al-Aḡḡaṣ' definition met with critical remarks from other grammarians. Zaḡḡāḡī, for instance, does not accept it, since it does not include words such as *anna* (where?), *kaifa* (how?). About these words nothing can be predicated, but they are nevertheless reckoned among the nouns.<sup>52</sup> This criticism is also mentioned by Rāzī,<sup>53</sup> who defines the noun as 'something about the meaning of which something can be predicated'.<sup>54</sup> He remarks: 'Some people object to the words "noun is that about which you can predicate something", since, as they say, "where", "when", "how" are nouns, but you cannot predicate something about them. 'Abd al-Qāḡir, the Grammarian, gave the following answer to this: When we say "noun is that about which you can predicate something", what we intend to say is: "(noun is) that about the meaning of which you can predicate something". As a matter of fact, it is possible to predicate something about the meaning of *iqḡ* (when), since when we say *ʔatika ʔlā fulān at-tam* (I will come to you when the sun rises), the meaning is *ʔatika waḡi fulān at-tam* (I will come to you at the time of the rising of the sun). About the word *waḡi* (time) you can predicate something, as is proved by the

<sup>49</sup> b. Fār. Sāb. 30, 5-7 [A 27].

<sup>50</sup> This definition of *ṣay* stems from the Stoic tradition. cf. Reischer, 1966, 69-70, and below, chapter VII, note 33.

<sup>51</sup> Cf. chapter VII, note 10.

<sup>52</sup> Zaḡḡ. ʔp. 49, 14-30, 4; 'Uḡb. Maṣ. 54-7.

<sup>53</sup> Rāzī, Maṣ. I, 33-4.

<sup>54</sup> Ib. I, 34, 13; the complete form of the definition ib. I, 33 gen.: 'The word which allows predication about itself and with itself is a noun', as against the verb which allows only predication with itself, not about itself, and the particle which allows neither. Cf. the Baḡrian doctrine, reported by Ibn al-Aḡḡaṣ, ʔp. 2, 13 sqq.

expression *ʔaba 'i-waḡi* (the time is good).<sup>55</sup> This discussion is continued in 'Uḡḡarī's *Masā'il ʔilāfiyya*; after reproducing 'Abd al-Qāḡir's argument, 'Uḡḡarī tries to refute it. His conclusion is that adverbs are nouns, but that it is nevertheless impossible to predicate something about them.<sup>56</sup> This conclusion makes al-Aḡḡaṣ' definition unacceptable to him.

II. According to Zaḡḡāḡī the only correct definition of the noun, if one is to work along grammatical standards, is his own definition: 'A noun in the language of the Arabs is something active (*ʔāʔil*) or passive (*maʔʔil*), or what takes the place of something active or passive'.<sup>57</sup> There are other definitions, he says, but those are correct only from a logical point of view. At first sight, he seems to define nouns in terms of 'subjectivity' and 'objectivity'; in that case his definition would be a syntactic definition, just as the definition of al-Aḡḡaṣ mentioned above. But Zaḡḡāḡī quotes al-Aḡḡaṣ' definition as an example of a definition in terms of 'subjectivity' (*naḡḡh 'alā 'i-muḡḡada*).<sup>58</sup> and he criticizes it for precisely this reason: adverbial nouns can never be the subject of a sentence: still, they are nouns. This suggests that we should interpret Zaḡḡāḡī's definition differently, and that the terms *ʔāʔil* and *maʔʔil* do not denote activity and passivity in a grammatical sense, but in a physical sense.<sup>59</sup>

<sup>55</sup> Rāzī, Maṣ. I, 33 [A 28]. Cf. 'Uḡḡarī, Maṣ. I, 34, 2-7. The 'Abd al-Qāḡir the Grammarian who figures here and is 'Uḡḡarī's opponent is 'Abd al-Qāḡir ibn 'Abd al-Rahmān al-Gurghān al-Nahḡī, the author of *Daḡā'ir al-ʔaḡḡar* and *ʔarḡ al-balaḡ* (d. 1078-87) cf. Brockelmann, GAL I, 341, 81, 583, Say. Buḡya, 2, 106, nr. 1557. He also wrote a *Maḡḡaḡ* ʔi ḡḡḡ, but that may be Fāris's *ʔḡḡ*.

<sup>56</sup> 'Uḡḡ. Maṣ. 53; he uses the same arguments as Zaḡḡāḡī does, ʔd. 51, 14-52, 8, in his answer to those who criticize Muḡḡarad for this definition (an argument in terms of general principle and exception to the rule).

<sup>57</sup> Zaḡḡ. ʔp. 48, 6-7 [A 79].

<sup>58</sup> Zaḡḡ. ʔp. 49, 13, cf. above.

<sup>59</sup> This notwithstanding the fact that the same terms are used elsewhere in a grammatical sense. Ibn al-Aḡḡaṣ tells us that one of the characteristics of the noun is that it may be active or passive, e.g. in the sentence *ʔaraba zaḡḡan 'amran* (Zaid hit 'Amr); what he means is that a noun may be subject or object of a sentence (ʔar. 6, 6-7; cf. also Rāzī, Maṣ. I, 34, 17). *ʔāʔil* and *maʔʔil* do not correspond exactly to our 'subject' and 'object' in the sentence *ʔaraba zaḡḡan* (Zaid was hit) *zaid* is the *maʔʔil* in Sibawayḡ's terminology. cf. Mosel, 1974, 246-7. Zaḡḡāḡī himself uses *ʔāʔil* and *maʔʔil* in another definition of the noun in their grammatical sense, *ʔar. 17, 6-7* 'A noun is that which may be used as a subject (*ʔāʔil*) or as an object (*maʔʔil*) ...' [A 30]. The difference with the definition in the *ʔḡḡ* is emphasized by the words '... which may be used ...'. In the *ʔḡḡ* Zaḡḡāḡī deals with the possibilities of the syntactic use of the noun, not with the nature of the substances denoted by it, which are always active or passive.

In order to clarify this we would like to call in evidence a few Greek texts. Dionysios Thrax: 'A noun has two dispositions, action and passion, e.g. *kritēs* (a person who judges), *kritós* (a person who is judged)',<sup>39</sup> Scholia on Dionysios Thrax: 'It is always the substance which is doing something or undergoing something, whereas the verb signifies the action or the passion',<sup>40</sup> Apollonios Dyskolos: 'The noun precedes the verb of necessity, since to act or to be acted upon is characteristic of the body, and the giving of names concerns the bodies. From the names is derived the characteristic property of the verb, namely the action and the passion',<sup>41</sup> Being active or passive, according to these definitions, is something characteristic for substances, which are represented in speech by the nouns. Verbs represent the actions of the substances.

This suggests that Zaggāgi's definition must be explained in the following way: there is a well-known *dictum* about nouns signifying substances, and verbs actions; we know that substances are the agents of the actions which are indicated by the verbs (or, indeed, the objects of such an action by another substance); we may conclude, then, that nouns are characterized by the fact that they are active or passive. This definition is connected with the discussions about the priority of nouns,<sup>42</sup> and we may deduce from its existence that the doctrine according to which nouns signify substances, and verbs actions—which in why nouns are prior to verbs—was known in the Arabic world, even though the specific formula is not found in these discussions. What we have here is probably a Stoic doctrine. The Stoics asserted that every substance is a body, and that activity and passivity are among the essential attributes of the bodies.<sup>43</sup> This Stoic dogma is found in the

<sup>39</sup> Dion. Thr. 46, 1-2 [G19].

<sup>40</sup> Scholia D.T. 515, 16-8 [G20]; cf. 215, 28-30.

<sup>41</sup> Apoll. Dysk. synt. 18, 5-8 [G21]; cf. Steinthal's translation, 1891<sup>2</sup>, 2, 233: 'Das *ὄνομα* aber geht dem *ῥήματι* voraus, weil das Bewirken und Bewirkwerden dem Körper angehört, und auf die Körper auch die Gebung der Namen erstreckt, aus denen sich die Eigentümlichkeit des Verbums, nämlich das Tun und Leiden, erst ergibt'.

<sup>42</sup> Cf. below, chapter VII, n. 88.

<sup>43</sup> Cf. SVF 2, 359; body (*soma*) and substance (*ousia*) are identical; ib. 2, 363: something without a body (*ἡ ἀνέστανον*) is unable to act or to suffer; on the 'dynamic concept' of the Stoic bodies, Sembrunsky, 1971<sup>2</sup>, 95-6. The doctrine that only bodies possess existence was introduced into the Arabic world under the influence of the Stoics, cf. Jadaane, 1968, 137-47, for the connection between Nagjām's theories and Stoic materialism; Horowitz, 1903 (Nagjām held that atoms can be divided infinitely, and that a body is nothing more than an assembly of accidents, which are corporeal, cf. Nader, 1956, 155-8); on Mu'tazilite materialism in general: Nader, 1956, 150-67.

Arabic translation of the *Placita philosophorum*: 'Everything which acts or is being acted upon is a body',<sup>44</sup> But, of course, an explanation of the difference between nouns and verbs in terms of action and passion is quite common: we find it as early as Plato.<sup>45</sup> Our conclusion that this definition of nouns really deals with substances rather than with nouns themselves, is confirmed by the fact that apparently the objection to al-Aḥḥās' definition is not applicable: substances denoted by words such as *kalfa*, *alma* are actually regarded as something active or passive, which makes them fall under this definition.<sup>46</sup>

In the Greek world there was no definition of the nouns similar to the one proposed by Zaggāgi, since Greek grammarians did not combine data from the discussions about the hierarchy of the parts of speech with the definitions of these parts of speech. It is evident that we are here concerned with a definition which is completely different from the Aristotelian tradition: not only from a terminological point of view, but also with regard to the substance of the definition: Aristotle is interested in the linguistic properties of the *definendum*, e.g. the noun (nouns do not have tenses, nouns are conventional signs, no part of a noun is meaningful in itself). This definition, however, tries to define the nature and the physical properties of the objects denoted by the *definendum*, e.g. substances (substances always play an active or a passive role in the actions denoted by the verbs).

In his *Rhetorica* Aristotle uses the term *hellenizein* in the sense of 'speaking uncorrupted Greek without using wrong words or making grammatical mistakes'.<sup>47</sup> It is on this use of the word that Merx bases his identification of the word *ḥāb* (declension) with *hellenismós*, but he does not explain the difference in meaning: although the identification of the two words as to form may be correct—both words are causatives with the same lexical derivation—the difference in technical meaning cannot be explained away. The term *hellenizein* as it is used by Aristotle—who does not use the substantive *hellenismós*—has a much wider range than the Arabic term, which only means 'declension of nouns and of those verbs that resemble nouns'. The solution

<sup>44</sup> Plac. Phil. 277, 16 [A31].

<sup>45</sup> Plato, Soph. 262 A: 'the sign for the actions is what we use to call *ῥήματα* ... and the phonetic sign for those who perform these actions *ὄνομα*' [G22]; cf. also the discussion about the priority of the nouns, below, chapter VII.

<sup>46</sup> Cf. above, note 31.

<sup>47</sup> Aristot. rhet. III, 1407 a 20.

may be that Mera wrongly based his argumentation on the Aristotelian use of the word exclusively, and that he disregarded later developments in Greek grammar. In order to clarify this we must turn to Sextus Empiricus, who tells us a good deal about later grammar—he lived about 150 A.D.—notwithstanding his critical attitude towards grammar as well as all other dogmatic disciplines. Sextus says: 'They (sc. the grammarians) compose general theorems, and from these they pretend to be able to judge about every single word, whether it is Greek or not'.<sup>48</sup> These general theorems<sup>49</sup>—also called *kanōnes*—formed the core of the so-called *Téchnai perì hellēnismōi*; they were meant at first as a description of the actual state of the language, but soon became normative rules for teaching purposes. As the *téchnai* were primarily concerned with the declension,<sup>50</sup> the word *hellēnismōs* itself came to be used in the sense of 'declension': one may compare with this the Stoic definition of the word *hellēnismōs*: 'Correctly inflected speech in the civilized, and not in the vulgar way of speaking'.<sup>51</sup> Considering the fact that the word *kanōnes* has been arabicized by the Arabic grammarians (*qānūn*, plural: *qawānīn*), we believe that those treatises about flexion somehow served as a model for the first attempts of the Arabic grammarians to describe their own language. The imitation of the *kanōnes* which is found in the fragments of Jacob of Edessa may have played an intermediary role in this respect.<sup>52</sup>

We have a description of such a treatise which determines the flexion of nouns and verbs by means of *qawānīn*, in the section about grammar in al-Fārābī's *Kitāb al-Uṣūl*:<sup>53</sup> 'Then, is (sc. the *qānūn*)

<sup>48</sup> Sext. Emp. adv. math. 1, 221 (G 23).

<sup>49</sup> For this meaning of *kanōtikos* and the difference between *kanōn* and *kanōtikos*, see Sext. Emp. adv. math. 9, 8 = SVF 2, 224. In Latin grammar we have Varro's *universum discriminarum*. De L. L. 10, 8 sqq. and Chas. 65, 16 sqq.

<sup>50</sup> Barwick, 1922, 182: 'Es muß also einen Typus grammatischer Lehrschrift (*technai perì hellēnismōi*) gegeben haben, der die Darstellung der Flexion zum Gegenstand hatte mit der ausgesprochenen Absicht Regeln für den richtigen Sprachgebrauch (*hellēnismōs, katallaxis*) an die Hand zu geben'.

<sup>51</sup> Diog. Laert. 7, 39 (G 24). For the word *adēphros* in this definition, cf. Liddell & Scott, s.v., especially the quotation from Apoll. Dysc. proo. 109, 23, where the word is translated as 'not being the cases at random'; cf. Steinthal, 1891<sup>2</sup>, 2, 121, 126.

<sup>52</sup> Mera, 1889, 56-62. Jacob of Edessa followed the example of Dionysios Thrax and Theodoretos. We will not enter here into the question of the relationship between these Syriac *kanōnes* and al-Fārābī's description of the *kanōnes*.

<sup>53</sup> The rest of Fārābī's section about grammar also shows a remarkable influence of Greek terminology, cf. *Uṣūl*, p. 14 (= *parahēsimenai*); *naṣṣāh*, 14, 14 (= *prōsōpa*, cf. Daiber, 1968, 25. The Syriac term *parāpā*, Mera, 1889, 17, 19; Tarnāh, 1969, 115, is a transliteration of the Greek word); *taṣarruf* (= *kūsis*), cf. below, chapter III C.

teaches us in which case which ending is attached to each noun and each verb; then, it enumerates briefly the cases of the singular nouns, case by case, for those nouns that are declinable and can receive in each case one of the endings; then, it does the same for the feminine, the dual, and the plural nouns; then, it gives the same list for the singular, the dual, and the plural verbs, until all cases which change the endings of the verbs have been exhausted; then, it informs us which nouns are only declined in some cases, and in which cases they are declined, and in which they are not; then, it informs us which nouns have only one case-ending, and which ending each of these (nouns) has'.<sup>54</sup> This description corresponds exactly to the Greek *kanōnes anomatikai* and *kanōnes rhēmatikai*, as we know them from Theodosios, even in the distinction of words which are declined only in one case, or only in some cases.<sup>55</sup> The order of the Fārābīan flexional tables is the same as the one we know from Greek examples. This proves that there still existed at this time traces of the Greek flexional tables with general rules about the flexion of nouns and verbs. The general character of these rules is correctly defined by Ibn Haldūn: 'They (sc. the scholars) extracted from the course of their own speech general rules ..., and by means of these rules they judged about the rest of the forms of speech, and they attached similar endings to similar words'.<sup>56</sup> Viewed in this light the difference between the Aristotelian *hellēnismōs* and the Arabic *ʿrāb* is no longer a problem: *ʿrāb* in fact translates the *hellēnismōs* of later Greek grammarians.

Our explanation does not take into account the explanation of the Arabic grammarians themselves. They translate *ʿrāb* as 'explanation' (*bayān*).<sup>57</sup> In their view the *ʿrāb* is the focal point of grammar, which gives the Arabic language its clarity—even to the point where some of them believe that the Arabic language is the only language to possess an *ʿrāb*.<sup>58</sup> *ʿrāb* in the sense of 'declension' is defined as follows: declension is a vowel at the end of the word that indicates the meanings (sc. the grammatical meanings<sup>59</sup>). It should be added that

declension is a semantic, not a phonetic matter, or, to put it in Rāzī's words, 'the declension is a rational, not a physical state'.<sup>60</sup> This was recognized already by the scholiast on Dionysios Thrax, who says: '(it should be known) that the five cases are a matter of meaning, not of sound'.<sup>61</sup>

Words with a complete declension (triptotic words) are called in Arabic grammar from the time of Sibawaihi *munṣarif*, words with an incomplete declension (diptotic words) are *ḡair munṣarif*.<sup>62</sup> As the nunation indicates the complete declension,<sup>63</sup> in some cases *ṣarf* and *ṭarḥ* are very close to each other in meaning.<sup>64</sup> We believe that the term *ṣarf* is connected with the Greek word *khlisis*, although the exact relation between the two terms is very difficult to trace.

Two things are more or less certain. In primitive Arabic grammar the term used for 'declension' was *ṭarḥ*, in our view a calque of the Greek *hellenismós*. On the other hand, in philosophical circles the terms *ṣarf* and *ṭarḥ* are consistently used for all morphological changes of nouns and verbs, but this term is, of course, found only after the first translations of Greek writings had been made. We find, for instance, in Muṭṭā ibn Yūnus' translation of Aristotle's *Poetics* the term *ṭarḥ* as the translation of the Aristotelian *prōsis*, i.e., the inflection of both nouns and verbs.<sup>65</sup> Ibn Suwār tells us: 'Inflection (*ṭarḥ*) is a sound added to the word and consisting in a vowel that is added to the first case (*istiqāma*) ... and there are five kinds of inflection (i.e., five cases), as I have mentioned in the *De Interpretatione*'.<sup>66</sup> The name is said by al-Fārābī who distinguishes between nouns in the first case (*mustaqīm*) and inflected nouns (*ma'fūl*); both nouns and verbs have inflection (*ṭarḥ*).<sup>67</sup> It is obvious that we are

(*ma'fūl*) alternate on the words (*al-tawīla* *ḥād* 'ta-wīl'); they are equivalent to Rāzī's 'states that occur to the nouns' (*al-ḥāl* 'ḥāl' 'al-ḥāl'), *Ma'* 1, 43, 7 sqq. *Zaḥr* 1d, 69, 4 sqq. gives examples of these meanings.

dealing here with a direct translation of Greek words, where *ma'fūl* stands for *enklōmēnē*, *mustaqīm* for *orthós*, and the term *ṭarḥ* itself for the word used by the Greek commentators of the writings of Aristotle and the Alexandrian grammarians alike, namely *khlisis*.<sup>68</sup> The *ṭarḥ* is an imitation of the Greek declension, e.g. inflection, as is evident from the five cases given by Ibn Suwār.

In Alexandrian grammar *khlisis* was used for the morphological changes of nouns and verbs, whereas other (analogical) changes of words were indicated by the term *paragōgē*.<sup>69</sup> In the Stoic-Pergamene type of grammar, *khlisis* was used for every change of a word, be it regular or irregular.<sup>70</sup> Later distinctions allowed to nouns a *prōsis* and a *khlisis*, but to verbs only a *khlisis*:<sup>71</sup> verbs are *apōtē*, just as, for instance, adverbs and prepositions.<sup>72</sup> Among the nouns there are also those with only one case (*monōprōta*), e.g. the name *ho abrahām*; nouns are called *akhlis*, when they miss some of their cases.<sup>73</sup>

According to the Arabic grammarians, only nouns are declinable (*ma'fūl*), whereas verbs have no right to declension, although they do have an inflection (*ṭarḥ*).<sup>74</sup> On the other hand, nouns are divided into those which are fully declined (*munṣarif*), and those with only two cases: the latter category is called *ḡair munṣarif*, and it seems that we have here the equivalent of the Greek term *akhlis*, which we have mentioned in the preceding paragraph. The Arabic theory, according to which nouns lose something of their declension on

<sup>68</sup> Islamic philosophy, 1972, 521 sqq.

<sup>69</sup> Barwick, 1957, 34.

<sup>70</sup> This was precisely the reason why the debates about analogy and nounhood were so fruitless: both parties disagreed as to where analogy was to be demonstrated, cf. Barwick, 1922, 179 sqq.

<sup>71</sup> Cf. scholia D.T. 549, 33, on the question why the terms *khlisis* and *prōsis* are used for the nouns, but only the term *khlisis* for the verbs. Unfortunately the answer has not been preserved in the manuscript. It is difficult to find out what exactly a *khlisis* of the nouns is. From the way Apollonios Dyskolos uses the term it appears that *khlisis* denotes every morphological change of either a noun or a verb, and that *prōsis* is the special name for a *khlisis* of a noun.

<sup>72</sup> Steinthal, 1898<sup>2</sup>, 2, 224-6.

<sup>73</sup> Scholia D.T. 231, 12-5: 'How does the *monōprōton* differ from the *akhlis*? (Answer.) The *monōprōton* receives only the article, e.g. *abrahām*, but the *akhlis* is a word which neither receives (fully) the article, nor does it have a complete declension, e.g. *oír* (our), *dōmōr* (statute)' (G.25). Also Apoll. Dysk. syn. 47, 8: adjectives like *oírōi* (swell), which are used as adverbs, become *akhlis*, thus imitating the undeclinability of the adverbs - this is the only trace in Greek grammar of a theory of resemblance (cf. below). Cf. also Chomsk. 1, 341, 24-27 (on the names of the letters).

<sup>74</sup> *Zaḥr* 1d, 80, 7-8; 101, 5-6 (a quotation from Ta'lab).

account of a resemblance to the verbs or the particles, was, however, unknown in Greek grammar.

*Ṣarf* and *ṭarīf* have yet another meaning in Arabic grammar. The science of *ṣarf* is defined as the science of the phonetic forms of words and their changes, apart from those changes that are caused by declension. We may cite the following definitions: 'It (sc. the *ṣarf*) is the science of the roots, by which we know the various phonetic forms of the words, apart from the declension' (Ibn Ḥāǧib);<sup>77</sup> 'It is the knowledge of the root of the word, and its additions, elisions, and changes' (Ibn al-Aǧīr).<sup>78</sup> Apparently *ṣarf* could indicate every change of the word in general, i.e., almost the same meaning as the Pergamene use of the word *klisis*. Perhaps this may be explained by the fact that in Arabic as well as in Greek grammar *pidisis/frōh* was reserved for the nouns, so that its opposite *klisis/ṣarf* could obtain the double meaning of 'inflection of the verb' and 'derivation in general'. Whatever the case may be, it seems rather probable that *ṣarf* is the translation of the Greek term *klisis*, since both words indicate a departure from the original meaning or *ḥaqīqah* of the word – the original meaning of *klisis* is 'bending, inclination', normally in a downward direction, but also aside, whereas *ṣarf* means 'turning away, averting'. In philosophical grammar this change in meaning by means of a phonetic change applies to the declension of the nouns and verbs: in grammatical works it refers either to the inflection, or to every change apart from those caused by declension. When the word is used in this second sense, it has a sub-category, '*adl*', which indicates more specifically analogical derivation of one form from another: Ibn Ġinnī says that '*adl* is a kind of derivation (*ṭarīf*), which consists

in a change of the root from its primary meaning to a secondary one.'<sup>79</sup>

'*Adala* in its sense of 'to derive analogically from' represents the Alexandrian term *paragein*, as against the term *ṭarīf* (i.e., the Greek *klisis*), which is restricted to the inflection. In the Stoic-Pergamene system, on the other hand, *klisis (ṭarīf)* is used for every sort of derivation, including declension and inflection.'<sup>80</sup> A few examples of the use of '*adala* in Arabic grammar are: (Ibn Ġinnī) the form *fa'dl* is derived from the form *fa'll* by means of '*adl*';<sup>81</sup> (id.) the form *fa'dli* is derived from the form *fa'la*;<sup>82</sup> (Farrā') *agmā'una* is derived from (*ma'dūl 'an*) *agma*;<sup>83</sup> (Ta'lab) *ṣabūr* is derived from the verb *ṣabara*;<sup>84</sup> (Ibn Maǧā) the nouns which are derived from the participles.<sup>85</sup> These examples are all in accordance with the Alexandrian use of *paragein*: they are all cases of derivation, not of declension or inflection. On the other hand, in philosophical grammar we find for instance with al-Fārābī that verbs (*kalām*) are changed (*yū'dalu ḥādū*), so that they become commands or prohibitions (*amr aw nahy*).<sup>86</sup> Here we find '*adl* applied to the verbs.

The Arabic name for the first of the nominal cases is *raf'*, i.e., 'lifting'. In 1889 Merx pointed out the similarity between this term and the Greek name for the first case, *orthē prōtis*, but he did so not without reservation: 'Potestne credi hoc casu esse factum, et negari in seligendo nomine *raf'u* Arabes doctrinam Peripateticorum esse secutos, quam a commentatore aliquo Aristotelico didicerunt? Nihilominus vero mihi nondum constat, nomen *raf'u* nihil esse nisi interpretationem vocis *orthē* vel *euthela*, nam si *raf'u* graecum esset, etiam reliqua casuum nomina ex graecis processisse coniciendum esset, quod probari nequit'.<sup>87</sup>

In the first place we must remark that Merx attributed every similarity between Greek and Arabic grammar in the early period to Peripatetic influence; he did not look for similarities between living

<sup>77</sup> b. Ḥāǧib op. Antatibāḥ, *Ṣarf an-nadl 'alī 'l-Ṣarfyya*, ed. M. N. al-Hadad, Qāhira, 1338 A.H., 1, 2, 1 [A.35].

<sup>78</sup> b. al-Aǧīr, *al-Mufaḥḥis an-nadl*, ed. M. N. 'Abd al-Jawād, Qāhira, 1358 A.H., 1, 12 [A.36].

<sup>79</sup> Both this definition and the one quoted in the preceding note are quoted by 'Ubbidī, 1964, 98-9, who discusses several other definitions, as well as the place of *ṣarf* within grammar. Compare Flügel's note 1882, 134, note 2. On the etymology of *ṣarf*: 'Ubbidī, Mas. 106-9. We are not concerned here with another use of *ṣarf*, namely in Kūfian grammar, where this term is used for the procedure that causes the apposition in sentences such as *lā yā'kul an-namāḥ wa-taḥabhu 'l-lahm* ('don't eat fish, while you are drinking milk'), cf. b. Anb. Ios. 229-30; Farrā', Ma'dūf 1-Qur'ān. 1, 33, quoted by Mubārak., 1963, 323 with further discussion. Cf. also Carter, 1973, who tries to show that it is incorrect to attribute the term *ṣarf* in this sense to the Kūfians exclusively. According to him Farrā' and Sibawayhi (Klt. 1, 424-7) to a large extent agreed as to the nature of this principle, which is called *ḥādū* by Sibawayhi. Later Bagrian grammarians rejected it, and it was, therefore, attributed to the Kūfians. On the *ṣarf/ḥādū*: Reckendorf, 1921, 462; de Sacy, 1829, 217-9; Mahdāmī, 1958, 293 sqq.; Mosel, 1973, 57-8.

Greek grammatical practice and Arabic grammar. In the case of the names of the nominal cases we have a good example of the difference between the two influences, since the Aristotelian tradition forced its own names upon the Arabic translators and upon those philosophers who based themselves on Greek material, namely *mustaqim* for Greek *orthós*, and *ma'īl* for Greek *enklínomenos*. These are the terms used by Fārābī.<sup>84</sup> It is obvious that Fārābī did not adhere strictly to the Peripatetic doctrine, which considered the nominative as the *mustaqim* form, and the rest of the cases as declension (*ptōsis*), but rather followed the Stoic tradition, which considered the nominative as the first of the nominal cases.<sup>85</sup> This has been pointed out by Zimmermann, who may be right in attributing this departure from the Aristotelian tradition to the discussions by Greek commentators concerning this point.<sup>86</sup> On the other hand, it is also possible that Fārābī heard something about Greek grammatical practice, possibly via the Arabic and Syrian translators, who were active at Baghdad during his lifetime. We have seen above that *al-Fārisī* sometimes uses elements from Greek grammar, which cannot be derived from translations of Aristotelian writings.<sup>87</sup>

For an explanation of the grammatical names of the nominal cases we cannot resort to the translations in all, but must base ourselves on the data from Greek grammar. We do not believe that it is possible—given the present state of our knowledge—to prove any connection between *raf'* and *orthé-ptōsis*. Marx is certainly right when he says that when there is a connection between the name of the nominative in Greek and Arabic grammar, we expect the same connection to exist in the case of the names of the other cases. His own efforts to prove that connection seem rather farfetched,<sup>88</sup> so that the question remains undecided. The only additional observation we would like to make is of a very hypothetical character: all Arabic names for the cases taken together could give the picture of a noun being erected (*marfū'*), which is then pulled aside (*maḡrūr*), and finally brought down

(*manṣūb*?),<sup>89</sup> in other words the same metaphor as in the Greek *ptōsis*, which begin with the *orthé* and end with the *ptōsis*.<sup>90</sup> We must concede, though, that the evidence is rather meagre. Perhaps the explanation of the Arabic grammarians of the names of the cases in terms of the articulatory movements needed for the pronunciation of the case-endings is correct after all.<sup>91</sup>

Although there seems to be no connection between the Greek and the Arabic name for the genitive, there is a similarity in functions. The genitive indicates the *idāfa* (adjunction, annexion), and the *idāfa*, according to Zaḡḡālī, has three functions: it joins something to its owner; it joins something to the person who has a right to it; it joins something to its genus.<sup>92</sup> We are reminded by these three functions of the three names the second case may have in Greek grammar:<sup>93</sup> the second case may be called *kreitikhē* (case of possession); *patrikē* (case of fatherhood); *genikē* (interpreted as 'general case', 'case of the genus', 'case of the root').<sup>94</sup>

Nouns and particles may be said to be dependent (*mu'allaq*) on other words:<sup>95</sup> the meaningful particle, for instance, is said to be always dependent.<sup>96</sup> A second meaning of the word is 'being in suspense, not yet terminated', when it is said about a sentence which has not yet been completed and still misses an essential part.<sup>97</sup> In that case the term is almost synonymous with the term *nāqiz* (as against *adwān*) used by Ibn Ginnī.<sup>98</sup> Finally the word *mu'allaq* is also used for the creation of the words, which are said to have been 'hung up' on the things.<sup>99</sup> Ibn Maḡlī explains the first meaning

<sup>84</sup> For the lexical signification of the terms we refer to the *Liḡn al-'Arab*, pp. vv.: *raf'* is the opposite of *baḍī* (II. 129 right); *zarr* is explained by the word *ḡaḍḡ*, i.e., 'pulling aside' (II. 4 right 9); but *zarr* means 'standing erect' (I. 760, left 12; cf. Siehaby, 1975, 78, note 7).

<sup>85</sup> For the meaning of the Greek term *ptōsis*: Sittig, 1931; Hiersche, 1933; cf. also Pohlenz, 1939, 169-71.

<sup>86</sup> E.g. Zaḡḡālī, I, pp. 93-4; Serrano, 1968, 19.

<sup>87</sup> Zaḡḡālī, I, 106, 10 nqq., cf. h. Gin. Hqs. 3, 26, 9 nqq.

<sup>88</sup> E.g. scholia D.T. 384, 1-7.

<sup>89</sup> For a discussion about the meaning of the term *genikē* we refer to: de Mauro, 1965, appendix I (pp. 206-8); also Pohlenz, 1939, 172-3.

<sup>90</sup> Cf. Zaḡḡālī, I, 22, b. b. Kars. ap. Suy. *Ḥam' al-ḥawāṣir*, 1, 140 (quoted by Duf, 1968, 251); h. Gin. Hqs. 3, 107, 1-2, 3, 170, 2; 3, 256, 1; 3, 270, 10, with other forms from the same root (*idāfa*, *idāfa*, *idāfa*).

<sup>91</sup> Muḡlī, ap. Zaḡḡālī, I, 222, 11.

<sup>92</sup> Maḡlī, ap. Suy. *Ḥawāṣir*, 1, 463, 7.

<sup>93</sup> Cf. above, chapter II (the distinction between *ḡarī* and *ḡarī*).

<sup>94</sup> E.g. by Ibn Ḥazm, I, 1, 261, 13: *idāfa* 'ad' ... (to be created in order to signify ...).

<sup>84</sup> Far. Šarb, 64, 15 (as synonym for *ma'īl* the term *mustaqim*); Ibn Sarrī, 365, 5 (only *mustaqim* as against *maḡrūr*). According to Zimmermann (Islamic philosophy, 1972, 540, note 14) these terms were used only in the Baghdad school of translators.

<sup>85</sup> Cf. Steinhilber, 1890\*, 1, 303-4; Schmidt, 1839, 59-60; Pohlenz, 1939, 169; cf. the discussion in the scholia D.T., 230, 24-33; 546, 15-548, 5.

<sup>86</sup> Zimmermann, Islamic philosophy, 1972, 521-2 reflecting to the discussion by Stephanos, 10, 22-39.

<sup>87</sup> Cf. above, note 33, and chapter III A (Fārābī's division of the *ḡarī*).

<sup>88</sup> Marx, 1889, 152-3.

of the term, when he tells us that the grammarians use the verb *a'mala* to indicate the word that governs a nominative or an accusative, but the verb *'allaqa* to indicate the word that is connected with a genitive. He himself cannot accept the first verb, because as a Zāhirite he does not acknowledge any human action at all, and human action is implied by the use of the verb *a'mala*, when we are talking about a grammatical subject or object.<sup>102</sup> Ibn Maḍā' uses, therefore, *'allaqa* in all cases, since this verb indicates only a statement about an established syntactic situation.<sup>103</sup> In Greek grammatical terminology the verb *aristhai* is used with the same sense as the first meaning of *mu'allaq*, namely 'to be dependent on', for instance by Apollonios Dyskolos.<sup>104</sup> There are also expressions with the verb *kremasthai* (to hang), which remind us of the second meaning of *mu'allaq* e.g., *kremastai ho logos* (speech is in suspense, is not yet complete).<sup>105</sup>

### C. THE VERB

Three types of definitions may be distinguished in Arabic grammatical literature.

1. In the first place there is the morphological definition, which lists those morphological characteristics of the verb that mark it as different from the noun and the particle. Some of these characteristics are negative, e.g., the verb has neither dual or plural, nor a feminine gender;<sup>1</sup> some characteristics are positive, e.g., the verb may have a personal suffix attached to it, and it may be used in combination with temporal adverbs, such as 'yesterday', 'tomorrow', i.e., it can indicate time.<sup>2</sup> Those definitions that mention positive characteristics

<sup>102</sup> Cf. below, chapter VIII, note 23.

<sup>103</sup> b. Maḍā', Radd, p. 107.

<sup>104</sup> Apoll. Dysk. synt. 24, 1-3, 72, 10; 120, 12; 421, 9; 463, 4.

<sup>105</sup> Cf. Liddell/Scott, s.v.

<sup>1</sup> Cf. ap. b. Fār. Šāh. 52, 9 [A37] 'the verb is that which is prevented from (receiving) the dual and the plural'; b. Abb. fng. 40, 12-9 [A38] 'the verb cannot be made feminine, only the noun'. For the term *unfem* (*unfemā'a*): cf. Muḥammad's definition of the noun, above, chapter III B, note 5. Note that it is the subject of the verb that is made dual, plural, feminine, not the verb itself.

<sup>2</sup> Cf. ap. b. Fār. Šāh. 52, 11 'the verb is that which is correctly combined with -ar, e.g. *qamra* (I stood up), *alshakra* (I left)' [A39]; ib. 52, 13 'the verb is that which is correctly combined with *awā* (yesterday) and *ghadā* (tomorrow)' [A40]; cf. Zegg. Gram. 21, ut. - 22, 2.

often contain the words *ḥasana an* ... (it is correct to ...); these words seem to be typical of the definitions of al-Aḥfas.<sup>3</sup> Sibawaihi gives the indication of time as one of the characteristics of the verb.<sup>4</sup>

2. In the second place, there is a group of definitions which are not concerned with the characteristics of the verb or with its function, but with the nature of what is signified by the verb. These definitions have been influenced by Aristotle's definition; they will be discussed in the chapter about the influence of logic.<sup>5</sup>

3. Finally, there are definitions which define the syntactic function of the verb: it is always used as a predicate, but it cannot have a predicate itself. That verbs serve as predicates in the sentence, had already been mentioned by Aristotle; still, we believe this type of definitions to have been formulated under the influence of Stoic theories. The definition of the verb as an attribute which cannot receive any attributes itself (*ṣifa ḥayr maṣūf*) stems from a very old non-arianstorian tradition which regards the verb not as something that denotes an action as well as the time of that action, but as one of the two components of a complete sentence, namely the predicate.

Subject and predicate are called by Fārābī *maṣūf* and *ṣifa*.<sup>6</sup> He also mentions as synonyms *musnad ilāhi/musnad bihi* and *muḥtar 'arḥu'* *muḥtar bihi*, *ḥabar*. The first set of synonyms is used by Sibawaihi,<sup>7</sup> but the subject is normally called by him *muḥtada*. The second set is found in the definitions of noun, verb, and particle in the Bayḥan *al-fuṣṣṣa*: noun is 'what can be used as a predicate and can receive a

<sup>3</sup> Cf. above, chapter III B, note 26.

<sup>4</sup> Cf. above, chapter II A, note 25. In Greek grammar Dionysios Thrax defines the verb according to its morphological properties as follows: 'The verb is an undeclined word which can receive tense, person, and number, and which expresses an action (*energeia*) or a passion (*patheia*)' (46, 4-5) [G26]. This definition was imitated by other authors, including Apollonios Dyskolos, who adds, however, that morphological properties are not essential for the verb, the most characteristic feature of the verb is that it signifies an action (*pragmata*), the rest of the properties is accidental (*sumparhypomena*). Only thus can we include the infinitive in the verbal system. Cf. Steinthal, 1891<sup>2</sup>, 2, 267 sqq.

<sup>5</sup> Cf. below, chapter VII.

<sup>6</sup> Fār. All. p. 57; the two terms are also used by Ḥwār. Maṣ. 142, 11 sqq. Guzzili tells us that this set of terms for the subject and the predicate was used especially by the theologians, Mubakkir, 21, 28; Quatka, 67/62; cf. Brunschwig, 1970, 143 (21), Gāḡe, 1974, 163-4. On predication as the central part of traditional grammar. Gubaeva, 1971, 26 sqq.; Cohen, 1970.

<sup>7</sup> Sib. Kir. 1, 7, 13-21; cf. Rāḍ. Maṣ. 1, 36, 9.

predicate itself'; verb is 'what can be used as a predicate, but cannot receive a predicate itself'; particle is 'what can neither be used as a predicate, nor receive a predicate itself'.<sup>8</sup> The function of the verb as the predicate of the sentence is already expressed in 'Alī's' definition: 'The verb is what is used to give information'.<sup>9</sup> *Ḥabar* came to be used in Arabic syntax as the *terminus technicus* for the notion of 'predicate'.

Arabic syntax divides sentences into nominal sentences (*ḡamal lmiyya*), and verbal sentences (*ḡamal fi llyya*). The essential parts of a verbal sentence are the 'do-er' (*fā'il*) and the 'action' (*fi'l*).<sup>10</sup> The nominal sentence contains a 'subject' (*muḥadda*); *muḥbar* 'and', and a predicate (*ḥabar*). The term *ḥabar* is also used with the meaning 'proposition': it is then defined as 'that which can be declared truth or falsehood (*allaḡl yaḡḡarraqu ilāhi 'i-taḡliq wa-'i-taḡḡib*)'.<sup>11</sup> This definition is identical to the Stoic definition of *axiōma*.<sup>12</sup> Plutarchos tells us about the proposition: 'In it because the classical authors used to call what was then termed *prōtasis*, and now *axiōma* "the first sentence", because it is the first thing uttered by me (which shows us) telling the truth or lying? This first sentence contains a noun and a verb; the former is called *prōtēs* by the Stoic logicians, the latter *katēgōrēma*'.<sup>13</sup> The predicative part of the proposition, the *katēgōrēma*, is then defined as 'That which is said about something', or 'A composed meaning (*prōgma suntakrōn*) about something singular or

plural', or 'A *ὑπερθετική* meaning (*lekton ellipēs*, i.e., an utterance which does not form a complete sentence) constructed with a nominative in order to form a proposition'.<sup>14</sup> We suppose that the Greek terms *agoreuōmenon* (that which is said) and *suntakrōn* (composed, constructed with) are at the basis of the Arabic terms *muḥbar* and *muḥadd*, respectively. This would explain the resemblance between the definitions of 'proposition', as they are given in the Greek as well as in the Arabic world, and also the existence of several sets of synonyms. One could object that the Greek word *katēgōrēma* denotes a verbal predicate, whereas in Arabic *ḥabar* is precisely the nominal predicate (in the Arabic sense of the word: in *zaid kataba* (Zaid wrote) we would call the second word a verb, but in Arabic grammatical terminology it is called a nominal predicate, or rather, the predicate of a nominal sentence.<sup>15</sup>). This problem may be solved, when we take into account the Greek conception of the verbal predicate, which considers *dion periparē* (Dion walks) equivalent with *dion esti periparōn* (Dion is walking). This construction was borrowed by the Arabic grammarians and, adapted to the structure of the Arabic language, it became a nominal sentence, where the predicate was the predicate of a nominal sentence. For verbal sentences a new set of terms was invented.<sup>16</sup>

The term used for the subject of the nominal sentence is not the Stoic term *prōtēs*, but a new term, *muḥadda*. This 'first position' (*ibtidā'*) does not indicate the first place of the subject in the sentence, but it is the 'first position' of the noun itself, i.e., the nominative: 'The *muḥadda* is the noun in the first position, before the existence of any expressed grammatical *regens*. We use the expression "first position" in order to distinguish between that which has the first place in the real sentence, even though it should come later, and that which has a right to the first position, even though it comes later in the real sentence by a process of extension (*ittisā'*)'.<sup>17</sup> According to

<sup>8</sup> Ap. b. Arb. Ins. 2, 13-8; cf. Kāz. Maf. I, 32 par. - 33, 1; the same kind of definitions for the noun, the verb, and the particle were used by the Coptic grammarians, cf. Bauer, 1972, 68. The Bosnian grammarians used these definitions as an argument for the priority of the noun, cf. below, chapter VII, note 107. On the *ḡamal* Zar. Maf. 13, 2 (predication (*ḡamal*) necessarily consists of two parts, the *muḥadd* and the *muḥbar* (*ḡamal*)).

<sup>9</sup> Ap. b. Arb. Nuzha, 4, 10 (*al-fī mā yuḥabba bihi*).

<sup>10</sup> For these terms an Indian origin has been suggested (*ḥarṭ*, *ḥarṭar*), cf. Dion. 1970, 318, note 1; on the other hand, we find in Greek grammatical literature the *energein* and the *emergein* with approximately the same sense as Arabic *fā'il* and *muḥadd*, cf. Apoll. Dyck. sym. 139, 1; 344, 12-3; 396, 3. *Energie* is already translated by *fā'il* in Quṣṣā Ibn Lūḡa's translation of the *Placita Philosophorum*, ed. Daiber, p. 69, 9. On the term *fā'il* (*muḥadd*) used in another sense in a definition of the noun, cf. above, chapter III B, note 36.

<sup>11</sup> Carr. Moq. 19, 11, in grammar: b. Gln. Ḥas. 1, 186, 12-3; b. Arb. Ins. 54, 10-1; 61, 25; Mub. Muq. 3, 19; cf. van Ess. 1970, 30 and note 40; also b. Fār. Sāh. 150, 7: definition of the *ahl al-maḡar*.

<sup>12</sup> Sext. Emp. adv. math. 1, 70 (= SVF 2, 157); Diog. Laert. 7, 66 (= SVF 2, 186); in logic *axiōma* is translated by *ḡaḡlīyā*, cf. van Ess. 1970, 30 and note 40; Zimmermann, Islamic philosophy, 1972, 536.

<sup>13</sup> Plut. quest. plat. X, p. 1009 C (G 27).

<sup>14</sup> Diog. Laert. 7, 64 (= SVF 2, 183) (G 28).

<sup>15</sup> Cf. Cohen, *ḡaḡl* Zimmermann (Islamic philosophy, 1972, 542, note 37) points out that a Greek sentence *Philon ὑγιαίνει* (Philon is healthy) would be translated into Arabic as *fā'il ḡaḡl*, i.e. a sentence with a nominal predicate.

<sup>16</sup> See cf. above, note 10.

<sup>17</sup> Ruman ap. Mubārak. 1963, 312, 13-6 (A 41). On the difference between *muḥadda* and *fā'il*: b. Gln. Ḥas. 1, 196, 1-14. Muḥarrad's use of the term *ibtidā'* is rather different: he says (Muq. 3, 89) about the *ibtidā'* that it is 'what is called by the grammarians the article (*alif-lām*)'. According to Muḥarrad, in an expression such as *qimā zaid* (Zaid stood up), if we want to predicate something about Zaid, we say *al-qimā zaid* (the stander-up is Zaid) and this process is called *ibtidā'* (?).

Sībawaihi's explanation the *muḥtada* is the first of the nominal states (*aḥwāl*).<sup>15</sup> Greek grammarians, too, held that the nominative is the principal case, and Gregorios of Corioth emphasizes that the subject should occupy the first place in the sentence, theoretically at least: 'Do not think that the noun necessarily occupies the first place in the construction of the sentence, and the verb the second place, and then the rest. On the contrary, the order of the words is left to chance ..., even though it is in the nature of the words that the noun should be put first, being the substance, and that the verb should follow, being the accident, and that the rest of the words should be placed after them ...'.<sup>16</sup> We will not go into the matter of the Syriac equivalents of *muḥtada* and *ḥabar*, *ṣurriyā* and *yebbā*, which are used by Bartholomaeus, since these terms may be the result of Arabic influence, especially by Zamakhshari's *Mufaṣṣṣat*.<sup>17</sup>

It is important to note that there also exists in Arabic literature a set of terms that correspond to the Aristotelian terms for 'subject' (*hypokeimēnon*) and 'predicate' (*katēgoroumenon*), namely *maḥlūḥ* and *maḥmūl*.<sup>18</sup> The existence of two sets of terms, one used in grammar and one in logic – this is stated explicitly by Ḥwārizmī and Gazzālī<sup>19</sup> – confirms the fact that the original grammatical tradition was not influenced by Aristotelian logic, but by the contact with living Greek grammar, which bore the traces of Stoic influence.

It should be mentioned that some grammarians held that a verb sometimes does have a predicate of its own, for instance in expressions such as *ḥaraba huwa fī* (hit is a verb). The arguments for this 'predication about the verb' (*ihḥār 'an al-fī*) are rejected by Rāzī.<sup>20</sup> Another question concerns the position of the temporal and local adverbs (*ḡurūf*), which according to some opponents fall under the definition of the verb, since they cannot have a predicate. Zaḡḡāḡi

<sup>17</sup> Merx, 1889, 147, 246; Tazari, 1969, 115.

<sup>18</sup> Aristot. catog. 1 n-b: the Arabic terms are given, for instance, by Far. Sūb. 17, 12; Ḥwāz. Maf. 342, 11 sqq.; Gerg. Mīḥakk. 23, 28; Qisṣa. 67/62 (cf. Brunschwig, 1970, 163 [21]). Sībīḥīnī ap. Tawh. Muq. 284, 9; cf. also Fleisch, [1961, 25, n. 1. Zimmermann, Islamic philosophy, 1972, 334.

<sup>19</sup> Ḥwāz. Maf. 342, 11 sqq.; Gazzālī explains that *muḥtada*/*ḥabar* is typical for grammar, *maḥlūḥ*/*maḥmūl* for theology, and *maḥmūl* '*unhuḥmaḥmūl*' for logic, or *laḥ* *maḥlūḥ*/*ḥabar* are used for the notions of subject and predicate, cf. the references in the preceding note. As for *ḡurūf*, according to Diem, 1970, 313-5, it is used in Sībawaihi's *Kltah* as a general term for attributes, not for the adjective alone.

<sup>20</sup> Rāzī, Maf. I, 33, 6 sqq.

denies this: the words *makān* (place) and *zamān* (time), implied by the adverbs *ayna* (where?) and *matā* (when?), can receive a predicate. 'Abd al-Qāhir argues in the same way against the objection of the opponents: 'When we say "noun is something about which you can predicate something", what we intend to say is "noun is that about whose meaning you can predicate something" ...'.<sup>21</sup> *Aina* and *matā* fall, therefore, under the definition of the noun, since it is possible to predicate something about their meaning.

After having examined the definition of the verb, we will look into two characteristics of verbs, namely the indication of tense, and (in)transitivity; finally, we will discuss the relationship between the *masdar*/infinitive and the verb.

Grammatical tenses are not the same thing as physical time; still, the two are related. Time (*chrōnos*) is defined by Chrysippos as 'interval (or: extension) of the movement of the cosmos' (*diastēma tēs tou κόσμου κίνησεως*):<sup>22</sup> it is one of the four incorporeal things (*asōmata*).<sup>23</sup> With the 'void' (*kenōn*) it shares the property of being infinite in two directions, the past and the future.<sup>24</sup> The present moment is only an intersection of two infinite times, itself being without dimensions and without existence from a geometrical point of view.<sup>25</sup> But on the other hand, the present time is the only one which really exists (*hyparchein*), whereas past and future only exist as constructions of the mind (*hyphesthēna*).<sup>26</sup>

Aristotle wrote about the precarious existence of the present time, which cannot exist in any physical sense.<sup>27</sup> This implies that actions

<sup>21</sup> 'Abd al-Qāhir ap. Rāzī, Maf. I, 33, par. 34, 2. Note the discrepancy between Zaḡḡāḡi's *donat*, id. 53, 7-12, and his own objections to the definition of the noun by al-Aḥḡal Sa'īd ibn Ma'ada, id. 49, 14 sqq.

<sup>26</sup> SVF 2, 164, 26-7.

<sup>27</sup> Aristot. phys. 233 b 33 sqq.; natural. aetiol. 219 b 220 a; cf. Steinthal, 1890<sup>2</sup>, I, 312 sqq. For Aristotle's theories concerning time: Cona, 1964. After Aristotle became known in the Arabic world the concept of time was dealt with in a more scientific way, by means of the distinction between time *imā* broader and in a narrower

in the present time cannot exist, and that verbs cannot possess verbal forms of the present tense. However, besides time in the strictest sense of the word, there exists another time, which is defined by Fārābī in the following words: 'If we take the time with a definite distance in the past from the present moment, which is the end and the beginning (i.e. the present time conceived of as an intersection of two infinite times, itself without dimensions), and we join it with the same time in the future, and if their distance from the present moment, which is the end and the beginning, forms one single distance in past and future, and if they are taken together, then this time is the present time'.<sup>21</sup> According to Fārābī, philosophers use the word 'now' in both senses, i.e., in the strictest sense and in the derived sense, common people know only of the second sense,<sup>22</sup> whereas grammarians base themselves on the first sense exclusively in concluding that verbs in the present tense do not exist.<sup>23</sup> In Fārābī's definition present time is actually the contraction of the last part of the past and the first part of the future. This is expressed in grammatical terms by Priscianus, when he describes the present tense of a verb: 'We use to call this tense *praesens*, because it holds together and it unites, as it were, in one point the junction of the past and the future tenses, without any intercession .... like when I say in the middle of a verse "I write a verse", when the first part of the verse has already been written down, and the last part is still lacking. I use the verb in the present tense, saying "I write a verse", but it is imperfect, because part of the verse is still lacking'.<sup>24</sup> In fact, this is the original theory of Chrysippus: the present time consists of two parts, one of which is past, and the other future.<sup>25</sup>

This present time may be long or short, for it is possible to say 'the present year', 'the present day', or 'the present minute'.<sup>26</sup> The

sense. An-Sigistūnī (ap. Taub. Muq. 278) and Ibn al-Arabī (loc. 109) use the terms *zaman mayyān* and *zaman haṣṣ* (or *mu'ayyan*); their source was probably Fārābī's *Sarḥ al-'Adra* (Sarḥ, 40, 1-42, 26).

<sup>21</sup> For Sarḥ 41, 2-4 [A43].

<sup>22</sup> Ib. 40, 25-41, 2.

<sup>23</sup> Ib. 40, 17-8.

<sup>24</sup> Prisc. Instit. 8, 52 (414, 24-415, 6): *Ergo praesens tempus hoc videtur dicere quod continet et coniungit quous puncto aliquo tuncquon praeteritis temporis et futuris nulla distinctione interveniente... ut, si in medio versu dicam "scribo versum" prope cuius parte scripta, cui adhuc deest extrema pars, praesentis uxor verbo dicendum "scribo versum", sed imperfectum est, quod deest adhuc versui, quod scribam.*

<sup>25</sup> This theory is transmitted by Ploar, de comm. not. cap. 41 sqq.; cf. SVF 2, 517.

<sup>26</sup> For Sarḥ, 41, 2-9; cf. scholia D.T. 559, 4-8: 'They say that Dionysius used

present time is a gradual transition from the future into the past.<sup>27</sup> In this time the action takes place simultaneously with the expression of that action in speech: 'The present time comes into being during the words of the speaker', says Zāḡḡāfī,<sup>28</sup> thereby agreeing with the scholiast on Dionysios Thrax, who puts it like this: 'It (i.e. the present time) combines the existence of something with its expression'.<sup>29</sup>

Sibawaihi's analysis of the Arabic verbal system revealed two verbal forms: a perfect (*qatala*), and an imperfect (*yafʿulu*) (and an imperative (*yafʿul*)). He described these forms in the following way: 'As for the verbs, they are patterns taken from the expression of the events of the nouns, and they are constructed to (signify) what is past, and what is to come, and what is being without interruption. The structure of what is past is *dahaba*, *samʿa*, *makaṣa*, *ḥunida*; the structure of what did not yet occur is, ... when you are telling something *yafʿulu*, *yafʿahu*, *yafʿribu*, *yafʿatu*, *yafʿrabu*, and so is the structure of what is being and is not yet finished, when you are telling something'.<sup>30</sup> Remarkable in this division is the fact that, although there are only two verbal forms, and although these forms do not indicate the time of the action, but its aspect, Sibawaihi nevertheless designed a system with three tenses. Merx attributed this to the influence of the Persian translations of Aristotle's *De Interpretatione*<sup>31</sup> in combination with the fact that Sibawaihi was of Persian

"times" in the sense of "distances of time", like when we divide the time into years, months, days, and hours. That is why he calls it "present tense" (consequenter, namely, as if it has the length of a year, or a month, or a day, or an hour, for we say "the present year, month, day, hour") [C30]: cf. Chaitrob. 2, 12, 2 sqq. (the *pluribus diebus* of the grammarians); also Joh. Phil. comment. in Aristot. phys. 703, 16. On the grammatical present tense: scholia D.T. 248, 13 sqq.; 249, 3-8; 403, 3; 404, 26-8; 559, 4 sqq.; cf. also Ploar's scholia on Archidamios, de comm. not. cap. 41 = SVF 3, 263, 14.

<sup>27</sup> Cf. Prisc. Instit. 8, 51-3 (414, 9-415, 10): '... as time flows continuously like a river, it can hardly have a (fixed) point in the present time'. (... cum enim tempus fluit non instabit volutus cursum, vix punctum habere potest in praesentis). Cf. Zāḡḡ. Id. 87, 3-6 'but by bit' (= *per partes* errantem).

<sup>28</sup> Zāḡḡ. Id. 87, 3 (*al-maṣṭawīn al-ḥalīq al-musakallim*); Sibawaihi defines the three grammatical tenses with similar terms (Sarḥ al-Kitaḥ, 1, 12, as quoted by Mubārak in his edition of Zāḡḡāfī's *Tahkīk*, p. 87, n. 1).

<sup>29</sup> Scholia D.T. 404, 27-8 (*alima paṣ al-ḡayṭhi ḡayṭhi kal sh' eḥar*); cf. Chaitrob. 2, 11, 34-12, 1.

<sup>30</sup> Sib. Kit. 1, 2, 2-5 [A43]. Merx's analysis of this text, 1889, 142, can hardly be correct. Sibawaihi most certainly did not mention the imperative as an example of what is being done and is not yet finished. Sibawaihi's 'definition' of the verb, cf. above, chapter III A, note 25; also, Tropaia, 1962b.

<sup>31</sup> Aristot. de interpret. 113 b 17, as compared with the translation given by Paulus Ferra, ed. Land, IV, 15, 112, in the preserved Syriac translation of the Persian original

origin.<sup>42</sup> On the other hand, awareness of three physical times is not unique, and Sibawaihi may very well have adapted on his own initiative the Arabic verbal system to these three times. What is more, he does not give to each of the three times its own name, but uses, following the structure of the Arabic language, only one name for the present and the future tenses together. The perfect 'tense' is called by him *maḍī*, i.e., 'what has gone, what is past'. In this case, there may be a connection with the Greek *paratēthōta*, but not in the case of the imperfect 'tense', which is called *muḍāri'*, i.e., 'resembling' (so the nouns, or the active participle *fā'il*), since the verbal forms of the imperfect have almost the same endings as the nouns, or since the syntactic function of the imperfect resembles that of the participle.<sup>43</sup>

The term *muḍāri'* is used by Sibawaihi not only to indicate the resemblance of the verbal modes to the nominal cases—which is evident in Arabic—but also fundamental equivalence in function of the imperfect verb and the active participle: *zaid la-yafuḥu* (Zaid really does) and *zaid la-fā'il* (Zaid is really doing) have the same construction, and amount to the same thing. Another analogy between the imperfect verb and the active participle is that verbs may receive the particle *saufa*, just as participles may be determined by the article: in both cases, according to the Arabic grammarians, the function of the added article is to make the word to which it is added definite.<sup>44</sup> This 'famous resemblance' (*muḍāra'a maḥūra*)<sup>45</sup> was held for a long time by all grammarians, although the Bagrians and the Kūfans interpreted it differently: according to Ibn al-Anbārī,<sup>46</sup> the Kūfans held that the imperfect verbs had a certain right to declension, because they, like the nouns, are used to convey different meanings (*ma'dna muḥtalifa*);<sup>47</sup> the Bagrians, on the other hand, granted the right of

declension to the imperfect verbs in accordance with their place within the grammatical system, where they resemble the nouns in three respects (*wuḡūb*).<sup>48</sup> These three respects are: the analogy between the article and the particle *saufa*; the fact that both the imperfect verb and the active participle may receive the particle *la*; and the fact that imperfect verbs may replace the active participles in many sentences. Essentially, these are the same points as those mentioned by Sibawaihi.<sup>49</sup> Thus, according to the Bagrians, imperfect verbs are declined because they themselves resemble the nouns; according to the Kūfans, a certain category of the verbs, namely the imperfect verbs, is declined, because verbs bear a general likeness to nouns.

The comparison of the verbal moods to the nominal cases is not as original as it appears to be at first sight. The same comparison is made in Greek grammatical literature, though not because of a resemblance of verbs to nouns, but 'nach dem belichteten Parallelismus zwischen den verschiedenen Gebieten der Grammatik'.<sup>50</sup> Zaggāgi's remark that verbal forms may be used for more than one meaning, just like the nouns, may be compared to the remarks of Apollonios Dyskolos concerning the *sumptōhela*, i.e., the phenomenon that one form takes the function of another form.<sup>51</sup> As for the equivalence in function of the imperfect verb and the active participle, we may point to the Greek doctrine, which states that a form such as *laúet* (he washes) is equivalent to *estí laúōn* (he is washing), as is customary in logic. According to the Kūfans the active participle constitutes the third tense of the verb, the present tense; the participle is then called the *fīl dām*.<sup>52</sup>

It does not seem very likely that the Arabic term *muḍāri'* was the result of the influence of the Syriac term *ramā ḡe-damya*, as is asserted by Tarazi;<sup>53</sup> it seems more probable that the influence was the other way round, since the Syriac term is of a much later date.

(probably this Paulus Persa is identical with Paulus of Nēbis, who died in 571 A.D., cf. Baumstark, 1968<sup>2</sup>, 121; Georr. 1948, 15—quoted by Merx, 1989, 142.)

<sup>42</sup> Merx, 1989, 142.

<sup>43</sup> For *muḍāri'*: Maḥrūrī, 1958, 238; Diem, 1970, p. 319, note. Apparently, Zaggāgi avoided the term *muḍāri'*: whenever it crops up in the argument of an adversary (e.g. Id. 107, 9 sqq.; Id. 87, 13 sqq.; cf. *fi šurūḥih*) he starts to explain its meaning.

<sup>44</sup> Sib. Kit. I, 3, 12 sqq.; cf. Hegazi, 1971, 55-8.

<sup>45</sup> Zaggāgi, Id. 87, 14.

<sup>46</sup> b. Anb. fas. 224, 21 - 225, 25 (mas'ala 73).

<sup>47</sup> Probably not in the sense that homonymous verbs exist, as Zaggāgi tries to make out, Id. 87, 13 sqq., but that verbs indicate different meanings—possess different syntactic functions—just as nouns are subject to changes which serve to express the different functions of the nouns (*muḍāri'*), e.g. Id. 69, 6 sqq. But cf. Zam. Maf. 109, 2.

<sup>48</sup> For this term: Weil, 1913, 22 sqq.

<sup>49</sup> Abū b. Anb. fas. 56, 4 sqq.; Ast. 12, 21 sqq.

<sup>50</sup> Socrinal, 1891<sup>2</sup>, 2, 296; scholia D.T. 246, 27-8; 399, 22-4; Apoll. Dysk. fragm. pp. 36-7; Theod. 52, 4 sqq.; Chokrob. 2, 104, 26 sqq.; Macrobius, diff. 611, 36 Kell; Prim. inst. 8, 63 (421).

<sup>51</sup> Apoll. Dysk. adv. 202, 2-15. The possibility of one word with two different meanings was denied by some Arabic grammarians, cf. Say. Muzh. I, 237-8; b. Qim. Jam. 2, 308, 9-11.

<sup>52</sup> Cf. Maḥrūrī, 1958, 238-41; also the refutation by Šarāfi in his commentary on the *Kaṣb*, I, 493, as quoted by Maḥrūrī in his edition of Zaggāgi's *fatāwā*, p. 86, note 1.

<sup>53</sup> Tarazi, 1969, 116.

We have stated above that we do not believe that there is any cogent reason to assume an influence of Aristotelian logic in order to explain the occurrence of three tenses in Sibawaihi's analysis of the Arabic verbal system. Such an influence could, however, be supposed in the case of later grammarians who distinguished between three tenses of the verb, each with its own name: *māḍī*, *ḥāl*, and *muṣtaqbal*. But because of the fact that this system was used in Arabic grammar before the first translations from Greek into Arabic, we prefer to assume a direct influence of Greek grammar, which should explain the transition from Sibawaihi's terminology (*māḍī-muḍāʾir*) to the new terminology with three names for three tenses (*māḍī-ḥāl-muṣtaqbal*).<sup>54</sup> Probably, the Syrian grammarians had something to do with this: in Syriac grammar the names for the three tenses of the verb are evidently calques of the Greek names, *zawā da-bar* (= *paralēluthōs*), *zawā da-qa'em* (= *enhestōs*), *zawā da-ʾuq* (= *metēlōn*).<sup>55</sup> In Hebrew grammar the term *zeman 'ōmēd*—also a calque of the Greek *enhestōs*—is used to translate the Arabic *ḥāl*.<sup>56</sup> Ibn Qanāḥ tells us that verbs have two tenses, namely *ḥāḍir* (= *paralēluthōs*) and *ʾāqīq* (= *metēlōn*).<sup>57</sup> We may have one instance in Arabic logical literature of the term *kalima qāʾima* being used to indicate the verb in the present tense, namely in Ibn Sīnā's *Sharḥ al-ʾIḥṣāʾ*: 'The situation of the inflected (*muṣawwafa*) and the present (*qāʾima*) verb in the language of the Greeks is that the present verb is that which indicates the present time (*ḥāḍir*), whereas the inflected verb is that which indicates one of the two (other) times'.<sup>58</sup> Note that the Greek term *enhestōs* came in use only a long time after Aristotle, namely in Stoic grammar. This supports the thesis of contact between Arabic grammar and living Greek grammar, where *enhestōs* was used after the example of the Stoics.

Grammarians may object to the reality of the present tense with arguments couched in physical terms,<sup>59</sup> but when it comes to the question of the hierarchy of the three grammatical tenses, these objections disappear: speech is ruled by reason, and therefore, order and regularity should be found in every category, if only you look for

it; moreover, speech is an image of reality, and there are, therefore, three tenses, just as there are three times. Their hierarchy is determined by the hierarchy of the physical times. Zaggāgi, for instance, deduces from the chronological order of non-existence, existence, and past existence the classification of the verbal tenses: future - present - past.<sup>60</sup> He probably follows the doctrine of his teacher, Zaggāgi, who held the same theory, and had a famous controversy with Abū Bakr ibn as-Sarrāg on this subject.<sup>61</sup> Ibn as-Sarrāg thought that the present tense was the first verbal tense; his arguments are mentioned by Sūfī, who does not mention Ibn as-Sarrāg by name, but evidently thinks of him, when he deals with the controversy on this subject.<sup>62</sup> Zaggāgi's point of view is also mentioned by Suyūṭī, and apparently it was the point of view of the majority of the grammarians. Ibn Qanāḥ, the Hebrew grammarian, tells us in his *Kitāb al-ḥumāʾ* that 'the Arabic grammarians' consider the future tense the first verbal tense, since every action must first be future, before it can be present, and then past.<sup>63</sup>

The same problem is dealt with in Greek grammar. In the scholia we often find the theory expressed that the present tense is the most important of the verbal tenses, since it is the stem of the verb (*thēma rhēmatos*), a morphological argument that is, of course, absent in Arabic grammar. The scholiasts also say that every past tense once was a present tense; this resembles the argument mentioned by Zaggāgi in the *ʾIḍāḥ*.<sup>64</sup> Sophronios summarizes the arguments in support of the possible theories concerning this point:<sup>65</sup> a) present - past—future (not identical with Ibn as-Sarrāg's theory, because he places the future immediately after the past); b) the past is the first of the verbal

<sup>54</sup> Zagg. 1d, p. 85.

<sup>55</sup> b. Gm. Hqs. 2, 31, 1-2.

<sup>56</sup> Sūfī, Sarb. 1, 2, quoted by Muḥṣin in his edition of Zaggāgi's *ʾIḍāḥ*, p. 85, n. 1, unfortunately only in part, without the arguments used by Sūfī.

<sup>57</sup> Bacher, 1970<sup>1</sup>, 139 and notes 3-5; cf. also b. Arb. Hqs. 105, 13, Suy. Aṣṣah. 1, 50.

<sup>58</sup> Scholia D T 249, 9-12; 401, 33 sqq.; 559, 10-3; also Apoll. Dysk. synt. 16, 1-2.

<sup>59</sup> Sophr. 413, 32 - 414, 7: 'First comes the present, second the past, and third the future tense; but others say that the future tense should be put first, since first something is going to happen, then it happens, and then it is past; others prefer the past tense as the first tense, since past things happened before present things ..., but according to another theory, the present tense comes first, because it is visible and evident ...' [G 1]. Sophronios' arguments for the present tense resemble Ibn as-Sarrāg's words: 'The imperfect (*muḍāʾir*) has the first position in the mind prior to the past' (*al-muḍāʾir muḍāʾirun li-l-ʾaḥd min al-māḍī*), ap. b. Gm. Hqs. 3, 105, 10, cf. ib. 3, 331, 13, obviously because the present time is 'before our eyes'; here *muḍāʾir* denotes the present time, cf. the quotation from Sūfī (above, note 62) who uses *ḥāl*.

<sup>54</sup> Cf. Gezenius/Kautzsch, 1909<sup>28</sup>, 132 n. *Muṣawwaf* (expected) is another name for what is normally called *muṣtaqbal*. Both terms could translate the Greek term *metēlōn* (Zagg. 1d, RS. 3; R7. 4, 108, 18 - in combination with *muṣawwaf*, perfect tense).

<sup>59</sup> E.g. Zagg. 1d, p. 86.

tenses (this theory existed in Arabic grammar, according to Naǧǧār<sup>60</sup>): c) future—present—past. The third theory mentioned by Sēphronios is the theory which was held by the majority of the Arabic grammarians, who defended it with the same arguments as the Greek grammarians: first something is going to happen, then it happens, and then it is past.

In later Greek grammar the process by which verbs are connected with their objects received the name *metabasis* or *diabasis* (in Latin grammar *transitio*). This term denoted the extension of the action of the verb to an object. This concept of 'transition' fits in with the point of view we find in later Greek grammar about the role of the verbs: verbs are no longer regarded as logical predicates in the sentence, but rather as names of actions: the verb ceases to be the *kategorōmenon*.<sup>61</sup> It is now the *ónoma tou prágmatos*. *Metabasis*, *diabasis* are found for instance in the writings of Apollonios Dyskolos,<sup>62</sup> as well as in the scholia on Dionysios Thrax,<sup>63</sup> and in Byzantine grammar.<sup>64</sup> In Syriac grammar there existed a term *mlanyānā* for the transitive verb with approximately the same meaning as the Greek term *metabasis*.<sup>65</sup> In Hebrew grammar we find the term *niš'abbēr*, which also corresponds to the Greek term.<sup>66</sup> Both terms, though, may be calques of the Arabic term. Arabic grammar used the term *mud'addī* and its negative *qār mud'addī* (as well as the corresponding substantive *ta'dīd* or *ta'dīya*) for the concept of transitivity and intransitivity.<sup>67</sup> The importance of these terms may be deduced from the fact that Sibawaihi devotes to this subject no less than ten chapters at the beginning of his *Kitāb*.<sup>68</sup> Considering the resemblance between the Greek and the

Arabic terms—the Arabic root 'd-w means 'to cross, overstep'—we suppose that the Arabic terms are calques of the Greek *metabasis*, *metabatikās*, borrowed by the Arabs at an early date through contact with living Greek grammar. The basic conception implied by the use of this term is common to both grammars, namely that the action of the verb passes on, is extended to the object.<sup>69</sup>

One of the hotly debated issues in the discussions between the Basrians and the Kūfians was the relation between the verb and the masdar: the Basrians held that the masdar was the origin of the verb, whereas the Kūfians believed that the verb was the original form, from which the masdar is derived. Ibn al-Anbārī deals with the arguments of both parties in the 28th problem of his *Ḥaṣṣ*,<sup>70</sup> and the problem is mentioned by other authors as well.<sup>71</sup> Traces of the discussion are even found in Hebrew grammatical writings.<sup>72</sup> The discussion concerning the arguments pro and contra was garnished, as usual, with extra-linguistic evidence.<sup>73</sup>

The origin of this question lies in Greek grammar: although the Greek infinitive is of a completely different morphological and syntactic nature than the Arabic masdar, the connection between them becomes obvious when we compare the names given to the Greek infinitive and the Arabic masdar. The current name for the masdar, *ism al-fīl* (verbal noun) corresponds to the Greek *ónoma tou rhēmatos*.<sup>74</sup> When Zaǧǧāǧī tells us that the masdar is to be regarded as the name for the actions of the things represented by the nouns,<sup>75</sup> he is actually translating the Greek *ónoma tou prágmatos*.<sup>76</sup> There are also traces of Greek doctrines in the arguments which are adduced for or against the priority of the masdar.

The first argument for the priority of the masdar is the one implied by Sibawaihi's description of the verb, in the interpretation of later

<sup>60</sup> Naǧǧār in his edition of Ibn Ġharī's *Ḥaṣṣ* 2, 31, n. 1, unfortunately omits references.

<sup>61</sup> For this term: cf. above, note 21.

<sup>62</sup> Apoll. Dysk. synt. 402 sqq., pp. 45-7; active and passive verbs: synt. 394 sqq. Cf. also Schneider's index s.v. *diabasis/metabasis*.

<sup>63</sup> Scholia D.T. 89, 3 *rhēma anasthēnōn vs. rhēma en anasthēnōn*.

<sup>64</sup> E.g. a text ascribed to Gregorios of Corinth, ed. Döring, 215, 1, 3 etc.

<sup>65</sup> Tamiš. 1969, 116; Mers. 1889, 253.

<sup>66</sup> Bachor. 1979, 195, footnote.

<sup>67</sup> Ibn Hišām (Awd. 2, 260) uses *qār* (failing) for *qār mud'addī*, for which we also find *ǧāmil*, e.g. b. Ġin. Haṣ. 2, 215, 20; 2, 349, 2. *ǧāmil* is an interesting term; it always indicates something simple as against something more complicated: it may designate substantives vs. adjectives (Suy. lqt. 72, 8; Rāzī, Maf. 1, 44, 6), a simple noun vs. a derivative (de Saey, 1829, 329; 356), a not-inflected word vs. an inflected one (b. Anb. lqt. 57, 22; b. Ġin. Haṣ. 1, 37, 10 (*ǧāmla*); Ta'lab ap. Zaǧǧ. Maǧ. 350, 8). Because of its concrete meaning ('thick', 'frozen', 'solid') we would assume it to be a calque of a foreign word, but we have not been able to find a Greek equivalent.

<sup>68</sup> Sib. Kit. 1, 13-26.

<sup>69</sup> Kūfian grammar used another term to denote the transitive verb, namely *niš'ab* (falling) (cf. Weil, 1913, 72, note 1).

<sup>70</sup> b. Anb. lqt. 102, 6 - 107, 26; cf. Asr. 69, 22 - 71, 19.

<sup>73</sup> Cf. below, chapter VII, for logical arguments used in the discussion concerning the priority of the masdar.

<sup>74</sup> E.g. scholia D.T. 480, 25; Apoll. Dysk. synt. 87 sqq.

<sup>75</sup> Zaǧǧ. 3d. 56, 3-8.

<sup>76</sup> E.g. scholia D.T. 72, 24; 399, 34; 558, 22; Cholrob. 2, 7, 12.

authors: 'As for the verbs, they are patterns taken from the expression of the events of the nouns'.<sup>83</sup> The actions of the nouns, according to this interpretation, are the masdars, and the verbal forms are taken from the masdars. 'Taken from' (*ma'ḥūḍ*) receives the meaning of 'etymologically derived from', and this is the usual interpretation given to it by Western scholars as well. As regards the idea of an etymological relation between verbs and infinitives, we may refer to an observation made by Apollonios Dyskolos: 'From the infinitive itself stem conjugated forms, and within the infinitive they are absorbed again'.<sup>84</sup> This Greek grammatical theory, which makes the infinitive the root of all verbal forms, is borrowed by Farābī in his description of the Greek *kathartes onomatikotai kai rhematikotai*:<sup>85</sup> '(The rules distinguish) between those forms which are *maḥḍir*—those are the forms from which the verbs are derived—, and those forms which are not *maḥḍir*; (they also show) how the *maḥḍir* are changed into verbs'.

The Bagrians deduce from Sibawaihi's words that the masdar occupies a higher position in the hierarchical system of the Arabic language, and they assert that the infinitive is primary with regard to the verb. Another way of saying this is to state that the masdar is the genus (*ḡunṣ*) of the verbal forms. In Arabic terminology this means that an action, be it a single or a repeated one, can always be described by the masdar. We find the same statement in Greek grammar.<sup>86</sup> Additional arguments mentioned by the Bagrians are:

1. the masdar is the noun of the verb (*ism al-fi'l*): nouns are prior to verbs; therefore, the masdar is prior to the verb.<sup>87</sup>

<sup>83</sup> Sib. Kit. I, 2, 2-3, cf. above, chapter III A.

<sup>84</sup> Apoll. Dysk. frag. p. 90 = Choiseb. 2, 209, 13-4 [G32]: Greek grammar does not, however, grant the infinitive the first place in the hierarchy of the verbal forms, cf. the sentence preceding this quotation: 'You must know that the infinitive occupies the second place, and rightly, even though it should have occupied the first place, being the principle and, as it were, the root of the verbs, for from the infinitive... Apollonios' opinion was not very consistent, cf. below.

<sup>85</sup> Far. lib. 14, 3-7 [A45]: on this passage, cf. above, chapter III B. The use of the word *maḥḍir* in this Greek context suggests a Greek origin for this word (?).

<sup>86</sup> b. Qm. Hag. I, 25, 5-6; 2, 206, 8 sqq.; cf. 1, 27, 2 sqq. with Apoll. Dysk. synt. 325, 1 sqq. (quoted below, cf. note 101).

<sup>87</sup> b. Anb. lib. 103, 12-6 (masdars are nouns; therefore, they can stand on their own, and do not need a verb; this means that they are more than the verbs: a verb cannot stand on its own, but needs a noun); cf. scholia D T 558, 21-8. Contrast with this the reasoning of Choiseboulos, 2, 210, 6-12: an infinitive and a verb can form a sentence together (e.g. *Amroḡmōi philosophōn*, I prefer to meditate); this shows that infinitives cannot be verbs, but must be adverbs. An objection against Ibn al-Anbārī's argument, cf. below, chapter VII, note 30.

2. the name *maḥḍir* shows that the masdar is the origin (*maḥḍar*) of the verb.<sup>88</sup>
3. not in every masdar does a verb belong; this proves that the masdar is prior to the verb (this morphological argument was used by Zaḡḡāḡ, Zaḡḡāḡ's teacher).<sup>89</sup>
4. the form of the masdars vary; therefore, they are prior (a morphological argument attributed to Ibn as-Sarrāḡ).<sup>90</sup>
5. the meaning of the masdar is always found in the verb, while the opposite is not true (an argument adduced by the *aḥl an-naḥar*, i.e., the logico-grammarians).<sup>91</sup>

Two other arguments are mentioned by Ibn al-Anbārī:

6. the masdar signifies an absolute time (*zaman muṣṭaq*), the verb a special time (*zaman mu'ayyan*).<sup>92</sup>
7. the masdar signifies a pure action, the verb an action together with the time of that action.<sup>93</sup>

Just as in Greek grammar another theory is put forward, namely that the infinitive is nothing more than a derivative form of the verb, actually a sort of adverb.<sup>94</sup> Kūfan grammarians held that the verb is the principle (*asḥ*) from which the rest of the verbal forms are derived, including the *muṣṭaq*. The Kūfani propose the following arguments for their point of view:

1. the masdar is only a reinforcement of the meaning of the verb (*taḥkīd*), e.g., in the expression *daraba zaid ḡarḥan* (Zaid hit really hard) (this argument was used by Abū Bakr ibn al-Anbārī).<sup>95</sup>

<sup>88</sup> Suy. Iqt. 86-1; Zaḡḡ. Id. 58, 14-8.

<sup>89</sup> Zaḡḡ. Id. 58, 19-39, 5; cf. Suy. Muḥ. 2, 112-1. Examples: *ḡawwama* (sonhood), *ḡawwama* (brotherhood).

<sup>90</sup> Zaḡḡ. Id. 59, 6-12.

<sup>91</sup> Zaḡḡ. Id. 59, 13-60, 2; the same argument in the discussion concerning the priority of the noun, cf. below, chapter VII, note 99.

<sup>92</sup> b. Anb. lib. 103, 5-12.

<sup>93</sup> b. Anb. lib. 103, 16-19. These last two arguments are only variants of Zaḡḡāḡ's fifth argument (also mentioned by Ibn al-Anbārī, lib. 103, 22 sqq.), namely that the masdar expresses less meaning than the verb, in other words, that the masdar has less accidents than the verb. Were the masdar derived from the verb it would have an added meaning, such as, for instance, the participles have. This idea is explained by means of a comparison with a metal and the objects made from it, cf. below, chapter VII, note 25.

<sup>94</sup> Apoll. Dysk. frag. p. 87 sqq.

<sup>95</sup> Zaḡḡ. Id. 60 ab. - 61, 6.

2. the name *masdar* shows that the verb is the principle, and that the *masdar* is derived from the verb, contrary to what is asserted by the Bayrians.<sup>98</sup>
3. the *masdars* are formed according to the same phonetic rules as the verbs, i.e., if the verb has a strong radical, the *masdar* has likewise a strong radical, and if the verb has a weak radical, so does the *masdar*.<sup>99</sup>

Three more arguments are mentioned by Ibn al-Anbārī:

4. syntactically verbs may prevail over the *masdars*, i.e., they may have a *masdar* as their object; therefore, they are prior to them.<sup>100</sup>
5. a *masdar* presupposes the action of an agent, which is expressed by the verb; therefore, the verb is prior to the *masdar*.<sup>101</sup>
6. not to every verb does a *masdar* belong; this proves that the verb is prior to the *masdar* (contrast this with the Bayrian argument of the Bayrians!).<sup>102</sup>

Some Greek grammarians did not consider the infinitive a *full* verb, because of the fact that it is devoid of the characteristics of a normal verb, such as person, number, verbal mood, while it has some

<sup>98</sup> Zaḡḡ, l. 61 u.k. - 63, 10. This argument is a common trick in this sort of discussion, namely that you remove the meaning of a term in order to obtain from it an argument in favour of your own theory. We can compare the procedure in the discussion about the *masdar* with the discussion about the *ḥawāṣṣ* in the third problem of Ibn al-Anbārī's *Ṣiḥḥ*, where the Kulāns play the same trick with the term *ḥawāṣṣ* (cf. *Arab. Ling.* 13, 15-17). We find it also in theological debates: both parties in the discussion about free will used the term 'Qadariite' for their adversary, cf. Aḥmad, *Ḥikma*, 47, 7 sqq.; Wüst, 1971, 28-9; van Ess, 1965, 128-30.

<sup>99</sup> Zaḡḡ, l. 60, 3-9. On the other hand, there is the Basrian argument that *masdars* sometimes have other correspondents than the verbs. When al-Aṣma'ī says: 'Often the *masdar* is derived from another form than the verb' (*maḥṣūṣūn 'al-ḥawāṣṣ al-masdar min ḡayr laḡḡ al-ḥ'*) (Zaḡḡ, *Maḡ*, 140, 1-2) he is in fact undermining his own Kulān theory, because it is precisely the uniformity of verb and *masdar* which is used as an argument for the priority of the verb. A practical example of this question is found in Rummānī's commentary on Sibawayhi's *Kitāb* (cp. Mubārak, 1963, 311): 'The pattern *ḥawāṣṣ* from the word *ḥawāṣṣ* (dark red or green colour) is *ḥawāṣṣ* ... and the *masdar* from it is *ḥawāṣṣ*'. Some grammarians say that it is better to say *ḥawāṣṣ*, because the 'y' is the result of the change of the added *aw* in *ḥawāṣṣ*, just as it is changed in *ḥawāṣṣ*. But Sibawayhi does not mention this. The difference between the two forms is that in the *masdar* we have the original form, without any change, because the verb is derived from the *masdar*' (A 46).

<sup>100</sup> b. *Arab. Ling.* 102, 12-5.

<sup>101</sup> b. *Arab. Ling.* 102, 21-3.

<sup>102</sup> b. *Arab. Ling.* 102, 18-21 (namely in the case of such expressions as *af'ala*, *af'ala*, and *af'ala*, which are verbs according to the Basrian theory, cf. problems 14 and 15, *lsg.* pp. 47-68).

of the characteristics of the noun.<sup>103</sup> This is the reason why the infinitive is called *aparémphatos*, i.e., a form which only signifies the pure meaning, none of the accidents. The argument proposed against this opinion is that the infinitive is the real verb, which signifies only and exclusively the action in itself with no accidents attached to it.<sup>104</sup> In the words of Apollonios Dyskolos: 'As we have said before, the mood of the infinitive is the most general mood, which of necessity lacks those things we have discussed before, namely person and the accident number. These are not connected originally with the verb, but only serve as an attribute of the persons who partake in the action. For the action in itself is one, e.g. writing, walking; after it has been connected with persons, forms like 'I walk, we walk' are derived from it'.<sup>105</sup>

Some people are not convinced by this conception of the infinitive as the general mood, and they continue to regard the infinitive as something derived from the verb, as a sort of adverb.<sup>106</sup> These people wish to exclude the infinitive from the verbal system because of the fact that it does not have any of the characteristics of the verb, 'just as the participle ..., which is devoid of all those characteristics, is excluded from the verbal system'.<sup>107</sup> In that case, the infinitive cannot remain the 'root' (*raḥa*) of the verbal forms; still, most grammarians believe it to be just that. Even more difficulties arise when we continue to regard the infinitive as a verb, while at the same time we call it the noun of the action (*ónoma tōu prágmatos*), or when we call the infinitives the 'nominal categories of the actions' (*ónomatikal katégoriai tōn pragmatōn*)—Apollonios Dyskolos manages to make these two statements in one and the same passage.<sup>108</sup>

<sup>103</sup> E.g. Choirob. 2, 6, 8 sqq.; Sople 2, 411, 11.

<sup>104</sup> In other words, infinitives denote *prágma* without *sunē*, scholia D.T. 400, 9-11.

<sup>105</sup> Apoll. Dysk. 324, 10 - 325, 3 [G33]; cf. Choirob. 2, 7, 12-5.

<sup>106</sup> Their arguments are mentioned by Apoll. Dysk. synt. 320-2 and by Choirob. 2, 210, 13 sqq. The arguments against their theory, Apoll. Dysk. synt. 323-4.

<sup>107</sup> Apoll. Dysk. synt. 320, 6 - 321, 2 [G34]. Translation of the entire passage: 'An attribute *per excellence* of the verb is mental condition, but this is incompatible with the infinitive, together with the categories of number and person, which cannot be expressed by the infinitive, just as the participle ... which is devoid of all these characteristics, is excluded from the verbal system'. In Arabic grammar the participle is excluded from the verbal system, because it has something more than the verb, namely the added meaning of a noun.

<sup>108</sup> Apoll. Dysk. adv. 129, 28-1; cf. also scholia D.T. 400, 5-9. *Raḥa* is used by Sople 2, 411, 2-7; in the same sense: *arab* (ib.), and *alā* (ib. 410, 36).

If we accept the infinitive as part of the verbal system, the problem of its position within that system remains: some Greek grammarians gave the infinitive the first place, because it is the root of the verbal forms: 'Some people wanted to put the infinitive in the first place, reasoning that it is, as it were, the raw material and the origin of the verb. This is the reason why it has not added to its signification "subjectivity" (i.e., the verbal moods), or the persons, or the numbers: for original elements are always simple, just as the four elements as against the bodies (which consist of them), and the twenty-four elements (sc. the letters of the alphabet) as against the words, and shapeless clay as against the household goods made from it'.<sup>107</sup> As a counterargument, the fact is mentioned that the indicative mood is the 'stem' of the verb, from which the other forms are derived.<sup>108</sup> Moreover, the acting person comes before his actions, and the verbal form which expresses the combination of the acting person with his action must needs be prior to the pure action, expressed by the infinitive.<sup>109</sup> Apollonios Dyskolos himself changed his mind on this point: having first placed the infinitive after the indicative, he later put it at the beginning of the verbal system.

In conclusion we can say that in all these discussions the fact is emphasized that the infinitive signifies the pure action without further accidents.<sup>110</sup> This justifies our considering it the 'general verb' (*genikón rhēma*).<sup>111</sup> Herein lies the resemblance between the Greek and the Arabic data: the contradiction between on the one hand the verbal nature of the infinitive, and on the other hand its nominal characteristics. In both grammars this resulted in the same appellations, and in a *communis opinio* to the effect that the infinitive and the *maṣdar* are the *rhiza* and the *axl* of the verbal forms; in both grammars, too, the opposition against this point of view was not strong enough to make people abandon it. Close parallels in morphological arguments were not to be expected because of the great difference in nature between the Greek infinitive and the Arabic *maṣdar*. But the fact that both

groups of grammarians used the same appellations, and arrived at the same conclusions is sufficient proof that in this point, too, Arabic grammar underwent the influence of Greek grammar. In other words, Greek grammar provided the raw materials, the rest of the building was set up independently by the Arabic linguists, as in so many other cases.

<sup>107</sup> Sophr. 2, 410, 36 - 411, 11 [G35]. For the comparison, cf. above, note 93.

<sup>108</sup> Sophr. 2, 410, 34.

<sup>109</sup> Scholia D.T. 400, 5-9, cf. above, note 99. At this point the discussion in the *Ḥaṣṣ* takes another turn (Id. 36 ult. - 57, 3). Zaḥḥājī tries to show from the priority of the acting person in other circumstances the priority of the nouns over the verbs.

<sup>110</sup> In Greek, of course, the *infinitivus* retains the accident 'tense'.

<sup>111</sup> Apoll. Dysk. synt. 325, 12 - 326, 2, scholia D.T. 546 (explanation of the notion *genikón rhēma*). With regard to the *genikón rhēma*, cf. Ibn Ḥazm's concept of *al-ṭarṭīb al-ṭabīʿī* 'expression verbale commune aux choses', Arsakez, 1956, 139-40.

## CHAPTER FOUR

THE *UṢŪL AN-NAḤW* AND GREEK EMPIRICIST MEDICINE

'Apart from the doctors, there is nothing more ridiculous than a grammarian'.<sup>1</sup>

The system of Arabic grammar is held together by a rigid complex of methodological rules or norms, the so-called 'principles of grammar' (*uṣūl an-naḥw*). Similar principles are also followed in other branches of science, such as theology, jurisprudence, tradition, and exegesis of the Qur'ān, and they are generally believed by Arabic scholars to belong to one and the same system. Their use in these sciences illustrates how the development of Islamic culture depended on the regulating system of working principles, and how different sciences influenced each other through the principles and the interpretation of the various elements of the system. In the law the system of principles was used from the beginning of the 'Abbasid caliphate: al-Sāfi'ī (d. 820/205) was the first to bring the different elements together into a consistent whole, after various scholars before him had already used them in their own conception of the law.<sup>2</sup> In Arabic grammar this system already existed at the time of Sibawaihi and al-Jalāl.<sup>3</sup> In this chapter we shall try to prove the thesis that these principles are connected with those that were used in Greek empiricist medicine. In antiquity they already served as a model for a new way of comparing facts of speech in the so-called *Kanones hellēnistoi*.<sup>4</sup> We shall first give an outline of the epistemological theory implied by this trend in medical practice. After that, we will try to show how Greek grammar borrowed its criteria from this system, and how, under its influence, a system of judging the facts of language was developed that runs parallel to the Arabic *uṣūl an-naḥw*.

<sup>1</sup> Athenaios, *Deipnosophistae*, XV, p. 666 a [G.36].

<sup>3</sup> Reuschel, 1959, 16, n. 2: 'Qiyās-Analogie lässt sich schon bei Sibawaihi und Jalāl in einer erweiterten Bedeutung nachweisen.' For the use of *qiyās* in early Arabic grammar: Muḥrāk, 1974<sup>2</sup>, 51-71; Delif, 1968, 46 sqq. (al-Jalāl); 80 sqq. (Sibawaihi).

<sup>4</sup> Cf. above, chapter III B.

Fundamental to the study of empiricist medicine is Deichgräber's *Die griechische Empirikerschule*,<sup>5</sup> a collection of fragments with an excellent introduction about the theoretical background of the empiricist theories, in which the author explains how and why empiricist physicians differed from—and emphatically wished to differ from—current rational and dogmatic theorizing. This difference manifested itself most clearly in the specific opinion about the value of an analogical judgment: we find here the same reluctance to accept a rational principle as an explanation of physical events as we find in early Islamic theology—though, of course, for other reasons. The empiricist school—which cannot be called a 'school' in the strictest sense of the word, but which was only a way of practising science—was 'founded' about 250 B.C. by the Greek physician Philinos of Kos, who dissociated himself from the dogmatic schools of his time. Many other physicians, most of them working in Alexandria, the centre of the empiricist school, began to practise according to his principles; the best known among them were Herakleides of Tarente (1st half of 3rd century B.C.) and Theodas of Laodikeia (about 100 B.C.). The most famous of them all was Sextus Empiricus (about 150 A.D.) who dedicated his life to a complete refutation of everything dogmatic, whether with respect to medicine, philosophy, or grammar. After him the 'school' disappeared, only to leave traces in many quotations by writers such as Celsus and Galenos.

The basic thesis of all these physicians was that knowledge can only be derived from perception by the senses, to which all other criteria of knowledge are reduced. Their dialectic methods are mostly based on common Skeptic arguments, such as the equivalence of all theories, the incompatibility of scholarly disagreement with the claim of scientific rationality, the *reductio ad absurdum*, the *regressus ad infinitum*, and the uselessness of all theories.<sup>6</sup> The most important working

<sup>5</sup> Pauly-Wissowa, RE V, 2, 2516-2523 s.v. Empirische Schule (Wellmann); Deichgräber, 1930; also, Edelstein, 1933.

<sup>6</sup> For the rich history these arguments had in Islam: van Ess, 1970, 45-6; cf. the example mentioned in chapter VI, note 47; also the discussion about the question how it is possible that scientists disagree about scientific questions (a well known Skeptic argument, Stough, 1969, 102; cf. Tush. Muq. p. 233. *Ḥikm* 1d, 46-7. A common Skeptic argument against the art of grammar is that it is superfluous, because either its rules are in accordance with current speech—in which case we do not need grammar—or its rules are contrary to current speech—in which case it is the wrong sort of grammar. cf. Sext. Emp. adv. math. 1, 184 sqq.; 200 (Varro, De L.L. R, 27: 33); Celsus praecor. c. 27 sqq. ap. Deichgräber, 1930, 93, 9-14; Farābī, *Ḥikm*, p. 30; cf. Mahdī, 1970, 76. On empiricism and skepticism: Stough, 1969, 11-4; 107-23.

principle was observation, which a scholar can do himself (*autopsia*, *empetria*). But they define 'science' (*téchne*) as 'a collection of observations',<sup>7</sup> and as nobody is able to collect in his experience the whole gamma of physical events, a scholar is also dependent on the results of former experiments and observations (*historia*).<sup>8</sup> It is required that the informant through whom these results reach him should receive his own knowledge from physical observation, that he is free from prejudice, and reliable and expert. The safest conclusions can be drawn from historical material, if the tradition is unanimous (*sumphônia*).<sup>9</sup> If all these principles together fail in explaining the phenomena, there is a last resort: the observation that the same circumstances often result in the same healing process; this observation may be used as a working principle. The greater the similarity of the circumstances, the greater the probability of success, and this principle of 'basing one's conclusions on similarity' (*metabasis tou homoiou*) is therefore a principle of a probabilistic nature, which cannot give certain guarantees. We must also emphasize that a conclusion on the basis of this principle does not proceed from a compelling and certain, intrinsic cause by virtue of which events are similar. In this respect empirical analogy differs from dogmatic analogy: an empiricist physician is not interested in the question whether 'something causes something else to happen, because that something else is similar to it'; for him it is enough to know that 'similar events (generally) happen in this or that way'. The *metabasis tou homoiou* is 'a way to find a solution',<sup>10</sup> 'an instrument to find resources';<sup>11</sup> in modern terms, it is a heuristic strategy which serves to fill the gap in our incomplete empirical knowledge. Finally, empiricist medicine used a principle known as the *diastolé*, which consisted in 'separating the particular from the general'.<sup>12</sup>

Thus, Latin speech consists of nature, analogy, custom, authority. The nature of nouns and verbs is invariable and passes only on to us

what it received, nothing more and nothing less ... Analogy is an arrangement of speech as it is handed down by nature; it distinguishes uncouth from cultivated speech in the same way as silver is distinguished from lead... Custom is on a par with analogy, not by virtue of its technique, but by its force; it is only accepted because it is supported by the agreement of many people ... Authority ... does not contain reason, nor nature, nor custom: it is only accepted on account of the opinion of orators'.<sup>13</sup> In this way Charisius describes the nature of speech by means of the four criteria *natura*, *analogia*, *consuetudo*, *auctoritas*. These four criteria of correct speech may also be found in a somewhat different arrangement in Quintilianus' writings.<sup>14</sup> Barwick<sup>15</sup> and Fehling<sup>16</sup> have extensively investigated the various accounts of this doctrine and established their mutual dependency, as well as the fact that the doctrine of the criteria has a Greek origin. They are related with the Greek *kanônes orthographias*: *etymologia*, *analogia*, *diálektas*, *historia*.<sup>17</sup> Nowadays, it is generally accepted that the model for this system may be found in the methods which empiricist physicians used to derive knowledge about physical facts from observation by sense perception.<sup>18</sup> Grammar was not the only science to be influenced by empiricist theory: the science of law also borrowed many elements from the empiricist system of criteria.<sup>19</sup>

<sup>7</sup> *Quint. inst. 1.1.1* (Charisius): *Latini verba natura analogia consuetudine auctoritate. Natura verborum naturam habentem immutabilem est nec quicquam aut plus aut minus transiit nihil quam quod accepit. Analogia verborum a maiora prout ordinata est neque aliter barbarum loquatur ab erudita quam argutus a pluri-dispositis. Consuetudo non nisi analogiae sed rationis per est, idem solum recepta, quod multorum consensum contrahit. Auctoritas non quicquam aut rationis aut naturae aut consuetudinis habet; tantum opinionum approbata recepta est. Char. art. gram. 62. 14-63. 7, probably quoting from Varro.*

<sup>8</sup> *Serius consensu ratione rhetorice doctitudine consuetudine. Rationem praestat principum analogia, auctoritatem et etymologia.* 'Speech consists of rationality, tradition, authority, custom. Rationality is mostly represented by analogy, sometimes by etymology' (Quint. inst. 1.1.6. 1-4 sqq.). On Quintilianus' criteria of correct speech: von Fritz, 1949.

<sup>10</sup> Ib. 95, 30 (*hóthos epí tou árthrotóu*). On the Skeptic background of this doctrine: Stough, 1969, 133-7.

<sup>11</sup> Deichgräber, 1930, 95, 23 (*órganon hóthotómou árthrotóu*).

<sup>12</sup> Ib. 134, 8-11 (*apó tou kónou eis lógon apókrínetai*).

Not surprisingly the empiricist idea of science as a collection of the most frequent physical facts, as an *empeiria*, is found in grammatical literature: Dionysius Thrax defined grammar as 'practical knowledge of the words that occur most frequently in poets and writers of prose'.<sup>20</sup> Our conclusion is that grammarians, influenced by empiricist doctrine, used to solve linguistic problems and to establish correct speech as against barbarisms and solecisms by means of the four criteria of correct knowledge, i.e. in the case of grammar: the nature of speech; the analogical comparison of linguistic forms; the normal, daily usage; and the authority of writers in the past. The relative importance of each of these criteria may differ when compared with the criteria of medicine, but this is only to be expected, in view of the essential difference between the two disciplines.

The Arabic system of the *uṣūl*, as we shall describe below, shows a striking similarity to the Greek criteria. We could, of course, attribute this similarity, in so far as it concerns the linguistic *uṣūl*, to a direct contact of Arabic grammarians with living Greek grammar, but in that case the existence of the system in other sciences remains unexplained, unless we are to place grammar at the basis of the rest of the Islamic sciences. It seems much more plausible to seek the origin of the system as it existed in the Arabic world, in the translations of Greek medical works, especially those of Galenos (d. 199 A.D.), who was a prolific writer in this field, and who also wrote about the methodology of his profession, i.e. about the various theories concerning the methods a scholar should use to attain knowledge about medical and physical matters. We know that those of Galenos' works that specifically discuss empiricist medicine were translated, or at least known in the Arabic world, from Hunain's list in his *Dikr mā naḥṣi-*

*ma min kutub Ḡālīs*,<sup>21</sup> particularly Galenos' work *Kitāb fī 'l-taḡribat al-tibbiyya* (Book on medical experience), which has been edited by Walzer.<sup>22</sup> It is a well-known fact that medical writings were among the first to be translated, and that the tradition of the medical philosophers from Alexandria, the centre of the empiricist 'school', continued to exist during the 'Abbāsid caliphate.<sup>23</sup> The early translators were generally practising physicians as well as philosophers who heeded Galenos' injunction that a good physician should also be a philosopher.<sup>24</sup> Many of these medical books were already known long before the times of Hunain, not only in Syriac translations, but also in Arabic.<sup>25</sup> The first known translator, Yaḥyā ibn al-Biṭrīq, a Byzantine Roman who lived in the reign of the caliph al-Manṣūr (754/137-775/159), translated Ptolemaios' *Tetrabiblos* and other medical treatises.<sup>26</sup> That in this process empiricist works and methods were very popular is proved among other things by Ma'ūdī's remark that in the reign of al-Wāṣiq (842/227-847/232) there were still empiricists practising at the caliphal court.<sup>27</sup> It was through these translations and maybe through contact with the first translators that Arabic

<sup>20</sup> Hubsch, *Dikr*, 46, 3-13: 'As for the books in which he follows the methods of the empiricists, I have found three treatises about them ... His book on medical experience. This book consists of one treatise, in which he sets forth one by one the arguments of the followers of experience and of the followers of analogy (i.e. the dogmatists). I translated it not long ago into Syriac for Buhārī'. In these works also belongs his book on the foundations of the study of medicine. This book consists likewise of one treatise. In this book he gives a paraphrase of the book of Methodios: it is a good, useful, and spiritual book. I have translated it into Syriac for Ḡabrīl. Hubair translated it into Arabic for Abū al-Ḥusayn. To these works also belongs his book on the fundamentals of experience. This book also consists of one treatise. I have a manuscript of it among my books, I did not translate it' [A 48]. On these books: Steinschneider, 1960<sup>2</sup>, 351, no. 83; 345, no. 81, 351, no. 85. For Hunain's medical background and activities: Meyerhof, 1926, Brockelmann, *GAL.*, I, 224, S. 1, 360.

<sup>21</sup> The Arabic translation of the first of Galenos' books mentioned by Hunain (*On medical experience, Peri tēs theōretikēs empeiriās*) has been edited by Walzer, 1944; cf. Steinschneider, 1960<sup>2</sup>, 351, no. 85. On Galenos: Temkin, 1973; Kieffer, 1964, esp. 1-18 (this is the *Einleitung* translated by Hubsch, cf. Steinschneider, 1960<sup>2</sup>, 348, no. 70; Hubsch, *Dikr*, 51, 10-3).

<sup>22</sup> Meyerhof, 1930.

<sup>23</sup> Galenos' book *Histōia de doctōis intrōs kai philsophos* in the Arabic translation of Ṭāh ibn Yaḥyā has been edited by P. Bachmann, Göttingen, 1965 (also translated by Hunain, Steinschneider, 1960<sup>2</sup>, 345, no. 59; Hubsch, *Dikr*, 44, 15-9). On Galenos' philosophical writings or Arabic translation: Steinschneider, 1960<sup>2</sup>, 346-8; Badawi, 1968, 112-3; Walzer, 1963<sup>2</sup>, 142 + note 1. *Azhar*, 1959, 86-91.

<sup>25</sup> Brockelmann, *GAL.*, I, 221-2: S. L. 364; Steinschneider, 1960<sup>2</sup>, 58, 200, 313, 316-7, cf. p. 257 s.v.; Dunlop, 1939; Badawi, 1968, 190.

<sup>26</sup> Ma'ūdī, *Murūj*, 7, 173; cf. van Ess, 1970, 35, n. 73; 24, n. 14.

<sup>27</sup> *Dikr*, *Thr.*, 5, 2-3 [C 37]; cf. Sext. *Eriep. adv. math.*, I, 57; 76. The *epi de poli* argument is already used by Aristotle, e.g. top., 112b 1-20, and cf. van den Bergh, 1954, 2, book 1.6. 2.1. Dionysios Thrax considered grammar an *empeiria* notwithstanding the modern custom to refer to his book as the *Tékhnē* of Dionysios Thrax—, cf. Barwick, 1922, 217, n. 2. For the discussions concerning the nature of grammar: ib. 221 seq. Arabic grammarians preferred to follow the Stoic custom and called grammar a *technique* (*ṭaḥqīq*), e.g. Hunain, *Maṣ.*, 42, 13; b. Ḥajd, *Muq.*, 546, 23; b. Maḥṣī, *Radd*, 88, 12; 93, 11; cf. Rothmann's definition of grammar: 'The art (*ṭaḥqīq*) of grammar is based on distinguishing correct from incorrect speech, in accordance with the opinions of the Arabs, by a sound analogy' [A 47]. (Maḥṣī, 1963, 247; ib. 277, 9 *awl al-ṭaḥqīq* = the grammarians). Ibn Qīnāl distinguishes between *ṭaḥqīq*, i.e. the phonetic aspect of language, and *ḥuḳūq*, i.e. the morphological-lexical aspect of language (*Ḥas.*, I, 356, 2 et al.; *ṭaḥqīq* vs. *maḥṣūṣ*, ib. 2, 156, 13).

science in its early stages became acquainted with the highly developed methodology used by the empirical physicians, as presented to them by Galenus' writings. This system served as a scientific foundation not only for those scholars who practised medicine, but also for those who studied law or discussed theological problems, and even for those who tried to describe the Arabic language, like al-Ḥaṣīl and Sibawaihi. They used the same type of primitive analogy so characteristic of empiricist medicine, and checked it against the very same elements of experience (e.g. the Qur'ān and older poetry) and observation (e.g. the actual state of the language) that were commonly used in Greek medicine. It is clear that Sibawaihi could never have derived such knowledge from the *Corpus Aristotelicum*—which had not yet been translated at the time—but only from a direct contact with those who understood Greek culture, in this case probably the early translators. The connection is shown not so much by the fact that these elements existed in both Greek and Arabic culture (although it is an important argument in itself), but rather by the fact that these elements were handled in the same way.

We have solid proof of the existence of the empirical criteria in Arabic medicine in the writings of the Christian physician Yūḥannā ibn Māsawaih (d. 857/243), teacher of Hunain ibn Ishāq and first vice-chancellor of the *Bait al-ḥikma* in Baghdad.<sup>28</sup> He says in his *Nawādir al-jibhiyya*: 'Everything that is agreed upon by the physicians, which is attested to by analogy, and confirmed by experiments, let that be your basis (sc. of knowledge in medical matters)'.<sup>29</sup> Here we find the medical criteria (*igmā'* (= *sumphōnē*), *qiyās* (= *menhōnōr toū homoiōu*), and *tafriḥa* (the experiment which is indispensable for the *autopsia*). Not only did Yūḥannā ibn Māsawaih write about these matters, but we have also a report about a discussion that took place at the court of the caliph between Ibn Māsawaih and his teacher, Qihirī ibn Buḥtīsā' (d. ± 830/215);<sup>30</sup> according to some people, Hunain ibn Ishāq was also present. The caliph asked them: 'I would like to know the essence of obtaining medical knowledge, and the basis of its principles: is it by the senses (*ḥiss*), or by analogy (*qiyās*), or by tradition (*naḥw*); are these things (sc. this knowledge) obtained by rational principles, or is knowledge of these things and the method

(of arriving at this knowledge) obtained according to you by hearsay...'.<sup>31</sup> According to some of those present, physicians derive their knowledge from four principles: natural (*ṭabīʿī*), accidental (*ʿaradī*), rational (*ʿaqlī*), and analogical (*naqlī*)<sup>32</sup> principles. This is the method of those (Greek) physicians who base themselves on the *empeiria* (*tafriḥa*). This text is a very important one, since it provides us with evidence about the use of terms from the field of the *uṣūl* in discussions about medicine at an early date (1st half of the 9th/3rd century). Especially interesting is the term *naḥw*, which is better known as a term used in the sciences of law and tradition.<sup>33</sup>

This originally medical system was, of course, used in different ways in each discipline by which it was taken over. The criteria of grammar, law, and theology, for instance, are not identical, and they do not have the same power. Comparisons between the various sets of principles were already made by Arabic authors, for instance by Ibn Ġinnī in his *Maqāṭiʿ* under the heading 'On the norms of the Arabic language, whether they are theological or juridical ones'.<sup>34</sup> Ibn Ġinnī's conclusion is that grammatical norms are more related to theological norms, in so far as both are based on common sense, on reason, whereas juridical norms derive their power from revelation, which can only be accepted and believed, though not proved. On the other hand, grammatical norms are inferior to theological norms, because theology uses only norms which are based on necessary and stringent arguments, whereas grammar uses also another category of norms, namely those which are based on probable, i.e. facultative arguments.<sup>35</sup> This is also stated by Zāḡalī at the beginning of his chapter about the grammatical norms.<sup>36</sup>

As for grammatical arguments, they are described by Ibn al-Anbārī in his *Luma' al-adilla* in the following way. Ibn al-Anbārī distinguishes between three different kinds of arguments (*uṣūl*, *adilla*):

<sup>28</sup> Mas' Murūḡ. 2, 170-80 [A 50].

<sup>29</sup> *Naql* might be terminologically related to *menhōnōr toū homoiōu*.

<sup>30</sup> For the history of this term: Ansari, 1972, 259-82; *naḥw* is also, though infrequently, used in grammar, e.g. Sib. Kit. 1, 74, 7, cf. Carter, 1973, 147; also Suy. Muzh. 1, 194, 4 (in *ḥam al-ʿarab*).

<sup>31</sup> In Ġinnī *Uṣūl*. 1, 48-96: the length of this chapter of the *Maqāṭiʿ* shows the importance of the criteria for correct speech and the wish to be absolutely clear about their nature. Louzel gives a paraphrase and a partial translation of this chapter, 1963, 271-5 (40-5).

<sup>32</sup> In Ġinnī *ib.* 1, 88, 1-3.

<sup>33</sup> Zāḡalī *ib.* 64, 2-3.

<sup>28</sup> On Yūḥannā ibn Māsawaih: Brockelmann, GAL I, 266; S I, 416; Meyerhof, 1926, 717; Meyerhof, 1930, 402.

<sup>29</sup> Yuh. b. Mas. Nawādir, 33, 9-10 (= Eisl. 132) [A 99].

<sup>30</sup> For the Buḥtīsā' family: Peters, 1968, 44, 99.

transmission (*naql*), analogy (*qiyās*), and the argument called (*istiḥḥāb al-ḥādī*); the argument of *ijmāʿ* is related to the tradition.

*Naql* is the tradition concerning grammatical forms as handed down through earlier literature. Just as we saw above in the case of the *historia* in Greek medical writings, not every tradition is acceptable: the informant must meet certain requirements. Van den Bergh already recognized the similarity between the requirements in use in traditionalist circles, and those of the Greek empiricists.<sup>37</sup> It seems that grammatical practice was strongly influenced by the practice of the traditionalists: in fact, the terminology that describes a tradition's usefulness and reliability is largely borrowed from that discipline.<sup>38</sup>

Unanimity (*ijmāʿ*) is one of the most frequently used criteria; it is considered obligatory for the correctness of a linguistic expression, and as such it is related to theological unanimity.<sup>39</sup> It is used in all sorts of discussions not only in a general way,<sup>40</sup> but also in the more restricted sense of 'unanimity of a certain group', just as theologians tended to restrict the notion of *ijmāʿ* to one single group of theologians, or at least to professional theologians, not to just anybody who cared to advance something about theology.<sup>41</sup> In grammatical discussions we find for instance the unanimity of the grammarians,<sup>42</sup> or the unanimity of the Kūfians and the Basrians.<sup>43</sup> Schacht and van den Bergh discovered some connections between the *ijmāʿ* in Arabic theology and law, and certain procedures in Greek logic.<sup>44</sup>

The second, and far more controversial, norm is analogy (*qiyās*), which is defined by Ibn al-Anbārī as 'The interpretation of the meaning of the secondary in terms of (or: analogously with) the primary',<sup>45</sup> and also as: 'the comparison of the secondary with the

primary by virtue of something that causes the secondary to be analogous to the primary'.<sup>46</sup>

The admissibility of the *qiyās* has been an issue throughout the history of Islamic culture. One could even say that there is a remarkable correlation between a scholar's attitude towards analogy and his attitude towards Greek logic and science.

In order to understand why a criterion based on analogy could cause such tremendous differences of opinion, it is important to consider the history of Islamic science, and especially of theology. Early Islamic theology was confronted with a situation in which the conquered peoples were the possessors of a much superior science and culture, and also of a much greater experience in discussion and application of knowledge. On the other hand, the newly converted Arabs, Persians, and other nations, were urging their religious leaders to provide them with practical rules of life, and with arguments to defend themselves against the sarcasm of other religious communities. The theological experts were, therefore, forced to expand the limited number of Qur'ānic regulations, and, as their religious conscience did not permit them to invent such regulations on their own authority, they had to look for other authoritative sources of knowledge. Since not even the practice of the Prophet, as it was handed down by later generations, sufficed, nor the consensus of the (learned) community, they were compelled to use yet another method: reasoning by analogy. But here they were hampered by the fact that in these early times Islam could not at the same time hold the omnipotence of Allāh and the existence of *causae secundae*, which are inherent in and essential to the type of analogy used by Aristotle, and by Greek logic in general. Thus, another type of analogy arose, that of the *qiyās* in its early form: reasoning from one concrete instance to another, where the causes are only pseudo-causes,<sup>47</sup> and where everything but a strict occasionalism is severely condemned. Every statement can only be proved by a preceding, similar, statement, until at last the ultimate proof is derived from Allāh, Who in His wisdom lets everything happen according to a customary pattern—although He could do otherwise, if He wanted to. Syllogistic reasoning was only taken over after the influx of translations of Greek philosophical writings. The introduction of these 'pernicious' foreign doctrines is often ascribed

<sup>37</sup> Van den Bergh, 1934, 2, 16.

<sup>41</sup> Goldziher, 1884, 32 sqq.; Schacht, 1930, 82-97.

<sup>42</sup> E.g. Zoḡḡ. Id. 41, 2 (*ijmāʿ an-naḥwīyyin*); 62, 15 (*ijmāʿ an-naḥwīyyin*).

<sup>43</sup> E.g. Zoḡḡ. Id. 61, 14-5 (*ijmāʿ al-kūfīyyin wa-basrīyyin*) 119, 12-3; b. Anb. Lum. 44, 9; 47, 2 (both lines with the addition 'unanimity is a deciding argument' [*wa-l-ijmāʿ huwa qāḍiʿ*]); cf. also b. Anb. Itq. 203, 12 (Basra); b. Qim. Uas. 2, 326, 14-7, and ib. 3, 139 sqq. (chapter on the use of the *ijmāʿ* as an argument).

<sup>44</sup> Van den Bergh deals with the probabilistic value of this argument, which is already used by Aristotle, 1934, 2, 198, note 349.3. On *ijmāʿ* in theology and its connections with the Stoic consensus: ib. 205, note 362.3. On connections as a trace of Greek logic in early Muslim legal science: Schacht, 1930, 83.

<sup>45</sup> b. Anb. Lum. 42, 5-6 [A 51].

<sup>46</sup> Ib. 42, 6-7 [A 52].

<sup>47</sup> In orthodox theology the word *ṣabab* was used for these pseudo-causes, as against the *ḥad* of the philosophers.

to the philosophers and the Mu'tazila, while it was said to have been introduced into orthodox theology by al-Guwainī 𐤀𐤍𐤁𐤏𐤃 Imām al-Ḥaramainī (d. 1085/478), the teacher of al-Gazzālī.<sup>47</sup>

There are two fundamentally different kinds of analogy: the *qiyās al-ṣibh* and the *qiyās al-'illa*. The *qiyās al-ṣibh*—which does not fall under Ibn al-Anbārī's second definition—is based on a resemblance between the secondary and the primary. We might also say that this sort of analogy is an empirical principle consisting in the comparison between two things because they are alike in one or more respects. This is the original form of analogy as it was accepted by Muslim science at an early time—an analogy which has nothing to do with classical Aristotelian syllogism. It is, therefore, not contradictory to the omnipotence of Allāh: it is nothing more than the establishment of a resemblance between two things which enables us to draw a conclusion about the secondary, based on the condition of the primary. We may draw this conclusion, since we suppose that Allāh created laws of nature, or rather that it pleases Him to let the same combinations of atoms happen regularly. There is nothing within the things themselves which could make them cause something else without the help of something outside them. Thus, nature and its phenomena bear witness to the omnipotence of Allāh, Who is the *causa efficiens* of everything. This philosophy is altogether different from the determinism we find in Greek philosophy; it is related more closely to the atomism of a Demokritos,<sup>48</sup> in so far as there can be no causal basis for knowledge of natural phenomena, connections between phenomena bear an occasional character. What we have here described is the common view of Aṣ'arism, and thus of orthodoxy. Some theologians, though, did not even accept an analogy based on mere resemblance: for Ibn Ḥazm even the establishing of a resemblance between two things is an unwarranted conclusion, not permitted by Allāh.<sup>49</sup>

The second sort of analogy is the later form, which came into use after the beginning of the activities of the Mu'tazila, who did accept

the independency of the accidental actions of the substances created by Allāh, and who could, therefore, also accept the notion of causality in nature. According to them causal analogy does exist, and it consists in the observation that two things have an inner 'cause' ('*illa*, *ma'nā*)<sup>51</sup> in common that causes the secondary to be similar to the primary. This sort of *qiyās* has always been criticized by orthodox theologians.<sup>52</sup>

The origin of the *qiyās* is still a point of debate. Schacht and others have pointed to parallels in the Hellenistic world, especially to the resemblance between the *qiyās* and certain procedures in Roman juridical theory.<sup>53</sup> We should not forget that the rhetorical schools all over the Roman—and later the Byzantine—empire taught the same juridical materials. This could explain the parallels between the first theoretical principles used in Arabic manuals of law, and those used by Roman lawyers in the rhetorical schools. There is another terminological parallel which might be mentioned in this context, namely between the *qiyās* and a principle used in Hebrew biblical exegesis. This principle, which is called *hiqqūṣ* (literally: to hit one thing against another),<sup>54</sup> is used for an extrapolation of the teachings of the Torah: it consists in the juxtaposition of two biblical regulations that share a common feature, and in drawing a conclusion from this.<sup>55</sup> The procedure of *hiqqūṣ* reminds one indeed of the use of the *qiyās* in Ṣāfi'ī's time, and a terminological connection between the two procedures is certainly not too far-fetched.

There remains the question of chronology. Supposing that at Sībawīhi's time there existed a more or less consistent system of criteria and analogical rules, we are left with the choice between the rhetorical schools with their juridical theories on the one hand, and the translations of medical works on the other hand, as possible sources for the Arabic system of *uṣūl*. It is true that the Arabs became acquainted

<sup>47</sup> On '*illa* and *ma'nā*', cf. chapter X, n. 61; Nader, 1956, 86-7.

<sup>48</sup> For the attitude of Muslim theologians towards analogy: Brunschwig, 1970; 1971. We may refer to the empirical distinction between a *qiyās analogicus* (conclusion pointing to invisible beings = *qiyās al-'illa*), which is to be rejected, and a *qiyās epilogicus* (conclusion pointing to visible beings = *qiyās al-ṣibh*), which is acceptable; both terms are used in the Arabic translation of Galenos' *On medical experience*, Walzer, 1944 58 sq. They go back to Ainesidemos' theory of causal explanation; Slough, 1969, 97-9.

<sup>49</sup> Schacht, 1950, 99-100, who quotes two articles by D. Daube in *Law Quarterly Review*, 52, 265-6 and in *Tulane Law Review*, 18, 365-6; cf. chapter I, note 8.

<sup>50</sup> Margalioth compares the Hebrew term with the Greek verb *ῥησθαι*, *Journal of the Royal Asiatic Society*, 1910, 320, quoted by Schacht, 1955, 99.

<sup>51</sup> For the *hiqqūṣ*, Zeitlin, 1964.

<sup>48</sup> Brockelmann, *GA*, I, 486-8; S L 671-3.

<sup>49</sup> This account is simplified in so far as we leave out the role that is attributed to the human agents in this process of causality, in particular the function of the *ḥaṣṣ* (that is the appropriation by man of his own acts which he is able to perform thanks to the fact that Allāh created in him the accident of being an agent) in Aṣ'arism; on this problem: Frank, 1966. In nature, causality is denied by Aṣ'arī; for the resulting atomistic philosophy: Adaswāl, 1974, 99-102.

<sup>50</sup> Cf. Arnaldez, 1956, 165-93.

early on with the educational tradition of the rhetorical schools, but we also know that medical writings were among the first to be translated, and that the first contacts with Greek science—especially in Alexandria—took place precisely in this field. What is more, we have the testimony of Yūḥannā ibn Māsawaih, quoted above, which proves that at least the physicians were aware of the existence of a system of criteria to judge the physical facts. On the other hand, the study of grammar and grammatical norms was transmitted in the first place by the rhetorical schools. In any case, both grammar and the sciences received their methodological principles from the empiricist system, and the same holds true for the study of law, so that even the transmission of THE criteria through the rhetorical schools found its basis in medicine. The Arabic system may have been even the result of an interaction between the various disciplines, which all shared the need to collect, to analyse, and to interpret an enormous number of facts. These facts could be ordered according to some well defined principles, and these principles were borrowed from the classical tradition, possibly with the help of Hebrew biblical exegesis, in which these principles—or at least one of them—were already used before the beginning of Muslim science. But at the basis of this system was the method of the empiricist school, which became known in the Orient through the translations of medical works, and possibly through direct contact, for instance in Alexandria.

It goes without saying that, in the course of time, grammatical science took whatever elements it could use from other disciplines (such as, for instance, the methods used by the traditionists for distinguishing between reliable and unreliable information). The sciences of tradition, exegesis, and law were so important in the daily life of the first centuries of Muslim culture, that they could easily exercise a considerable influence upon other sciences.<sup>56</sup> We have seen already that a grammatical informant must meet the same requirements as someone who transmits a tradition about the life of the Prophet. Another example is that agreement between different sources is granted the same value and power in grammar as in law and theology.<sup>57</sup>

Perhaps the influence of other sciences applies also to the last of the three principles mentioned by Ibn al-Anbārī, the *istithbāb al-ḥāl*, according to which one may draw a conclusion about the properties

of something secondary from the properties of something primary. This is a particular kind of analogical reasoning, which, according to Schacht,<sup>58</sup> is to be regarded as one of the traces of Greco-Roman law. On the other hand, one could suppose a connection with the empirical principle *diagnostic*, although the data are not very clear in this case.

In the law the use of the *istithbāb al-ḥāl* is better known than in grammar, although Ibn al-Anbārī dedicates a chapter of his book about the sorts of proof permitted in grammar to it.<sup>59</sup> In the law the term is used for the legal assumption, in case of doubt or in the absence of solid proof, that the last known situation still obtains. According to Goldziher the use of this argument in legal discussions has its origin in the work of al-Sāḥī (d. 820/205) or in the Sāḥīite school.<sup>60</sup> One good example is that given by Goldziher of a man who is missing, but whose death cannot be established with certainty. According to the *istithbāb al-ḥāl* this man must be assumed to be alive, and consequently his relatives may not inherit his possessions; the missing man himself may inherit from someone else, and in that case, the inheritance will be kept by the state. In the Ḥanafite school of law, the former decision is accepted, but not so the latter, since in this school *istithbāb al-ḥāl* is only applied to the denial of a right, but not to the recognition of a right (*li-d-daf' lā li-l-iqbār*).<sup>61</sup> It goes without saying that for the Zāhirite lawyers, such as Ibn Ḥazm, the *istithbāb al-ḥāl* is a favourite method. For Ibn Ḥazm it ranks as high as, and is part of, the consensus (*ijmā'*) of the community: if the community agrees about something, we dare not accept a change in that situation until we have solid proof (*dalil*) for the necessity of such a change. Such a proof can, of course, be only a text from the Qur'ān or a tradition from the prophet.<sup>62</sup>

In grammar this sort of argument is connected with the discussions about analogy (*qiyās*) and exceptions (*ṣaḡḡf*).<sup>63</sup> Each word and

<sup>57</sup> b. Arb. Lams. 86, 5 sqq.

<sup>58</sup> Goldziher, 1887; cf. Schacht, 1950, 126.

<sup>59</sup> Goldziher, 1887, pp. 235-6. Is there a connection with Roman legal practice? According to Zitzky, 1960, under Roman law a missing person was considered alive until definite proof was given concerning his death: his capacity to accept an inheritance in absence was the subject of many legal discussions (ib. 120-4).

<sup>60</sup> b. Ḥazm, l.h. 3, 385-90; 5, 590 sqq.

<sup>61</sup> Cf. e.g. Ibn al-Sarrāj, ap. Suy. Muḥ. 1, 139, 5-13 and Suy. lqL, 24-5. Zaḡḡ. lq. 72 pos. - 73, 3: the connection between this argument and the juridical theory of

<sup>56</sup> Koyf, 1956; cf. above, chapter I, note 61 (Cassirer's theory); Mubārak, 1974<sup>2</sup>, 79-93.

<sup>57</sup> Cf. above, notes 39, 41; discussion by Weiss, 1966, 62-8.

each category has its own rules, and we may only assume a change of these rules (e.g. an exception, in the case of a category of words), when we are able to point at a cause ('illa) which is responsible for that change. In all other cases we must adhere to the primary rule (afl).<sup>64</sup> The same may be stated positively: when we use the argument of an *istihāb al-hāl* we do not need any further proof, since the *istihāb al-hāl* suffices as a proof.<sup>65</sup> A remainder of the discussion between the Hanafites and the Šāfi'ites about the use of the *istihāb* in the case of the recognition of a right may be found in Ibn al-Anbārī's remarks about the argument *a silentio* (al-istidlāl bi-'adam ad-dalīl) following on the discussion about the *istihāb al-hāl*: such an argument is rather weak, and can never be decisive in the case of an affirmation, at most in the case of a denial.<sup>66</sup>

By way of hypothesis we would like to point to the remarkable similarity of this argument to one of the norms of knowledge which was used in empiricist medicine: the *diastole* or *diastoleis*, defined in the Latin translation of Galenos' *Subfiguratio Empirica* in the following way: 'Something is a *diastole* (*diastole*) if it distinguishes the particular from the general only by way of evident knowledge'<sup>67</sup> and '... the determination (*determinatio* = *distinctio*) of something, which they describe by saying that it is the property which distinguishes within a general category something which is particular in some respect'.<sup>68</sup> In view of the fact that according to our theory all criteria of knowledge used by empiricist physicians are at the origin of the Arabic *usūl*, we do not suppose that the similarity in this case is coincidental.

In Zaggāgī's system of grammatical norms the *qiyās*<sup>69</sup> ('*illat qiyāsiyya*) provides the explanation of the linguistic facts which we have

exception (*istisnā'*): cf. Arnaldez, 1956, 136 for the Zāhirite theory concerning this doctrine (every judgment from the Qur'ān or the tradition should be taken literally and generally, except in the case of textual evidence to the contrary). Apparently, Zaggāgī was rather fond of this principle of reasoning, cf. Iq. 31, 16-52, 8; 77, 3-10, 113, 4-7.

<sup>64</sup> E.g. b. Anb. Inq. 172, 23-4; 261, 12, 303, 3; cf. Weil, 1913, 9; 16, a. 9.

<sup>65</sup> b. Anb. Inq. 190, 1.

<sup>66</sup> b. Anb. Lum. 87, 10 sqq. (the discussion is 88, 1 is in fact identical with the problems of Inq. 199, 1-2, when there is an original form or rule, we do not need to bother about additional proof). The example Ibn al-Anbārī cites is the same as the argument Zaggāgī uses in proving that there are only three parts of speech, Iq. 43, 3-7. Cf. also Iq. 129, 12-3.

<sup>67</sup> Gal. ap. Deichgräber, 1930, 59, 8-10: '... si secundum se distinguat proprium a communi per evidentes cogniciones, cf. Gal. ib. 154, 8-11.

<sup>68</sup> Ib. 62, 8: '... determinatio quam discribentes dicunt esse secundum se distinguendum a communi ad quod est secundum unumquodque proprium.

<sup>69</sup> Zaggāgī, Iq. 64-5; quoted by Suy. Iq. 67-9; cf. Mubārak, 1974<sup>2</sup>, 102-13.

learned through the acquisitional norms ('*illat ta'limiyya*). When we hear the expression *inna zaidan qā'imun* (indeed, Zaid is standing) we know that after the particle *inna* the subject is in the accusative, and the predicate in the nominative. By analogy we apply this rule to other expressions of the same type. The '*illa qiyāsiyya* explains the rule by referring to the resemblance between the particle *inna* and the transitive verbs. If we then ask in which respect *inna* resembles the verbs, and why we compare it with the transitive verb, we need the '*illa jadaliyya wa-naẓariyya* (speculative and theoretical norm).

'Theoretical' (*naẓarī*) is evidently a calque of the Greek word *theōrētikós*, just as its counterpart 'practical' ('*amālī*) translates *prak-tikós*. In the scholia on Dionysios Thrax, we frequently find discussions about the division of sciences; in this context the term *theōrētiké* *techné* denotes a science which explains by means of theory (*lógos*), *techné* which investigates only with the aim of looking into something, examining something (*theōreîn*).<sup>70</sup> This is exactly how the term is used by, for instance, Yahyā ibn 'Adī,<sup>71</sup> and by Quṣṣī ibn I. Iqā in his translation of the *Placita Philosophorum*.<sup>72</sup> In the present context *naẓarī* indicates the sort of questions which aim at understanding the substance of the matter, and not at the practical use of it; practice is reserved to the '*illat ta'limiyya*, which teach you how to speak exactly according to the grammatical rules, without explaining the essence and the reasons of those rules.

The '*illa naẓariyya* is sometimes called '*illat al-'illa*; according to Ibn Ginnī this '*illat al-'illa* is not a real cause, but only an explanation of the linguistic facts.<sup>73</sup> Ibn as-Sarrāḡ says that there are two sorts of '*illat*: the linguistic rules that tell us how to speak (= Zaggāgī's '*illat ta'limiyya*); and the explanations of these linguistic rules, e.g. why it is that the subject always has the nominative case ('*illat al-'illa*). However, we do not need to know this reason in order to speak correct Arabic.<sup>74</sup> Obviously, in this system the *ta'lim* represents the factor

<sup>70</sup> Scholia DT 1, 20, 7, 13; 110, 21, 111, 32, 112, 23; 122, 29; 157, 39; 298, 2.

Zaggāgī 96, 17-9: 'As for those of the common people who speak Arabic without declension, and yet make themselves understood, they can only do so when things of common knowledge and daily use are concerned,

*naḥwa*, *qiyās* and *ʿillat al-ʿilla* the factor *ors*, which we will discuss below in connection with the theories concerning the origin of speech.<sup>73</sup>

In this connection we should also mention the story about al-Ḥaṣṣī told by Zaḡḡālī. Al-Ḥaṣṣī, asked by somebody about his use of grammatical norms, answered: 'The Arabs speak according to their instinct and nature, and they know the structure of their speech. There is in their minds a solid knowledge about its norms (*ʿilal*) even if it is not related of them that they possess this knowledge. I considered something a norm whenever I was convinced it was the cause of what I considered its consequence'.<sup>74</sup> In other words, the basis of every grammatical argument is what one hears from the Arabs; our explanations are mere guesses as to what is the reason for their using such-and-such a form. Although we know of other books about the *ʿilal an-naḥw*—by al-Māzini,<sup>75</sup> Qutrub<sup>76</sup> and Ibn Kaṣīr<sup>77</sup>—Zaḡḡālī claims to have been the first to write a book about this subject.<sup>78</sup>

ḥai il' anyone of them would try to explain an ambiguity to someone else without understanding declension, he would not be able to do so' [A 55].

## CHAPTER FIVE

### THE PERIOD OF THE TWO SCHOOLS

<sup>1</sup> Arrange a meeting between Ahmad ibn Yahyā and this Basrian ...<sup>2</sup>

According to the account of the *Fihrist*<sup>1</sup>—which was adopted by Flügel<sup>2</sup>—, the history of Arabic grammar was dominated by the opposition between the Basrian and the Kūfian school, which ultimately coalesced into the school of Baghdad, also called the eclectic or the mixed school. This (simplified) account of the history of the schools was criticized by Weil in his introduction to Ibn al-Anbārī's *Intāḡ fi maṣā'il al-ḥilaf bayna 'n-naḥwīyyīn al-baṣrīyyīn wa-'l-kūfīyyīn*, and recently by Fleisch.<sup>3</sup> Both regard the distinction as an artificial development invented by later grammarians. Their arguments may be summarized as follows: although there existed in Baṣra and Kūfa two different groups of scholars with, probably, different opinions about grammar and about the various details of grammar, they did not consider themselves representatives of 'schools'. It was not even possible for them to do so because they did not meet each other very often, and had no chance to discuss their points of view, not even when they lived in the same city, as was the case with al-Mubarrad (d. 898/285) and Ṭa'lab (d. 904/291). The generation after Mubarrad collected the 'differences of opinion' (*maṣā'il ʿitikāfiyya*), i.e. they projected their own differences of opinion into a former situation which never existed. The school of Baghdad, which is said to have been a fusion of the two systems, was nothing more than a conglomerate of grammarians, who, in retrospect, created the schools of Baṣra and Kūfa: 'Ainsi ces "Bagdadiciens" sont les fondateurs de l'authentique école de Baṣra et du fantôme d'école que fût Kūfa, car

<sup>1</sup> Zaḡḡālī, *Maḡ.* 119, 9-10 [A 55].

<sup>2</sup> *Fihrist*, ed. Flügel: Baṣrians: 39-64; Kūfians: 64-77; von *ḥakayā 'l-maḥababāt*: 77-94.

<sup>3</sup> Flügel, 1862: the history of Arabic linguistics is discussed according to the tripartition 'grammatische Schule von Baṣra' (p. 3); 'grammatische Schule von Kūfa' (p. 117); 'gemischte grammatische Schule' (p. 183).

<sup>4</sup> Weil, 1913, 48-68; Fleisch, 1961, 11 sqq.; 33 sqq.; cf. also Brockelmann GAL, § I, 157-8.

al-Aṣma'i (d. 831/216).<sup>16</sup> The grammarian Abū Muhammad al-Yazidī (d. 817/202)<sup>17</sup> even said: 'I put al-Kisā'i to shame by proving his mistakes in nine questions in the presence of (the caliph) al-Mahdī'.<sup>18</sup> The same holds true for al-Farrā', who is mentioned as having discussions with al-Garmī (d. 839/225),<sup>19</sup> al-Aṣma'i,<sup>20</sup> and al-Māzini.<sup>21</sup> Ṭa'lab had discussions with al-Māzini,<sup>22</sup> and a rather heated altercation with one of Mubarrad's pupils, Zaḡḡāḡ.<sup>23</sup> Nor does the statement seem correct that 'même al-Mubarrad et Ṭa'lab qui vivaient tous deux à Bagdad n'ont engagé que de rares discussions orales',<sup>24</sup> in view of the fact that we counted no less than six accounts of discussions between the two grammarians in Zaḡḡāḡ's *Maḡālīl* alone.<sup>25</sup> Besides, we have Mas'ūdī's statement that Mubarrad loved to discuss discussions with Ṭa'lab, although it is true that Ṭa'lab tried to avoid the contact for fear of Mubarrad's eloquence.<sup>26</sup> His son-in-law, 'Abd Allāh ad-Dinnawarī, attended Mubarrad's lectures in spite of his father-in-law's protests. All this is confirmed by the fact that Ṭa'lab speaks about the Baṣrian and Kūfan grammarians as existing groups and certainly not as divisions set up *ad hoc* by himself.<sup>27</sup>

Finally, al-Kisā'i and al-Farrā' are quoted as discussing a manual, which the Kūfans used in their grammatical education, called *al-Faṣl* or *al-Faṣl*.<sup>28</sup> This proves that there existed something like a grammatical tradition in Kūfa which cannot be explained away, and

must have meant something to people like al-Mubarrad: he says of an amateur of grammar that he 'longs for the grammar of these Kūfans; they collect traditions and in case of disagreement refer to the books'.<sup>29</sup> The words 'these Kūfans' (*hā'ulā' i-kūfīyyīna*) express the same sentiment towards the rival group of grammarians as the words 'this Baṣrian' (*hā'ū i-baṣrī*) in the quotation at the head of this chapter.

How then must we regard these two 'schools'? Is it not right to assume the same rivalry to exist in grammar between the two cities of Baṣra and Kūfa as existed in questions of law and theology and in political and religious matters between them?<sup>30</sup> There is no reason to believe that Muslim universities differed very much from other universities: they were as proud of their own grammar and their own methods as contrasted with those of their rivals as any other 'school' in history. It is true that the resulting differences of opinion were mainly concerned with points of detail, and it is also true that the respective methods were not so different as they were made out to be in reciprocal accusations. As a matter of fact, the only difference between Baṣrian and Kūfan grammarians was that they admitted different forms of words or verses: their handling of grammatical analogy was substantially the same, only their results were different. This shows that it would be a mistake to compare the two Arabic schools to the Greek schools of Alexandria and Pergamon the advocates of analogy and anomaly in speech, respectively. Not only is there nothing that even remotely suggests a connection between the two developments, but there is also nothing that resembles the discussions about analogy or anomaly in speech in the controversies between the two Arabic schools: both agreed that the basis of language is the *qiyās*, grammatical analogy.<sup>31</sup> We could, however, say that the Kūfan school had the tendency to use a more or less rare grammatical phenomenon as evidence for an analogy, or to set up a superficial analogy in order to defend such a phenomenon, which is the reason why they were severely criticized by the Baṣrians.<sup>32</sup> But

<sup>25</sup> Zaḡḡ. *Maḡ.* 107; 109; 115; 119; 124; 349. We have made a choice from the numerous examples, cf. also the parallel texts given in the introduction to the edition of the *Maḡālīl* by A. M. Hārūn.

<sup>26</sup> Mas'ūdī, *Murūḡ.* 8, 235; ad-Dinnawarī (d. 901/289): Hugel, 1862, 192.

<sup>27</sup> *Aḥl al-Baṣra*: *Ta'.* *Maḡ.* 1, 44, 3; 1, 124, 4, 1, 249, 13; 1, 216, 7 etc.; *al-kūfīyyīna*, ib. 1, 58, 6. On the other hand: *maḡna*, ib. 1, 178, 4; *al-kūfīyyīna*, ib. 1, 106, 9; *asṣabūn*, ib. 1, 127, 30; 1, 196, 3-4, etc. He also uses the expression *ṣabūn* *wa-t-taḥlīl wa-asṣabūn*, ib. 1, 42, 8. Cf. the meeting of Ṭa'lab with the old al-Baṣra, *Suy. Muḥb.* 2, 204, 15 sqq.

<sup>28</sup> Zaḡḡ. *Maḡ.* 266; 269. This work is ascribed to the 'founder' of Kūfan grammar, Muḥammad ibn al-Ḥasan ar-Rūḥī, the teacher of Kisā'i and Farrā' (d. ± 805/190); cf. *Suy. Buḡya*, 1, 83-4; Flaisch, 1862, 18-9; Maḡzūmī, 1958, 77 sqq.; Brockelmann, *GAL*, S I, 177.

<sup>29</sup> Zaḡḡ. *Maḡ.* 119, 7-8; 'books' (*kitāb*) probably refers to the grammatical writings of the past [A57].

<sup>30</sup> Cf. e.g. Makrūmī, 1958, 65-6.

<sup>31</sup> b. *Anb. Lata.* 44, 5-8: 'Know that the rejection of analogy is not justified, because the whole of grammar is analogy ... And whoever rejects analogy, rejects grammar itself. No scholar is known to have rejected analogy' [A58]; cf. Weil, 1913, 29.

<sup>32</sup> Cf. the references given by Weil, 1913, 29 sqq. (notes). On the accusation of irregular analogy: ib. p. 39.

on the other hand, it was completely normal for them to use arguments which consisted of two parts: one based on textual evidence and the other on analogy.<sup>33</sup> Together with these criticisms we must keep in mind that it was more or less a standard procedure among grammarians to accuse the opponent of using an irregular analogy (*qiyās 'alā 'l-šādd*) based on forms which were not generally acknowledged. As the Kūfan grammarians were more specialized in ancient poetry than their Baṣrian colleagues<sup>34</sup>—like that great connoisseur of pre-Islamic poetry, al-Mufaḍḍal al-Dabbī, who was a Kūfan (d. ± 786/170)—, they attached greater importance to those forms which occurred in poetry even when they were contrary to the rules, and they were apt to use quotations from the poets to corroborate their theses. But on the other hand, they did not fail to use analogy as a (second) basis for their evidence.<sup>35</sup>

Without trying to play down the differences between the two schools, we have emphasized the fundamental agreement between them on the essence of language and grammar. As for the differences of opinion concerning details of grammar, this is not the place to discuss them. We refer to Weil's introduction to the *ḥudūd*, as well as to Majzūmī's study on the Kūfan school.<sup>36</sup>

<sup>33</sup> Cf. e.g. h. Arb. Ins. 68, 12-1.

<sup>34</sup> Cf. e.g. Fleisch, 1961, 27.

<sup>35</sup> In one instance analogy even serves as the sole basis for their arguments, whereas the Baṣrians in this case rely on the evidence of quotations alone! (h. Arb. Ins. 66).

<sup>36</sup> Weil, 1913; Majzūmī, 1958; also Dail, 1968, 151-242. The sort of confusion that arises around the character of the two 'schools' may be illustrated by a few remarks made by Carter, 1977<sup>3</sup>. First he observes—, in our view correctly—: "... il peut avoir existé des écoles de grammaire répondant à la définition donnée par Schacht des "associations écoles juridiques", à savoir des groupes de savants se distinguant les uns des autres non par un corps de doctrine, mais simplement par leur implantation" (p. 300), but then he repeats once again Weil's opinion about the artificial character of the two schools, which Carter regards as a retrospective creation by Baghdadian grammarians, who attributed everything that contradicted Sibawayhi's *Kitāb* to Kūfan scholars (pp. 301 sqq.). Regardless of these remarks he then tells us that the difference between the two schools may be expressed simply and clearly: Baṣra was prescriptive, whereas Kūfa was descriptive" (pp. 303-4).

## CHAPTER SIX

### THE INFLUENCE OF GREEK LOGIC

"Some people, whose fables one should refuse to accept, think that those who are called the philosophers had a declension and grammatical writings of their own".<sup>1</sup>

We have already discussed the transfer of cultural life in the 9th/3rd century to Baghdad and the consequences of this for Arabic grammar and linguistics. The 'mixing of the two schools' of Baṣra and Kūfa did not lead to a reconciliation of opinions—in this respect Weil and Fleisch are right—, it only brought together linguists from different groups, with the result that gradually the old distinctions between Baṣrian and Kūfan grammarians disappeared. No longer did grammarians adhere to either the Baṣrian or the Kūfan system, but they were free to choose one of two existing opinions on any particular grammatical problem. This new development is described by Muḥarrak in the following way: 'Grammar in the (10th) 4th century in Baghdad did not become a grammar with different schools based on biases and emotions: the leaders followed their own various opinions, and some of them—like al-Rammānī—followed their rationally founded logical-theological convictions, so that the influence of those convictions was discernible in their grammatical methods ... Their scholars used to study the theories of both schools and choose between them, without prejudice in what they chose: some of them usually preferred the school of Baṣra, so that it became possible to call them a continuation of the Baṣrian school in Baghdad; a few others became a continuation of the Kūfan school; still others were Baghdadians, mixing the two sorts of grammar or taking from both of them'.<sup>2</sup> This makes clear how it was possible for the old distinctions to disappear and at the same time to persist, not as a distinction between two groups of grammarians, but as a distinction between two different opinions. It also explains why a Baghdadian school *suo jure* never existed. The non-existence of a 'Baghdadian' school is one of the reasons for Fleisch to conclude that only at Baghdad did grammarians organize

<sup>1</sup> h. Fir. 53b, 42, 13-4, cf. below, note 36.

<sup>2</sup> Muḥarrak, 1962, 329-30.

themselves into two different groups, the 'Basrians' and the 'Kūfians'. However, a 'Baghdadian' school could not even exist, because the grammarians in that city had at their disposal two conflicting opinions on almost every grammatical problem, and they could freely choose either one of them without subjecting themselves to any party discipline. It was only on those secondary points left 'unsolved' by the Basrians and the Kūfians, that they could advance a theory of their own - which is then mentioned as a theory of the 'Baghdadians'.<sup>3</sup> In so far as a *communis opinio* was reached on most points.

One could object that in that case there was no progress at all in Arabic grammar after its transfer to Baghdad. This, of course, is not true. Grammar then occupied itself with problems of a different nature to those of the preceding period. We shall have to distinguish between those elements that were old and constituted a legacy of the past, and those that were new. The latter category will concern us in this chapter.

The new generation of grammarians put to use the achievements of an older period to solve analogous problems. Their methods were refined, although substantially their theories remained the same. More and more complicated problems were invented in order to have something to solve - this activity being one of the favourite pastimes of almost all grammarians: we need only refer to the eternal hair-splitting about the declension of unusual proper nouns and the construction of almost incomprehensible sentences.<sup>4</sup> What is more, every grammarian was obliged to defend time and again the theory he had adopted about a specific problem, and he had consequently to invent more ingenious arguments with which to confound his adversary.

One could make yet another objection to this way of viewing the condition of Arabic grammar in the 9th/3rd and the 10th/4th century: why was it so frequently Kūfan grammar that was considered wrong, and why were the Kūfan grammarians so heavily attacked? We could answer, of course, that the vast reputation of men like al-Jalīlī and Sibawaihi and of al-Māzinī and al-Mubarrad prevailed over

undoubted merits of Kūfan grammarians. But another answer might be suggested. We must not forget that the Kūfan grammarians did not consider themselves legislators of language, technical specialists, but rather amateurs of language and literature, collectors of interesting pieces of poetry. Such an attitude is tantamount to reducing one's importance as a scholar: one becomes an erudite, not a scientific investigator. If on the other hand, a grammarian wants to make himself indispensable, he has to emphasize his importance as a technical specialist, and he must pose as the possessor of a knowledge which is unattainable for the average layman. It is interesting to note that in this respect the schools of Basra and Kūfa resemble the schools of Alexandria and Pergamon, respectively: in both cases it was the most technical school that won the field and that had the greatest attraction for professional grammarians.

When we compare the grammatical treatises written before and after the transfer of grammar to Baghdad, we find an undeniable difference in mentality and approach. We have already mentioned the fact that later grammarians tried to defend the old theories with new arguments, and it is precisely in these new arguments that we find a lot of elements not present before in grammar.<sup>5</sup> Above all, we find that the grammarians in Baghdad had a new set of grammatical notions at their disposal, or rather the same notions as before, but with a completely new purport, and defined in a new way. There now was an interest in the theoretical background of linguistic phenomena which was almost completely absent from earlier writings about grammar and language. Reflections about the origin of speech, for instance, are absent from grammatical literature until the second half of the 10th/4th century.<sup>6</sup> There also arose a methodological concern to define grammatical categories according to the exigencies of logical law, and an awareness of the difficulties inherent in the organization of a system which is to comprise all known facts. Many of the subjects dealt with for instance in Zāğāğī's *Idāh* (e.g. the definition of the parts of speech, their hierarchy, the use of grammar, the reason why certain grammatical procedures are introduced into speech, the nature of declension, and so on) are typical of the discussions in this milieu.<sup>7</sup> The fact that Zāğāğī (d. 949/337) knew almost

<sup>3</sup> Fleisch, 1961, 22. Such a specific theory of the Baghdadis is mentioned for instance, with respect to the nominative of the subject in a sentence like *zaidun akramu-hu* (Zaid, I honoured him) (b. Qim. Bas. I, 199, 6 sqq.; to a morphological question (b. Qim. *Kutub al-mufarrad*, ed. E. Pröbster, Leipzig, 1904 (1961)<sup>2</sup>, I, 2, 4; 15), and to a phonetic question (the vocalization of the gutturals with an 'a', ib. 2, 9, 6-7); cf. Daif, 1968, 245-8.

<sup>4</sup> On proper names: Zim. Muf. pp. 3 sqq. and Fleisch, 1961, 271-5. On 'incomprehensible' sentences: Mub. Moq. 3, 89 sqq.

<sup>5</sup> The use of logic: Zāğāğī, I, 48, 9-10, 59, 13 (*akīlan-naṣar*, i.e. those who use dialectical arguments) and below, chapter VII.

<sup>6</sup> Loosef, 1963, 197 (10), and below, chapter IX.

<sup>7</sup> By this 'milieu' we indicate the grammarians included in the second diagram on

all grammarians of this period personally<sup>9</sup> demonstrates the usefulness of his book for a better understanding of Baghdadian linguistics, especially when we use it to gain an insight into the logical foundation of grammar and its connections with Greek logic and philosophy. From bibliographical works we know that there were similar books by other grammarians, but they have as yet not been rediscovered, or they are still waiting for an editor or a commentator: the *Ḥal an-nahw* of Ibn Kaysān,<sup>10</sup> Ibn as-Sarrāḡ's *Kitāb al-muḡar* and his *Kitāb al-ṣūl*,<sup>11</sup> Rummānī's writings,<sup>12</sup> the *Ḥikm* of Abū 'Alī al-Fārīsī,<sup>13</sup> and Sirāfī's commentary on the *Kitāb*<sup>14</sup> are examples of works which could solve a good deal of problems and uncertainties about this period of Arabic linguistics.

Some of the subjects which are found in the chapters of Zaggāḡī's *Ḥikm* were also discussed by Greek grammarians, and when we compare their methods and their arguments, we find that there is a definite resemblance, above all in the use of logical terms in grammatical debates and the use of dialectical methods. There are grammatical points, too, which the two grammars share: some definitions of the nouns and the verbs;<sup>15</sup> some of the arguments for the priority of the nouns;<sup>16</sup> the distinctions between two layers or levels of speech (impositions);<sup>17</sup> the question whether grammar is useful.<sup>18</sup> The problem is from what sources the Arabs could have derived such knowledge.

pp. 192-194. We refer to the exposé of Trompeter, 1962, who summarizes the most important facts about these grammarians and their works, and gives a short survey of the development of grammatical teaching in the 10th/4th century.

<sup>9</sup> As he himself tells us, *ibid.* pp. 78-80.

<sup>10</sup> Suy. Buḡya, I, 19, 8.

<sup>11</sup> A manuscript of the *Kitāb al-muḡar* has recently been rediscovered in Morocco by Damerdji and edited in Beirut, 1965; cf. Brockelmann, GAL I, 114.

<sup>12</sup> On the writings of Rummānī: Muḥarak, 1963, 87-92; Brockelmann, GAL I, 116; S I, 175. The main source for Muḥarak's study was the *Ḥikm al-Kitāb*, which has not yet been edited; cf. Fiecht, 1961, 35, n. 2; more data about the manuscripts of this work in Hadjil, 1967, pp. 204 sqq. On Rummānī's theological writings: note 63 below.

<sup>13</sup> Three treatises by al-Fārīsī, among them the *Ḥikm* have been discovered in the library of Leningrad University (ms. nr. 944), cf. Mammūja, 1962. Other manuscripts of the *Ḥikm* in the Dār kutub al-miḡriyya (ms. nr. 1006 *naḥw*; cf. Šimurā'ī, 1971, 37-38, who refers to A. I. Šaḥī, *Abū 'Alī al-Fārīsī*, Qaḥira, n.d.) and cf. Brockelmann, GAL, S I, 175-6. The first volume of this work has been edited by F. Š. Faḥḥād, Qaḥira, 1969.

<sup>18</sup> Cf. chapter VII.

In this connection we think first of all of the translations of Greek philosophical works. In the first chapter we assumed that there was direct contact between the first Arabic grammarians and those among the people in the Hellenistic countries who knew Greek and had learned it through traditional grammar. It proved to be impossible to attribute the influence which at that time existed to the writings of Aristotle and his commentators because these had not yet been translated. But in the 10th/4th century there were Arabic translations of Greek writings: it was precisely in this period that the schools of translators flourished and that the Peripatetic writings were commented upon by Arabic philosophers, among them al-Fārābī, who died in 950/339, two years after Zaggāḡī. All translating activities were concentrated in Baghdad, where the caliph al-Ma'mūn had, in about 830/215 founded, or rather enlarged, *Bayt al-Ḥikma* (House of Wisdom). About 25 years later, Ḥunayn ibn Isḥāq, the greatest of the translators, became director of this university, a function he held till his death in 877/264. Another important scholar, from the Ṣābiān community in Ḥarrān, Ṭābit ibn Qurra (d. 901/289) also came to Baghdad and brought with him all the accumulated knowledge of his community. About the same time, Qusṭā ibn Lūqā, a Christian from Ba'labakk, was also working in Baghdad.<sup>19</sup>

But the classical tradition came to Baghdad not only via Syria. Meyerhof proved that the Alexandrian school was another with classical antiquity.<sup>20</sup> We know this from Arabic authors themselves: *Ḥunayn* (d. 956/345) still remembered something about the history of the Alexandrian school and its eventual transfer to the capital of the *Ḥunayn* caliphate;<sup>21</sup> this transfer took place, according to Maḥ'dī,

<sup>19</sup> Brockelmann, GAL, I, 219-29. On Ṭābit ibn Qurra: Brockelmann, GAL, I, 241-6; S I, 334-6; Meyerhof, 1930, 403-4; 412. His *Kitāb al-ḥikma fī 'ilm al-ḥikm* was edited by G. Sobhy, Cairo, 1928. On Qusṭā ibn Lūqā: Brockelmann, GAL, I, 222-4; S I, 365-6. Meyerhof, *ibid.*; Badami, 1968, 190; Daiber, 1968, 3-5. The question of the *Bayt al-Ḥikma* is dealt with by Eche, 1967, 9-57. According to him the first institution of this name was founded under the Umayyads by Mu'awwiya, and continued by Ḥalīd ibn Yazīd ibn Mu'awwiya, who was also the first to further the translation of medical and astrological books. Under the 'Abbāsid caliphs al-Manṣūr, al-Mahdī, and Ḥārūn the collection of Greek books increased. But the apogee of the *Bayt al-Ḥikma* was to be under al-Ma'mūn, who thought of himself as a patron of the sciences, and who was interested in purchasing books in Byzantium.

<sup>20</sup> Meyerhof, 1930.

<sup>21</sup> Maḥ'dī, *Taḥṣīl*, 122, 2-5: '(We have discussed) for what reason education was transferred from Alexandria to Antioch in the days of 'Umar ibn 'Abd al-'Azīz; then it was transferred to Ḥarrān in the days of al-Mu'awwīkī, then it passed on to Qusṭā and Yūsuf ibn 'Alī in the days of al-Mu'adad, and he (sc. Yūsuf) died in Baghdad in the days of al-Mu'adad ...' [A 59]; cf. Meyerhof, 1930, 407; Georj, 1948, 7.

during the reign of the caliph al-Mu'tadid (892/279-902/290). Important in this context is above all the chronology: in the second half of the 9th/3rd century, a large number of scholars came to Baghdad with a knowledge of Greek that was sufficient to translate fairly complicated philosophical works from Greek into Syriac and/or Arabic. And in the second place, there was a large collection of translated Greek logical writings at the disposal of those who could read Greek language themselves.

It has generally been recognized that Greek translations played an important role in the history of Arabic culture, but the role of Greek translators has not been given the attention it deserved. That they knew not only Greek, but also the system of Greek grammar as it was still taught at that time at the Byzantine universities, seems self-evident. It is also confirmed by some sources. Hunain ibn Ishāq spent some years in Constantinople in order to study Greek<sup>21</sup>—thus continuing the tradition of scholars like Jacob of Edessa—<sup>22</sup> and he himself wrote an Arabic grammar according to the Greek system.<sup>23</sup> It is even said that Hunain wrote about Greek grammar. Excerpts from his Arabic grammar are probably given by Khwārizmī.<sup>24</sup> In later times, we hear that the Byzantine scholar Psellus even had among his pupils Christians and Arabs.<sup>25</sup> That this is no mere boast is proved by the fact that we have the name of at least one Arab from Baghdad who, according to an Arabic source, studied in Constantinople at this time (about 1050/440): Abū 'l-Ḥasan al-Muḥṭār, who was among the pupils of Psellus.<sup>26</sup> If we accept Meyerhof's identification of the 'Theodosios' mentioned by al-Muḥṭār with the famous Alexandrian grammarian (first half 5th century A.D.),<sup>27</sup> in Byzantine times was one of the great authorities.<sup>28</sup> We would have important evidence of the fact that at least one Greek grammarian

<sup>21</sup> Qūṭīb, *Ta'riḥ*, pp. 173-4; Madkur, 1969<sup>2</sup>, 33; on Hunain: Brockelmann, *GAL*, I, 324-7; S I, 366-9; Bedawī, 1968, 188-9. To be added to the bibliography: Meyerhof, 1926.

<sup>22</sup> Cf. above, chapter I, note 20.

<sup>23</sup> Merr, 1889, 105-6.

<sup>24</sup> *Ḥayr*, *Maf*, 46, 3-10; cf. above, chapter II, note 10. *Ḥunain* and *Uṣāl*: above, chapter I, 190-4. According to Ma'ūdī, *Tanbīh*, 112, 13 sqq., Hunain translated the *Septuagint* into Arabic.

<sup>25</sup> Sathas, *Metaphisikē Biblothekē*, Venice, 1872-94 (1972), 3, 111; Krumpholtz, 1897<sup>2</sup>, 433.

<sup>26</sup> Fuchs, 1926, but cf. Peters, 1968, 21. On Abū 'l-Ḥasan al-Muḥṭār: Whalenfeld, 1849, nr. 133; cf. Meyerhof, 1930, 426.

<sup>27</sup> Meyerhof, 1930, 397; Hilgard, *Grammaticae Graeci*, IV, 1, V-IX.

was known in the Arabic world. Al-Muḥṭār could have heard about Theodosios during his studies in Constantinople.

In fact, it is altogether possible that contact in cultural and scientific matters between the Byzantine and the Muslim world was more regular than is normally assumed. To mention only one example: the mission of the famous apostle of the Slavonic peoples, Kyrillos, to the Saracenes. This mission took place in the second half of the ninth century A.D. Kyrillos was interested in grammar, as is evident from his translations of grammatical works—one work is mentioned about the eight parts of speech—, his study of the Hebrew and the Samaritan language, which he could read fluently, and, of course, by his work on the Slavonic alphabet.<sup>29</sup> It seems rather improbable for such a man not to have engaged in linguistic discussions with his Muslim colleagues.<sup>30</sup> There is also the matter of the theological discussions between Muslims and Byzantine Christians, which continued throughout the Arabo-Byzantine conflict and acquainted the Arabs with many elements of Greek philosophical and logical doctrine.<sup>31</sup>

Besides, we must keep in mind that precisely this period witnessed a revival of science and art in Byzantium under the *otkoumenikos didaskalos* of the patriarchal academy, Photios (d. ± 891/278).<sup>32</sup> We wonder if there could be a correlation between this 'Byzantine renaissance' and the sudden interest in Greek science in Baghdad. This hypothesis could be studied in the light of the Arabo-Byzantine political relations in the 9th/3rd century.<sup>33</sup> Anyhow, these relations

<sup>29</sup> On Kyrillos: Diehl, 1972, *Bulboch*, 1972<sup>2</sup>, 63-8; the authenticity of this mission has been questioned, ib. p. 193, n. 45.

<sup>30</sup> We could also refer to Photios' (d. ± 891/278) embassy to the 'Amaylun' in 855/241, during which he collected materials for his (Greek) anthology; cf. Peters, 1968, 21; Herppendinger, 1956, *RE* XX, I, 677, 689.

<sup>31</sup> Cf. above, chapter I, note 9; Vryonis, 1971, 421-36.

<sup>32</sup> Vasilev, 1970<sup>2</sup>, 63-8; on Photios: Krumpholtz, 1897<sup>2</sup>, 73-9, 515-24; Peters, 1968, 23; Drorak, 1950. Speck, 1974, argues convincingly against the existence in Byzantium of a state university: the schools of higher education were private institutions with different levels of teaching. They received financial support of a private person—who might even be the emperor himself, as in the case of Konstantinos VII Porphyrogenitos (913/301 - 959/355)—, but they were never part of any official educational system. According to Speck, the *otkoumenikos didaskalos* was not connected with any 'university' or 'academy' at all (ib. 74-91). For our purpose, however, this correction of the tradition is irrelevant: whether these schools did or did not possess an official status, their cultural importance remained the same.

<sup>33</sup> Vasilev, 1935-68; Canard, 1973, a collection of articles; particularly interesting are *Quelques aspects de l'évolution des relations entre Byzance et les Arabes* (1956); *La prise d'Héraclée et les relations entre Hārūn al-Rashīd et l'empereur Nicéphore Ier* (1962); *Les relations politiques et sociales entre Byzance et les Arabes* (1964).

were friendly enough to enable Arab caliphs to send for Greek manuscripts to Constantinople – which is reported about al-Ma'mūn and al-Manṣūr.<sup>32</sup> And, in times of war, there always was an opportunity of obtaining Greek manuscripts in the course of a military expedition: al-Sāfi recommends the translation of such manuscripts – though only if they contain 'medicine or useful sciences'.<sup>33</sup>

However, except for the possibility that Theodosios the grammarian was mentioned by al-Muhtār, no names of Greek grammarians are given in Arabic literature. This point is emphasized by Gätje as a serious setback for any theory which tries to explain the resemblances between Greek and Arabic grammar by supposing a contact between the two cultures.<sup>34</sup> The explanation could be that the general attitude of Arabic scholars towards foreign culture was rather negative; thus, for instance, Ibn Fāris: 'Some people, whose fables one should refuse to accept, think that those who are called the philosophers (i.e. the Greek philosophers) had a declension and grammatical writings of their own. Ahmad Ibn Fāris says: we do not go in for that sort of talk'.<sup>35</sup> We do not assert that all grammarians were as chauvinistic and narrow-minded as Ibn Fāris, but certainly the belief in the superiority of the Arabic language and Arabic grammar was very strong among them.<sup>36</sup> This could be the reason why grammarians did not mention any Greek grammarian.

There is one instance of a Greek name mentioned in connection with grammar, namely in the notes of al-Ḥasan ibn Suwār (born in 942/331)<sup>37</sup> on the Arabic version of Aristotle's *Categoriae*. To Ari-

<sup>32</sup> Hill, 1968<sup>2</sup>, 309 sqq. We may also mention the case of Leon Philosophos: one of his pupils had been taken prisoner by the Arabs, and the caliph al-Ma'mūn, amazed by his knowledge, tried unsuccessfully to obtain the services of Leon at the caliphal court, *Theophrastus continuatus*, 189-90, Speck, 1974, 2, 4, note 17.

<sup>33</sup> Meyerhof, 1933, 122, n. 2: Sāfi's ep. Tabarī, *Ḥikm al-fuṣūḥ*. Ed. Schacht. Leiden, 1933, 178, 28 sqq.

<sup>34</sup> Gätje, 1971, 23.

<sup>35</sup> Ibn Fāris, *Ṣubḥ*, 42, 13-5 [A80].

<sup>36</sup> Ibn Fāris, *Ṣubḥ*, 42, 6; also: Zayḥ, *ib.*, 45, 3-5; Sājūdī, *op. cit.*, pp. 293-4; Tawh, *Imāz*, 1, 76, 13-78, 5 (cf. Bergé, 1972); cf. the critical remarks of Ibn Hazm, *ib.*, 1, 32, 8-10.

<sup>37</sup> On Ibn Suwār: Brockelmann, *GAL*, 3 I, 378 (Ibn Suwār). Badawi, 1988, 192; Meyerhof, 1930, 42. He was born in 942/331, and was a pupil of another famous translator, Yahyā ibn 'Adī (Brockelmann, *GAL* I, 228, 3 I, 370); he died after 1013/408. Ibn Suwār not only gives his own comments on the *Categoriae*, but also translates sometimes or gives paraphrases of Greek commentaries. He quotes Ammonios by name (369, 8 sqq.) and gives paraphrases of parts of his commentaries in a number of passages (361, 14-22 and 363, 2-3, cf. Ammon, pp. 11-2, ed. Busse: 366, 11-4, cf. Ammon 17,

stotle's words '... like, for instance, grammar, because it has the mind as its substrate', he adds '... as for instance Sibawaihi with the Arabs, and Sūsānos (?) with the Greeks'.<sup>38</sup> We have sought in vain to fit the name into a form which is more likely to be a Greek name; maybe the person meant is Johannes the Grammarian (Johannes Philoponos),<sup>39</sup> but he was a philosopher, not a grammarian.

Fortunately we at least have evidence that al-Fārābī knew and even studied Greek grammarians. Speaking about a group of words, he says: 'Those words form a part of the group of significant words, which are called by the grammarians *ḥurūf*, and which are used to denote meanings. These *ḥurūf* are also divided into many sub-divisions, although the experts of Arabic grammar have not been accustomed so far to giving a special name to each sub-division. So, in defining these sub-divisions, we will have to use the names which reached us from the grammatical experts of the people of the Greek language, since they gave each sub-division its own name'.<sup>40</sup> We have studied ~~above~~ <sup>here</sup> various types of *ḥurūf*.<sup>41</sup> Gätje studied al-Fārābī's *Kitāb al-alfāz al-musta'mala fi 'l-manṭiq*, where this quotation is found, and

18 sqq.). According to Walzer, 1963<sup>2</sup>, 74-5, it is not necessary to assume the existence of a commentary previous to Simplicius as Ibn Suwār's ultimate source, since his references to earlier commentaries are also found in Simplicius (no. for instance, b. Suwār, 369, 8 sqq., cf. Simplicius in Aristotle, categ. 18, 9 sqq. ed. Kalbfleisch). But this does not apply to the important passages about the theory of the 'first and second impression', which exercised a considerable influence on the Arabic theories about the nature of speech, cf. below, chapter IX. We can also mention Ibn Suwār's use of the word *ḥurūf* as an example of a meaningless expression, this word is identical with the *ḥurūf* (*ḥurūf* 3, 213, 21, the word was also used by the Aristotelian commentators) it would be very interesting to have at our disposal all notes written by Ibn Suwār in the manuscript of the translation of the *Organon* (Bibliothèque Nationale nr. 2346), cf. Georr, 1948, 190; Kraus, 1962, 2, 231, n. 2.

<sup>38</sup> Text: Georr, 1948, 320, 5-6 = Aristot. categ. 1 = 23-6, notes. b. Suwār, 378, no. 44 [A61].

<sup>39</sup> Sūsānos must be a mistake: the only possible emendation I can think of is Johannes spelled in the Greek form, not in the Arabic *Yuhanna* (i.e. *y - w - h - n - a*), instead of the text given by Georr: *y - n - s - y - n - a*. Just as the name *Hippokratēs* occurs in two forms: the current form *Ḥiqrāṭis*, and an earlier form *Ḥiqrāṭis*. In the writings of Yahyā ibn Mūsawwī (Walzer, 1963<sup>2</sup>, 112) Johannes Philoponos, the Alexandrian philosopher, was known in the Arabic tradition as *aw-Nahwī* (the Grammarian), he lived in the first half of the 6th century A.D.: Krumbacher, 1897<sup>2</sup>, 381-2; Süssow, 1960<sup>2</sup>, 141-3; Meyerhof, 1930, 397; Qifti, *Ta'rip*, 356, 14; Meyerhof, 1931, Saffrey, 1954. He is probably the Philoponos whose words are quoted in the scholia D 7, (547, 24 sqq., cf. also 524, 12) concerning the question whether the nominative is a case; cf. also below, chapter III B, note 34.

<sup>41</sup> Far. Alf. 42, 7-12 [A62]; cf. Sarb, 54, 9.

<sup>42</sup> Cf. chapter III A.

abundant in Ṭauḥīdī's reproduction of the conversations [redacted] Ṣiḡistānī held with other scholars in the booksellers' quarter in Baghdad.<sup>56</sup> His opponents were not as obsessed by professional pride as as-Sirāfi, though.

On the whole, there is no reason to suppose such a state of enmity and rivalry to exist between logicians and grammarians as we are led to believe from the foregoing remarks. A striking example of good cooperation is the arrangement al-Fārābī had with the grammarian Ibn as-Sarrāḡ (d. 928/316): the grammarian learned music and logic from the logician, who in his turn studied grammar with the grammarian.<sup>57</sup> At an earlier time we find the logician-philosopher al-Kindī (d. + 873/260) visiting Baṣra and discussing with al-Mubarrad a linguistic problem.<sup>58</sup> We may also refer to Zaghāgī's repeated assertion that he tries to deal with his subjects according to grammatical standards, and not according to the theories of logic<sup>59</sup>—which is typical for the need of his time to distinguish carefully [redacted] grammatical and logical ideas and opinions.

This is also confirmed by the fact that not everyone succeeded in making the distinction between grammar and logic which Zaghāgī feels is necessary. More than once we find the grammarian accused of mixing grammar with logic. We have already mentioned Ibn as-Sarrāḡ, who studied with al-Fārābī; [redacted] what we know [redacted] his grammatical work, we may deduce that logic indeed did have a lasting influence on [redacted] ideas about language: he used logical terms, and rearranged the traditional facts of grammar according to logical theory.<sup>60</sup> It seems very probable that Ibn as-Sarrāḡ was one of the primary sources in transmitting the logical materials from his teacher al-Fārābī to the Baghdadian grammarians, since among his pupils were az-Zaghāgī, al-Fārīsī, as-Sirāfi, and ar-Rummānī. We certainly do not

indefinite (*al-fāṣil al-ṣābiḡ*), which is mentioned as a matter of disagreement between the Basrians and the Kufans (h. Anb. Ins. 181-2; Asr. II, 9; the Kufans allowed this adjunction, whereas the Basrians rejected it; cfr. 'Ukb. Mas. p. 111). The same point is touched in the discussions about the identity of *waṣṣ* and *muṣṣaww*, cf. below, chapter VIII, note 37.

<sup>56</sup> For instance in his *Maqāṣid*: Ṭauḥīdī was a pupil of ar-Rummānī, the logician-grammarian.

<sup>57</sup> Kraus, 1942, 2, 251, n. 2 on the authority of b. A. Usābī'a, 2, 136.

<sup>58</sup> The discussion between Mubarrad and Kindī concerned the question if the word *ḥaw* is a superfluous word, Rāmī, *Maf.* 2, 42 n. 43. 4.

<sup>59</sup> Cf. 48, B. 16; 58, 6. 13; cf. Mubārak, 1974<sup>2</sup>, 102-17.

<sup>60</sup> h. Anb. Nuzha, 150, 7-8; Qifī, *Isbāḥ*, 3, 149; Filāḥ, ed. Fihgīl p. 142; Say. Buḡya, I, 109-10, cf. Apper, 1963, XVIII-XIX.

assert that each of these grammarians was as devoted a logician as Ibn as-Sarrāḡ was, but somehow they contributed all of them to the influence of logic on grammar, if only because they mentioned certain logical terms or theories.

As for ar-Rummānī, he carried on the tradition of his teacher, Ibn as-Sarrāḡ, and even went so far with his logical studies, that it caused him to be accused of making a mixture of logic and grammar, which was incomprehensible to normal grammarians.<sup>61</sup> We know, moreover, [redacted] ar-Rummānī was a Mu'tazilite.<sup>62</sup> We shall see below that most Baghdadian grammarians belonged to the Mu'tazila or [redacted] connection with [redacted] group of philosophers—which could explain their interest in things logical. Rummānī also wrote about the most important problem of Mu'tazilite theology: the creation of the Qur'ān and the incomparability of its style (notably in his *Kitāb an-nukat fi ṭalāḥ al-Qur'ān*).<sup>63</sup> Both subjects had much in common with grammar [redacted] linguistic philosophy, as we can see in the writings of that great Mu'tazilite, 'Abd al-Gabbār. The discussions about the creation of the Qur'ān were closely linked with the problem of the creation of speech.<sup>64</sup>

We have come to know as-Sirāfi as a fierce opponent of the new logic, but even he did not escape its influence. He, a pupil of Ibn as-Sarrāḡ and of the famous Mu'tazilite al-Gubbā'i (d. 915/303), spent much of his time studying Greek authors—among them Ptolemaios and Eukleides—, and also devoted his energy to the study of logic, in spite of his opposition to Maṭṭī ibn Yūnus. As a matter of fact, his opposition was not directed at logic in general, but against the new, Aristotelian logic, as it was being preached by Maṭṭī, and against its extravagant claims to supremacy in science.<sup>65</sup>

Another scholar of this period, Ibn Kaṣīr (d. 932/320) probably wrote about both disciplines: his definition of the noun was given in two versions, a grammatical one, and a logical one according to the Aristotelian tradition, as we know from Zaghāgī.<sup>66</sup> It is typical of the

<sup>66</sup> M. 50, 11-6.

scholars of his time that they forgot about the ancient differences between Basrian and Kufan grammar. Sirāfi tells us so explicitly about Ibn Kaṣṣān<sup>67</sup> and about two other teachers of Zaggāgi, ʿAbū Suqair (d. 929/317) and Ibn al-Ḥayyāḥ (d. 932/320).<sup>68</sup>

The influence of pure, mostly Peripatetic, Greek logic remained preponderant in the logical works of Arabic philosophers. Many of the ideas and terms of the Aristotelian tradition are found for instance in Ḡazzālī's works, such as the *Kitāb al-maqqāl al-awwal fī asmāʾ Allāh al-ḥusnā*, the *Kitāb al-mustaṣfā*, the *Maʿyār al-ʿilm*, and the *Kitāb al-maʿārif al-aqliyya*.<sup>69</sup> We may also refer to Ibn Ḥazm's *Kitāb al-taqrīb li-ḥawḍ al-manṭiq*<sup>70</sup> to the section about logic in Ḥwārizmī's *Maḥṣūṭ al-ʿulūm*. But the most important contribution to the knowledge of Aristotelian logic in the Arabic world came from Sīnā's commentaries and from the works of Fārābī: notably his commentary on the *De Interpretatione*, and the section about logic in his *ʿIḥyāʾ al-ʿulūm*.<sup>71</sup> From these writings Aristotelian logic found its way to grammar, though it never succeeded in replacing completely the earlier influence of the direct contact with Greek grammar.

It should be noted that with the introduction of Greek logic other elements besides the Peripatetic theory were brought to the Arabic world, among them Stoic elements. This applies for instance to Stoic materialism, which had a strong influence on the Muʿtazilite philosopher Naẓẓām (d. 845/231) and which is also discernible in the

theories about the nature of sound.<sup>72</sup> The theory of meaning and the Stoic traces found in it will be discussed below, as well as those Stoic elements which are present in Arabic grammatical theories.<sup>73</sup>

## CHAPTER SEVEN

## THE USE OF LOGIC IN GRAMMAR

'These are not grammatical terms or issues, but they are taken from the technical language of the logicians, although a number of grammarians did accept them'.<sup>1</sup>

Just like the Greek commentators on Dionysios' *Thrax Téchnē* 10th century Arabic grammarians tried to give their grammatical writings a learned image by using logical arguments, philosophical terms, and dialectic methods: in both cases the results were not always fortunate. Zaġġāġī is typical of this trend in Arabic grammar. He evidently believes that reason precedes religious tradition: **هو** was, after all, a Mu'tazilite;<sup>2</sup> he is also convinced that knowledge is developed through reason, and that it is not innate, because that would extremely limit man's free will, and his responsibility for his own acts.<sup>3</sup> We may, therefore, expect him to **هو** influenced by the logical theories of his time. On the other hand, it is obvious that he sincerely tries to keep logic and grammar separate, although **هو** **هو** not always succeed.<sup>4</sup> In this chapter we will quote a few examples from Zaġġāġī's *Idāh* to illustrate the use of logic in grammar.

In the second chapter of the *Idāh* there is a discussion about the definition of 'definition' and of 'philosophy'. Such discussions were typical of the kind of grammar that was in vogue at Zaġġāġī's time. They are also typical of the scholia on Dionysios Thrax: **هو** scholia begin with definitions of *technē*, 'definition', etc.<sup>5</sup> In his discussion Zaġġāġī followed Fārābī's introduction to Porphyrios' *Enagōgē*.<sup>6</sup> He

mentions three definitions, the first of which is the one preferred by Fārābī.<sup>7</sup>

1. The first definition—'a definition is a concise way of expressing the nature of the thing to which it is applied'—is a literal translation of the definition which is given in the Greek scholia, without any indication of the source.<sup>8</sup> The word 'concise' (*muḥtaṣas*) in the Greek texts suggests a Stoic origin, when we take into account the importance of the notion 'conciseness' (*sumptōnē*) in the Stoic system of the virtues of speech.<sup>9</sup>
2. The definition chosen by Zaġġāġī is that of the Aristotelian school: 'Definition is what expresses the essence of a thing' (*lógos ho tá tē ēn eínai semainōn*).<sup>10</sup> This definition was also quoted in Greek grammatical writings.<sup>11</sup> In the Arabic world, it was avoided by orthodox theologians because of its connotation of a causal relation between the object defined and the decisive terms used for defining its nature: theologians used a descriptive type of definition instead (cf. Zaġġāġī's **هو** definition). Zaġġāġī, of course, does not have such qualms about causality, **هو** therefore uses the Aristotelian type of definition, in accordance with his logical and Mu'tazilite leanings, although in practice he acknowledges the value of a descriptive definition.<sup>12</sup>
3. The type of definition favoured by the theologians is the description (*nusx*), about which van Ess observes: 'One was not primarily concerned with the problem how to find out the essence of a thing, but rather how to circumscribe it in the shortest way so that everybody could easily grasp what was meant'.<sup>13</sup> In other words, the aim of the description is to differentiate the object to be defined from other objects resembling it, by mentioning a characteristic property it does not share with **هو** other object. In Fārābī's words: 'Both (sc. the definition and the description) share the use of the genus of the thing, and they differ in that the definition

<sup>1</sup> Zaġġ. Id. 48, 11-2 [A67].

<sup>10</sup> Aristot. top. 1, 5, 101 b 39.

<sup>11</sup> E.g. scholia D.T. 107, 1-2.

<sup>12</sup> Cf. his discussion concerning the definition of philosophy (Id. 46, 12 sqq.); also his answer to the objection against Muḥarrak's descriptive definition of the nous, Id. 51, 4-6.

<sup>13</sup> van Ess, 1970, 36.

adds to the genus the substantial *differentiae*, while the description (adds) the accidental *differentiae*.<sup>14</sup>

It is this type of definition which Zaggāgī refers to when he talks about the differences between the various definitions of 'philosophy': in his view, definitions may indeed differ, since they are made for different aims.<sup>15</sup> It is evident that this type of definition is related to the Stoic 'description' (*hupographē*), which is defined by Chrysippos as 'showing the characteristic properties' (*τὸ κατὰ ἰδίαν ἀποδοῦναι*).<sup>16</sup>

Every art should have its ultimate justification in that it is useful to man; this aspect of science appears in every definition of *τέχνη* from Aristotle to the Stoics.<sup>17</sup> Grammar, too, must have its usefulness: its aim (*telos téchνης* = *fa'ida*).<sup>18</sup> The aim of grammar is to guarantee our speaking correctly according to the rules of grammar (*hellenismos, latinus, rabbi*).<sup>19</sup> Its usefulness is to be found in the fact that through grammar we are able to read correctly and to understand old and venerable writings that would be otherwise incomprehensible to us (e.g. the poems of Homer, the Qur'ān).<sup>20</sup>

Often philosophical terms and doctrines are used in order to 'clarify the discussion'; we will quote a few examples from Zaggāgī's *Kitāb*, namely from the discussion concerning the priority of the masdar. This controversy between the Baṣrians and the Kūfians has been dealt with

<sup>14</sup> Translation Dunlop, 1951, 83; cf. also Zaggāgī's analysis of the definition of 'man', *ibid.* 46, 7-31.

<sup>15</sup> For instance in Muḥarrad's definition of the noun the intention to define the noun in terms of 'subjectivity' (*ḥaqīqat al-ḥusnā*). Zaggāgī, *ibid.* 51, 5.

<sup>16</sup> SVP 2, 226; cf. van Eas, 1970, 37 sqq. and note 90; van den Bergh, 1954, 2, 84, 129.

<sup>17</sup> Zaggāgī, *ibid.* 95-6; Steinthal, 1891<sup>2</sup>, 183-5; cf. *Encyclop. D.T.* 11:3: 'An *aim* (*telos*) is a systematic collection of observations that are acquired by experience; it serves a useful and vital end' [C39], is Stoic definition, cf. Zenon, SVP 1, 21; cf. Far. ap. Dunlop, 1951, 84-5: 'We say that an art is a faculty found in the soul, such that it produces organization in a subject towards a particular aim'. In Arabic literature this is the fourth of the 'four scientific questions'. Roscher, 1966, 40; Dunlop, 1951, 79 (Fārūbī's introduction to Porphyrios' *Isagōgē*).

<sup>18</sup> Steinthal, 1891<sup>2</sup>, 2, 179-80; 188-9; *fa'ida*: cf. chapter 4.

<sup>19</sup> 'Aim' and 'usefulness' amount, of course, almost to the same thing. For the 'aim of grammar': Dion. Thr. pp. 5-6 (enumeration of the parts of grammar), and cf. scholia *ibid.* 2, 22; 109, 37-8; 446, 6; Proklos, scholia in *Crat.* 12, 13-6.

<sup>20</sup> Cf. the claim of the grammarians against Sextus Empiricus that grammar is useful, because only through grammar can we discuss what the poets really meant, *Sext. Empir. adv. math.* 1, 270 sqq.

above in so far as it contains Greek grammatical elements.<sup>21</sup> The Baṣrians claimed that the masdar was prior to the verb, and some of them adduced proofs borrowed from logic. For instance, in order to prove that the masdar is prior to the verb because it is the verbal noun, they say that the agent precedes his action, and that he must know the action before he can perform it.<sup>22</sup> We may point to the Mu'tazilite answer to an objection to their doctrine that Allāh has eternal knowledge: to meet the objection that, Allāh's knowledge being eternal, the object of that knowledge must be eternal, too, the Mu'tazilites introduce the distinction between possibility and actualization of an action. Allāh's knowing an action implies the possibility of that action, not the actual happening of it. In the same way, someone who is eating must necessarily have been before in the state of knowing the action of eating; otherwise he could never have started to perform the action of eating.<sup>23</sup>

In the same discussion it is argued by the Baṣrians that the sounds of the masdar are found in all verbal forms, which implies that the verbal forms are derived from the masdar, and not the other way round. Zaggāgī then quotes the *ahl al-naḥar*, i.e. those scholars who use dialectic methods.<sup>24</sup> They compare the relation between masdar and verbal forms to the relation between a metal and the objects made from that metal; the 'idea' (*ma'na*) of silver is found in a silver ring, but the 'idea' of a ring is not found in silver.

The example of the metal (silver) and the ring formed from it is traditional; there are other instances, where it is used for explaining the production of something out of nothing.<sup>25</sup> Zaggāgī's example shows that for him—in accordance with the Mu'tazilite theory—the potentiality of change is not located in the changing object, but in the *causa efficiens*, i.e. in the last resort, Allāh, whether as the prime and only Creator, or as the Creator of the *causae secundae*. This

<sup>21</sup> Cf. above, chapter III C.

<sup>22</sup> Zaggāgī, *ibid.* 56, 34-57, 3; 73, 15-9; cf. the discussion concerning the priority of the masdar, chapter III C.

<sup>23</sup> Cf. Abū'l-Ḥasan al-Jayyālī (d. after 912/300), *Kitāb al-ḥaqīqat ma'na-radd 'alā ḥal al-kawāfī al-muḥall*, ed. transl. Nader, Bayrout, 1957, 61, 17-22, 1, cf. Nader, 1936, 68-9.

<sup>24</sup> Zaggāgī, *ibid.* 59, 13-60, 2.

<sup>25</sup> Van den Bergh, 1954, 2, 62, n. 84.1: the production of a ring from the original silver implies the appearance of a new accident and cannot be the result of an inherent principle; cf. Frank, 1966, 21 sqq. A different instance, in Qurṭubī, is quoted by Heinrichs, 1969, 75.

view differs fundamentally from the view of the *aṣḥāb al-ḥay'ala*, who believe that the objects already contain the idea of their future shape, and that in everything there is an inherent principle of potential change—which is more in line with Greek philosophy. Sextus Empiricus, for instance, used the example of bronze and a statue made from it in order to explain the susceptibility of certain materials to become certain products.<sup>26</sup>

As an example of the 'logical' turn a grammatical discussion may take, we will analyse now another passage from Zaḡḡāḡ's discussion of the thesis that the masdar comes before the verb, because it is a verbal noun, and has, therefore, priority. This thesis is refuted by an adversary with arguments borrowed from logic and philosophy.<sup>27</sup> The line this reasoning takes is rather complex and it includes a variety of arguments, so that the connection is ~~unclear~~ and sometimes nearly incomprehensible. We will deal with the various elements point by point. The adversary says: 'We do not say that nouns are prior to verbs in an absolute sense, but we say that the noun is prior to the verb of which it is the agent. Now, in this chapter we have already reached an agreement on the fact that "noun" has the technical meaning of "nominatum" because it takes its place when something is predicated about it. We say therefore that Zaid precedes the verb of which he is the agent, but it does not follow from this that he has precedence over a verb of which someone else is the agent. If this is true, then a masdar does not necessarily have precedence only because it is the verbal noun. Nor do we assert in an absolute sense that a noun has precedence over its nominatum, and that it never exists after it: on the contrary, noun and nominatum must ~~co-exist~~ exist ~~together~~ by side during the time of their existence. With "noun" we indicate the meaning of its rights to "nounness". Do you not see that you can call a given person during his lifetime "Zaid", then you can take this name away from him and call him "Bakr", and after that you can take that name away from him and call him "Umar"? But his right to "nounness", you cannot take away: the two of them (sc. nominatum and nounness) always coexist. Do you not see that something befalls it (sc. the nominatum), something which does not leave it, something which it possesses in each and every circumstance? That is the reason why people make the mistake of thinking that a noun is identical

with its nominatum. There are some people who call something that does not exist a thing, others deny this. ... As it is now certain that the ~~noun~~ has no precedence over the nominatum, your argumentation that the masdar has precedence over the verb, because it is its noun, and that it therefore comes necessarily before the verb, has lost its validity'.<sup>28</sup>

1. In the first place, the anonymous adversary states that one cannot make the generalization that nouns come before verbs. One could say that a noun comes before its own verb, just as an agent comes before his own action, though not before the action of someone else. In this context 'noun' is used in the sense of 'the person who performs the real action'.<sup>29</sup> When we know that the ~~person~~ Zaid comes before his own action, and not necessarily before the action of someone else, we also know that the noun *zaid* comes only before its own verb, and not necessarily before another one. Hence it follows that we cannot use the argument of the priority of the nouns in order to defend the priority of the masdar on the ground of its being *ism li-ḥi* (verbal noun).<sup>30</sup>
2. Even if we cannot use the thesis of an absolute priority of nouns above verbs, there is still another possibility: if we could prove that an *ism* (in this context 'a name', 'a word') precedes its *musammad* (the object denoted by the word, in this case the verb: the masdar is the *ism al-ḥi*, therefore, the *ḥi* is named by the masdar, and is its *musammad*), we could show that the masdar is prior to the verb. This turns out, however, to be as fruitless an argument as the first one, because it is impossible to accept anything but the coexistence of the *ism* and the *musammad*: it is inevitable that they exist at the same time.<sup>31</sup>

<sup>26</sup> Zaḡḡ. IV, 57, 4-58, 5 [A. 68]. In line 11 read *al-samīya* for *li-tamīya*.

<sup>27</sup> Using *ism* with the sense of *musammad* is permitted in the *qāṭir*, i.e. when you are talking about nouns and explaining their relations with verbs; cf. chapter VIII, note 75.

<sup>28</sup> The use of the verb *ism li-ḥi* (57, 4) instead of the usual *ism al-ḥi* (e.g. 56, 3)—if it is not a mere printing error—could be an indication of the fact that the speaker, who is defending the Kūfan theory, is aware of Kūfan terminology, which uses *ism al-ḥi* in another sense, namely with the meaning of 'interjection' (cf. Majzūmī, 1938, 308), and that in this way he tries to avoid ambiguity. The opposite procedure is followed by Ibn Qimā (Hāq. 3, 37, 5) who uses *ism li-ḥi* (= *ism samīya li-ḥi* 1-ḥi, III, 1, 36, 11) to indicate those words which are called by the Kūfians *ism al-ḥi*.

<sup>31</sup> Van Eem, 1970, 45. According to Stoic theory a sign can only be a sign of something it coexists with (*señalar pade pade*) (SVF 2, 73, 24). Cf. Steinhilber, 1966, 1, 308-9: 'Da das Zeichen überhaupt ein Gedankenwesen (*noēton*) ist—denn

<sup>26</sup> Sext. Emp. adv. math. 1, 108; cf. Sophr. 2, 410, 36-411, 2.

<sup>27</sup> For the grammatical arguments, cf. above, chapter III C.

3. That *ism* and *musammā* indeed always coexist is confirmed by the definition of the notion *ism*, which means nothing more than the right of a certain thing to being named, to nounness (independently of the concrete name it receives, or of a change of name<sup>32</sup>). Every thing (*šay'*) has this right and it cannot lose it, because it is an essential part of its being (*maḥḥūd bi-waḥḥūdihi*).
4. The notion *šay'* is then elaborated within the framework of the Stoic categories.<sup>33</sup>
5. *Ism* and *musammā* being so closely connected, some people believed them to be identical; this *al-ism huwa 'l-musammā*—theory will be dealt with in the chapter about **III** Mu'tazila.<sup>34</sup>
6. It would be possible to object against points 2 and 3 (*ism* and *musammā* always coexist) **III** there are some non-existing things which despite their non-existence are nevertheless called *afyā'*. In that case, the *ism* would precede its, as yet non-existent, *musammā*, and it would no longer be *maḥḥūd bi-waḥḥūdihi*. This argument may be refuted when we prove that the so-called non-existing things

nicht als Tatsache ist es Zeichen, sondern nur als ein im Gedanken bezogenes—so ist nicht die Tatsache ein Zeichen, sondern nur das auf das Zeichen gegründete Urteil zu henchten, und dieses ist ein Gegenwärtiges'. The same condition is **III** in the definition of *ism* by Ibn al-Arabi (Lum. 34, 9-10). **III** is **III** with the opinion that words are signs of the things (*zawāḥid* and **III** its converse). Cf. the following note and below, chapter IX. **III** relation between *ism* and **III** is also explained by al-Qubāḥī, ap. Af'ari, Maq. 390 and by 'Abd al-Qabbār, Muḥḥūd 4, 317; cf. Frank, 1967, 251.

<sup>32</sup> This reminds us of Plato, Crat. 384 D: 'It seems to me that whatever name one gives to somebody, that will be his right name, and if you then give him another name and call him no longer by the first one, then the second name will be no less true than the first one' (Hermogenes is speaking) (C. 405, cf. Anon. comment. on Aristotle de Interpret. 20, 18 [id. ad. omniaque mensuras]). The opposite opinion is found in those theological writings which defend the divine creation of the names, e.g. in Proklos (cf. Dunlavy, 1936, 426); everything has its proper name given to it by God; the same is asserted in the Arabic world, e.g. by Gāḥir ibn Hayyān (cf. Kraus, 1962, 2, 257-8). For the influence of the *Corymbus* on Arabic theories concerning the origin of speech, cf. below, chapter IX.

<sup>33</sup> Rescher, 1966, 69-70: (*šay'*). 70 (*maḥḥūd*); 80 (*hād*). According to Rescher, one could say about the notion *hād* that 'the circumstantial evidence points almost conclusively to a Stoic origin' (loc. cit. 80, n. 37). On *hād* also van den Bergh, 1954, 2, 4. *Šay'* is defined by the theologians and the philosophers as 'that about which something can be said, and which can be designated' (*šay' yafīḥu an yafīḥu 'alāhi wa-yafīḥu 'al-dalāli* 'alafā') (cf. Hwār. Maq. 22, 14; Af'ari, Maq. 161, 9-10; van den Bergh, 1954, 2, 4; 222). According to Rescher and van den Bergh the notion *šay'* is based on the Stoic *ti*, cf. below note 35.

<sup>34</sup> Cf. chapter VIII.

in reality do exist.<sup>35</sup> This proof is provided by a quotation from the Qur'ān,<sup>36</sup> and by a fictitious example.

7. After the excursion about the non-existent things we are brought back to the main argument. The adversary concludes that the

<sup>35</sup> Van den Bergh, 1954, 2, 62, n. 85.2. According to Stoic theory the highest genus of everything, corporeal or non-corporeal, existing or non-existent, is the *ti* (something) (cf. Rescher, 1966, 64-80; the quotations on page 78, note 31, from SVF are irrelevant, since they do not prove that the Stoics held anything like the aforementioned theory, we could refer to SVF 2, 117, 28-33 — Sextus, ep. 58, 15): 'The first genus seemed to some Stoics to be the "something", why this seemed so to them, I shall mention presently. In the universe, they say, there are things that exist, and things that do not exist. These non-existent things etc. nevertheless part of the universe as well, namely those things which occur in the mind, like Concepts and Ideas and anything else which, formed falsely by the imagination, starts to have a shape, though not a substance' (Primum genus Stoici quoddammodo videtur 'quid', quare autem non substantiam, in terra, aquam), videtur quoddam non, quoddam non non. Et hanc mentis, quare non sunt, terram natura complectitur, quare omnia substantiam, utrumque Crates, Diogenes et quicquid aliud falsa cogitatione formatum habere aliquam substantiam capiat, quoniam non habent substantiam), cf. also Jankes Magnien ap. Ding Lacey 7, 52 — SVF 2, 117. This theory on non-existent things formed part of the Mu'tazilite doctrine (Nader, 1956, 134-5, van Ess, 1966, 191-200, Brand, 1972, 29-40 'la positivité du néant'). According to several Mu'tazilites—among them 'Abd al-Ḥusayn Sulaimī, al-Jayyān (d. after 912/300), al-Qubāḥī, and Abū Ḥāshim—non-existing things are already things with their own essence and attributes. Allah can only provide them with the attribute of existence—*abla* in the act of creating. It would appear that Sūfī theory is at the root of this doctrine, rather than Aristotelian hylomorphism, where existence is preceded by the mere metaphysical possibility of future existence, not by a real essence (cf. Nader, 1956, 143-4 for a different opinion). Rescher does not provide any quotations for this theory outside the immediate reach of philosophy and logic. As we have seen, it could also be used to grammar, though doubtlessly with less profit than in Mu'tazilite theology.

<sup>36</sup> Qur'ān. 24: 39: '... like a mirage in the plain: the thirsty man thinks that it is water, then when he comes to it, he does not find a thing' (A 69). The example is traditional. Rāḥ (Maq. 14, 7-8) mentions the difficulties raised by Muḥḥūd ibn Gāḥir, a famous commentator on the Qur'ān (d. 722/104), cf. Seguin, 1967, 1, 29. Muḥḥūd found in this verse a contradiction between 'till he reaches it', which implies that it is something, and 'he finds out that it is nothing'. One proposal for a solution is to take *la šay'* in the sense of *la šay'* 'nothing useful', or to translate 'till he reaches the place of the clouds, and finds out that those clouds are nothing'. Zakkāḥī mentions this solution, and another one according to which mirages are actually sunrays that glitter on the sand (id. 57, 17-21). Another Qur'ānic example is mentioned by Rāḥ, Maq. 2, 64, 6-10. For Zakkāḥī's second example—that of a man we seem to recognize when we look at him from afar, but on approaching he turns out to be someone else—we refer to Sayyid (Maq. 27, 19 - 28, 11) and to Rāḥ (Maq. 1, 23, 21-4) where almost the same example is used, but another conclusion drawn from it, namely that meanings correlate with something in the mind, not with something in the outer world: when we imagine that we see someone we know, but on approaching him we have to change our opinion because he turns out to be someone else, the difference of the names which we have given to the object perceived by us does not prove that something non-existent was given a name, but it does prove, according to these authors, that names correlate with pictures in our mind (*ṣaww* *ghayy*), not with objects outside us.

argument about the precedence of the *asmā'* over their *muṣammayāt* has been invalidated, so that there is no way to prove the precedence of the *masdar* over the verb by means of this argument.

Zaḡḡāḡi's answer is that we are not discussing the possibility of proving the priority of either *asmā'* or *muṣammayāt* in a semantic theory (or rather: an epistemological theory), but in terms of grammatical facts. The proof of the priority of the *masdar* is, therefore, reduced to the proof of the priority of the noun, grammatically speaking. *Isn al-fi'* must be taken, not in the sense of *isn* vs. *muṣammā'*, but of 'grammatical noun vs. grammatical verb'. There is a consensus that nouns are superior to verbs.<sup>37</sup>

There is another interesting remark:<sup>38</sup> according to Zaḡḡāḡi the theory of the adversary does not even prove that *asmā'* and *muṣammayāt* are coexistent. Zaḡḡāḡi does not explain in which way one could refute this argument of the adversary, because his intentions are only grammatical. But there is a chance that he means the theory that there are *muḍarr'* without an *ism* — which would prove the posteriority of the *asmā'*.<sup>39</sup>

We are left with the question of the identity of the adversary. We have already demonstrated in our introduction that logico-grammatical discussions like the one under discussion here are characteristic of the grammarians in Baghdad during the fourth century. They tried to defend the old theories of the two schools with new logical arguments. In our passage we encounter a very fine example: the adversary defends the Kūfan theory, but we cannot possibly consider him as a real 'Kūfan'.<sup>40</sup> Perhaps he was Ibn Kaṣṣān, one of the teachers of Zaḡḡāḡi, who constantly switched between the two schools and often taught and defended Kūfan theories.<sup>41</sup> That he indeed held the Kūfan theory on this point of grammar is shown by his words in the commentary on Ibn al-Sikkī's *Tahdīb al-luḡa*: 'The *masdar* which belongs to *fa''ala* is *taf'il*; *fi'dī* also occurs, analogous to the expres-

sion *al-ḥaḡḡaḡa dīḡḡān* (I rolled it down), because *fa''ala* and *fa'lala* have the same pattern with regard to vowels and vowelless consonants, and their *masdars* are formed in the same way, because of the resemblance in pattern'.<sup>42</sup> These words presuppose the dependency of the *masdar* on the verb, in so far as the *masdar* is said to be formed from the pattern of the verb, i.e., is said to be secondary to the verb.

Philosophical terms are also used in support of the thesis that some parts of speech are prior to other parts. We must, says Zaḡḡāḡi, distinguish between various meanings of the term 'prior'.<sup>43</sup> He then gives the example of a body and its colour: colour is an accident and *ipso facto* posterior to the body in which it inheres, because the elimination of the accidents does not eliminate the body itself.<sup>44</sup> Accidents can only exist in a body; thus, colour only has existence in a body,<sup>45</sup> although it may be thought of as being independent of the body.<sup>46</sup> On the other hand, there does not exist a body without colour. Nevertheless, we can say that bodies are prior to their accidents, and in the same sense we can also say that, for instance, nouns are prior to verbs. They always coexist, yet the agent is always prior to his action.<sup>47</sup> Another example is the coexistence of the male and the female principle,<sup>48</sup> which does not prevent us from saying that the male principle is prior.

After the writings of Aristotle had been translated, the definitions of noun and verb became commonplace in philosophical literature.<sup>49</sup> Apparently there were also grammarians who felt themselves attracted

<sup>37</sup> b. Sikkī, *Tahdīb*, 366 r. (A 71).

<sup>38</sup> Compare with this the discussions in Greek logical literature concerning the various meanings of *posterior*. Aristotle, *cat.* 14 a 26 - 14 b 23; John Duns., chapters 7, 13; 60.

<sup>39</sup> Cf. e.g. John Duns., chapter 7, 2-3 = 13, 2-3; and below, note 38.

<sup>40</sup> Cf. e.g. John Duns. 43, (9-21), 52, 77-81; colour is in a body, and not the other way round, ib. 4, 24-6; Aristotle, *cat.* 1 a 28 'every colour is in a body' (*ἕκαστον χρομὸς ἐν σώματι*).

<sup>41</sup> Van den Bergh, 1954, 2, 307; Bethand, 1972, 34; 1973, 51-2. Al'arī, *Maq.* 392, 15-4; 569. Cf. Naḡḡān's theory on accidents (op. Al'arī, *Maq.*, p. 362), according to which we cannot perceive anything except the colours, which are the bodies; no body is without a colour. According to the Mu'tazilites, substances and accidents were inseparably linked, cf. Nader, 1956, 158-60.

<sup>42</sup> Cf. above, note 22.

<sup>43</sup> Except in the case of the Qur'anic account of the creation of Eve after Adam. This is the sort of reasoning we also find in the argument about the creation of speech: allowance is made for the Qur'anic account, but then, linguistic theory is developed independently, cf. below, chapter IX.

<sup>44</sup> On Aristotle's definitions: Strouhal, 1890<sup>3</sup>, 1, 238-44; 261-2. Laskin, 1971, 28-33.

<sup>37</sup> Cf. Zaḡḡāḡi, *id.*, ch. XI, pp. 83-4.

<sup>38</sup> *ib.* 58, 5-8.

<sup>39</sup> Rāzī, *Muf.* 1, 24, 2-4: 'It is impossible for all substances to be named by expressions, because the substances are infinite. What is infinite cannot be determined by analysis, and what cannot be determined by analysis is prevented from receiving a name' (A 70). Cf. Suy, *Muzh.* 1, 26 pen. - 27, 2 'Can every *ma'dā* have its *laf'*? On the infinity of things, cf. below, chapter VIII, note 73.

<sup>40</sup> But cf. above, note 29.

<sup>41</sup> Cf. Ibn Kaṣṣān, cf. above, chapter VI, note 66.

to these definitions, at least that is what transpires from Zāğāğī's remark quoted at the heading of this chapter about the Aristotelian definition. Zāğāğī himself tried to keep logic and grammar apart, but did not always succeed.

Aristotle defines the noun in the *Poetica*: 'A noun is a composite meaningful sound without time, no part of which is meaningful in itself',<sup>50</sup> and in the *De Interpretatione*: 'A noun is a conventional, meaningful sound without time, no part of which is meaningful when it is separated'.<sup>51</sup> The difference between the two definitions is explained by the different nature of the two texts: the *Poetica* deals with the various elements of speech, from the smallest (*sticheta*) to the largest (*lógos*); one of the relevant properties of the nouns in this context is that nouns are composed of smaller elements, hence the attribute 'composite'.<sup>52</sup> The *De Interpretatione* on the other hand, emphasizes the fact that both nouns and verbs are part of a larger whole, the sentence (*lógos*), so that their being composite is not relevant. The *Poetica* does not deal with the nature of words in speech, but rather with the nature of style and literature; speech is treated here as *lexis*, i.e., as speech from a stylistic point of view. In this context it is not relevant that nouns are the product of a convention. The *De Interpretatione*, however, is concerned with the logical structure of thought, which is influenced by the conventional nature of speech, hence the statement that nouns are conventional (*kata sunthikēn*). Both definitions have in common that the noun is defined as a meaningful sound, whose parts do not have an independent meaning. These two characteristics are shared by the verb, the difference between the two being that nouns do not indicate time, whereas verbs do.

The definition from the *Poetica* is found in Muṭṭā ibn Yūnus' translation:<sup>53</sup> the definition from the *De Interpretatione* is found in al-Fārābī's translation and commentary,<sup>54</sup> as well as in Gazzālī's

*Ma'yār*.<sup>55</sup> Gazzālī adds that this definition is 'according to the logicians' (*alā ṣarf al-manṣiqiyyīn*). An abbreviated form of it is given by Ḥwārizmī,<sup>56</sup> and by Ibn Ruṣd in his translation.<sup>57</sup> A still shorter form is found in Fārābī's *Kitāb al-alfāz al-musta'mala fi l-manṣiq*, which leaves out the entire second part of the definition, so that only the difference between the nouns and the verbs remains, not those properties they have in common.<sup>58</sup>

There are also a few additions in the Arabic translations of Aristotle's definitions. Fārābī, Ibn Ruṣd, Ḥwārizmī, and Gazzālī<sup>59</sup> add that nouns are single (*mufrad*) words. This marks the difference between them and phrases, which consist of more than one word, a difference which is also found in Aristotle's *Categoriae*: 'Some expressions are uttered with a combination of words, other expressions without such a combination. The composite expressions: for instance "man runs", "man conquers"; the single expressions: for instance "man", "cow", "runs", "conquers"'.<sup>60</sup> Besides, Gazzālī says that nouns are 'definite' (*muḥaṣṣa*),<sup>61</sup> perhaps a reminiscence of Aristotle's distinction between definite and indefinite (*adrista*) words.<sup>62</sup>

Zāğāğī's version of the definition—'a noun is an invented sound with a conventional meaning, not combined with time'<sup>63</sup>—is clearly based on the definition from the *De Interpretatione*, because he mentions the fact that nouns are conventional (*bi-l-ṭifāq*).<sup>64</sup> We must keep in mind that the *De Interpretatione* was already translated at an early time by Ishāq ibn Junayn, whereas the *Poetica* was translated only later by Muṭṭā ibn Yūnus.<sup>65</sup> The meaning of Zāğāğī's additional remark that words are invented (*maḥḍā*) is explained by Gazzālī's discussion about the invention (*waḍ'*) of names by parents for their

<sup>50</sup> Gazz. *Ma'yār*, 47, 11-12, almost identical with Ibn Sina's definition, *Itḥāṣa*, 7, 4-5 [A74].

<sup>51</sup> Ḥwā. *Ma'*, 145, 9-10 [A75].

<sup>52</sup> b. Ruṣd, *Šifā*, 236, 5-6 [A76].

<sup>53</sup> Far. *Alf.* 41, 13-4 [A77].

<sup>54</sup> In another version of the definition, *Ma'yār*, 42, 15-7.

<sup>55</sup> Aristot. *categ.* 1 a 16-9 [G43].

<sup>56</sup> Cf. Gazz., *Ma'yār*, 42, 15-7.

<sup>57</sup> Aristot. *de interpret.* 16 a 29-30: 'The expression "not-man" is not a noun, there does not even exist a name to denote it—for it is neither a sentence nor a negative judgment—, but let us call it an indefinite noun' [G44]. *Onoma adriston* is translated by Fārābī (*Šarf*, 32, 3) as *isim ḡam muḥaṣṣa*.

<sup>58</sup> Zāğ. *Alf.* 48, 10-1 [A78].

<sup>59</sup> The normal translation of *kata sunthikēn* is *bi-l-ṭifāq*. Cf. Louzel, 1963, 254-5 [23-4].

<sup>60</sup> Badawi, 1968, 76; 78.

<sup>50</sup> Aristot. *poet.* 1457 a 11-2 [G41]; on the linguistic chapter of the *Poetica*: Puglino, 1956; Scarpus, 1950; Morpurgo-Tagliabue, 1967.

<sup>51</sup> Aristot. *de interpret.* 16 a 19-20 [G42].

<sup>52</sup> We agree with Steinthal (1890<sup>1</sup>, I, 253) that Gießen's correction of *sunthikēn* (intelligible) into *sunthikēn* (composite) should be accepted, because the (original) form does not make sense. As an additional argument may be mentioned Ibn Ruṣd's translation (*Šifā*, 32, 10) which presupposes a Greek *sunthikēn*: cf. Fischer, 1964, 142-4 note.

<sup>53</sup> Badawi, 1953, 127, 12-3 [A72].

<sup>54</sup> Fārābī, *Šarf*, 29, 1-2 [A73].

children.<sup>66</sup> The Arabic term *waḥd*, just like its Greek parallel *rhēsis* indicates the human creation of a name.<sup>67</sup> This is in accordance with the conventional nature of the nouns, as held by Aristotle and by the Arabic logicians ■ his successors.

Zaḡḡālī mentions another variant of the Aristotelian definition of the noun—'a noun is an invented sound with a conventional meaning without time, whose parts do not participate in its meaning'<sup>68</sup>—which includes its second part (the constituent elements of a noun do ■ possess an independent meaning). We may compare with this ■ two versions of the same definition given by Fārābī in his commentary and in the *Kitāb al-uṣūl*. On the whole, we believe that ■ was Zaḡḡālī's primary source for the logical definitions, probably through Ibn al-Sarrāḡ, his pupil and Zaḡḡālī's teacher.<sup>69</sup>

There is still another version of the logical definition in grammatical literature, namely the one mentioned by Sīrāfī<sup>70</sup> and Ibn al-Anbārī.<sup>71</sup> This version is characterized by the term *iqirān* (combination, i.e. with time).<sup>72</sup> Another group of definitions stress ■ fact ■ nouns do ■ denote time, thus setting the nouns apart from the verbs, for instance Zaḡḡālī's definition.<sup>73</sup> These are related to Fārābī's second variant in the *Kitāb al-uṣūl*.

Arabic grammarians usually define ■ verb morphologically, i.e. they list those of its morphological properties that mark it as different from the noun and the particle.<sup>74</sup> Sometimes, they give a syntactic definition, which emphasizes ■ function of the verb as predicate of a sentence, itself unable to receive a predicate.<sup>75</sup> In the *De Interpretatione* Aristotle defines the verb as follows: 'A verb is (a word) which also indicates time (*prassēmaton*); none of its parts has a signification of its own. It is the sign of things which are predicated about some-

thing else'.<sup>76</sup> In the *Poetica* the predicative function of the verb is not mentioned: 'A ■ is a composite, meaningful sound with time, no part of which is meaningful ■ itself'.<sup>77</sup> We should not regard 'time' in this context as a morphological property, but as a property of the meaning signified by the verb. In the translations of the *De Interpretatione* definition by Ḥwārizmī and Fārābī, the term *prassēmaton* has been divided into two parts: the verb signifies some meaning (*dalla 'alā ma'nān*) and it also signifies the time of that meaning (*zaman bādā 'l-ma'nā*).<sup>78</sup> This is also found in the definition given by Gazzālī, who adds that the verb does not signify time in general, but the time of the meaning signified by it (this marks the difference between verb and temporal adverb).<sup>79</sup> In Zaḡḡālī's definition—'the verb is what signifies an event and a past or future time'<sup>80</sup>—we find the influence of the Aristotelian definition, though with a significant change: the term 'meaning' has been replaced by 'action' (*fi'āl*). The verb is now described as a word which signifies action and the time of that action. Perhaps this change was a reference to Sibawayhi, who wrote that verbs are the expression of 'the actions of the nouns' (*af'dā al-a'māl*).<sup>81</sup> This is also the case in the definitions given by Zamakhshari and by Rāzī.<sup>82</sup>

In Greek grammar the situation is as follows: Dionysios Thrax defines the verb according to its morphological properties: 'The verb is an undeclined word which can receive tenses, persons, and numbers, ■ which expresses an action (*energeia*) or a passion (*pathos*)'.<sup>83</sup> This definition ■ been imitated by other authors, including Apollonios Dyskolos. Apollonios adds, however, that morphological properties are not essential for the verb: the most characteristic feature of the verb is that it signifies an action (*pragma*). Only thus can we include

<sup>66</sup> Gazz. Asmī, 6, 11-4.

<sup>81</sup> Cf. above, chapter III A.

<sup>82</sup> Zam. Maṭ. 103, 6: 'The verb is what signifies the combination of an action with ■...' [A 89], quoted by Rāzī, Maṭ. I, 36, 11; cf. also Rāzī, Maṭ. I, 36, line 9 from below: 'The verb is a word which signifies the inhering of a member in an indefinite thing during a definite time' [A 90].

<sup>83</sup> Dion. Thr. 46, 4-5 [G 47].

the infinitive in our definition of the verb. The rest of the properties is accidental (*sumparhepomena*).<sup>84</sup> Probably, this emphasis on the *prōgma* as essential meaning of the verb in later Greek grammar is responsible for the replacement of *mānd* by *haday* in Arabic definitions of the verb in grammatical writing. It is significant that *mānd* retained its place in philosophical definitions.

Both in Greek and in Arabic grammar the need was felt to make a hierarchical classification of the parts of speech. As speech was considered the reflection of rational thought, which in its turn reflected rational order in the cosmos—this was commonly thought by all grammarians, whether they held *phūsei* or *thēsei*, *tawqif* or *isfīlāh*—one could not accept that each part of speech was to occupy the same place in hierarchy, and that it was to have the same rights as the other parts.<sup>85</sup> Apollonios Dyskolos justifies his search for hierarchy with the argument that once one accepts the hierarchical principle for the letters of the alphabet, one cannot agree with those who assume that the order of grammatical elements is determined entirely by accident.<sup>86</sup> This demonstrates the necessity for a grammarian to make rules for every part of grammar, and to explain every linguistic phenomenon. In this respect Greek and Arabic grammarians resembled each other very much.

When we analyse Apollonios' arguments for the priority of the noun, before the verb and the other parts of speech, together with the arguments found in the scholia on Dionysios Thrax and in other grammatical works,<sup>87</sup> we find that nouns are prior to verbs because:

1. nouns denote substances (*ousia*), verbs accidents (*sumbebēta*); substance is prior to accident.<sup>88</sup>

<sup>84</sup> Steinthal, 1891<sup>2</sup>, 1, 267 sqq.

<sup>85</sup> Apoll. Dysk. synt. pp. 15-6.

<sup>86</sup> The word *marabā* indicates the place a word occupies within the hierarchical system of Arabic grammar; originally it means 'step', 'rank', 'degree': it may also indicate the elevation that serves as a seat. In 'Abbasid society *marabā* (or *marbā*) means the place one occupies at a feast. A strict order was observed as to who had the right to occupy which place, so that *marabā* became the place (*manzila*) one occupies in the social hierarchy of high society. Cf. Sadan, 1973.

<sup>87</sup> In the following texts arguments are given for the priority of the nouns: 1. Apoll. Dysk. synt. 18, 5-8; 2. id. ib. 19, 24 sqq.; 3. scholia D.T., 71, 5-6; 4. ib. 216, 15-18; 5. ib. 244, 5-7; 6. ib. 358, 11 sqq.; 7. ib. 359, 21-3; 8. ib. 360, 13-4; 9. ib. 521, 11-13; 10. ib. 515, 15-8, 11. ib. 522, 21-33; 12. Choicob. 1, 105, 2 sqq.; 13. id. 2, 2, 22 sqq.; 14. id. 2, 3, 6 sqq.; 15. Sophr. 376, 4-377, 8; 16. (Ps.)Theodosios, ed. Gölling, p. 136; 17. Gregorios of Corinth, 4 + 7; 18. Arian in Aristot. de interpret. 102, 34 ed. Boer.

<sup>88</sup> In texts: 9, 10, 12, 13, 15.

2. nouns indicate the existence of things, verbs the actions and the vicissitudes of those things; the person who acts is always prior to his action.<sup>89</sup>
3. nouns and verbs have the same logical proportion as *gēnas* and *eidōs*: if the agent is abolished, the action is abolished as well, while the reverse is not true (*nanahairein*);<sup>90</sup> the action presupposes the agent, while the reverse is not true (*nanaispherein* = *nanoein*);<sup>91</sup> the action is performed by the agent, while the reverse is not true (*apotelein*).<sup>92</sup>
4. the word for 'noun', *ōnoma*, is also used for 'word' in general.<sup>93</sup>
5. noun and verb are the only essential parts of speech, since it is impossible to make a complete sentence without them. In certain cases, however, two nouns suffice to constitute a complete sentence, when the verb 'to be' is understood. A verb without a noun is always incomplete.<sup>94</sup>

From Arabic grammatical literature the following parallel passages may be quoted:

- ad 1. For this purely logical argument we have to turn to the logical writings about grammar, e.g. Rāzī: 'The noun is a word that signifies the essence, and the verb is a word that signifies the inhering in this essence of something at a certain time'.<sup>95</sup> Here the verb is defined as an accident of the essences signified by the nouns. Hebrew grammarians used the same argument.<sup>96</sup>
- ad 2. This is the main non-syntactic argument for the priority of the noun in grammatical literature. We find it for instance with Zakkāgi, who also uses it in his chapter on the priority of the

<sup>89</sup> In texts: 1, 4, 6, 8, 9, 10, 12, 11.

<sup>90</sup> For the meaning of this term: Aristot. top. 141 b 28; categ. 7 b 38, and cf. above, note 42.

<sup>91</sup> For these terms: Choicob. 2, 3, 15.

<sup>92</sup> In texts: 6, 9, 13, 15.

<sup>93</sup> In texts: 1, 6, 11.

<sup>94</sup> In text 17, of Donnet, 1967, 151-3 for further examples. We may compare with this argument a Stoic text, SVF 2, 181: 'The Stoics say that some meanings (*lekta*) are independent, and some are incomplete, incomplete are those meanings that have a disconnected form, e.g. *graptōi* (written), because we ask "who?"' [G48]. Some verbs do not have an expressed subject, namely verbs in the first and the second person, scholia D.T. 57, 12 sqq.

<sup>95</sup> Rāzī, *Maḥ.* 1, 111, 2 sqq. [A91].

<sup>96</sup> Cf. Kimhi, *Mikhlol*, p. 10 (transl.) and note 4.

masdar;<sup>97</sup> it is, moreover, the argument that underlies his definition of the noun.<sup>98</sup>

- ad 3. The comparison of the relation between noun and verb with the relation between *génos* and *eidos* is found, though not explicitly, in the argument of al-Kisā'i, al-Farrā', and Hišām: 'The noun is lighter than the verb, because the noun is included in the verb, whereas the verb is not included in the noun'.<sup>99</sup> We may also point to Rāzī's remark: 'It is impossible to use the verb without connecting it with the agent, ..., although we can use the expression for the agent without connecting it with the verb'.<sup>100</sup>
- ad 4. Although the term *ism* is used also for 'word' in general, the argument drawn from this use in Greek grammatical literature is not proposed, as far as we know, by any Arabic grammarian.
- ad 5. This argument is very important. Only nouns can form a complete sentence without the help of any other part of speech, but verbs cannot do this.<sup>101</sup> (The term used to translate the Greek term *autotelés* in this context is *muḥḍ*.<sup>102</sup>) Verbs, even in the first or the second person, always need a subject, which is in Arabic expressed by the suffix; this suffix is equivalent to a noun.<sup>103</sup> As for the verb in the third person, we never know who is its agent until the noun is mentioned.<sup>104</sup>

<sup>97</sup> Cf. above, chapter III C.

<sup>98</sup> Cf. above, chapter III A.

<sup>99</sup> Ap. Zaḡḡ. Id. 101, 1-4; the verb *ismān* in this quotation is equivalent to the Greek verb *sunēinphēron* [A92].

<sup>100</sup> Rāzī. Maḥ. 1, 111, 7-8 [A93], cf. the argument connected with *autototēleis*, above.

<sup>101</sup> Sib. Kl. 1, 6, 11-2; b. Gin. Hās. 1, 41, 13 sqq.; b. Arb. Inq. 103, 13 sqq.; III Asr. p. 9; Kāḍ. Maḥ. 1, 111, 2 sqq.; cf. Zaḡḡ. Id. 100, 3-5, where this argument is used in the discussion about the lightness of the nouns as compared with the heaviness of the verbs, cf. Gabelum, 1972, 31.

<sup>102</sup> Cf. above, chapter II.

<sup>103</sup> Cf. e.g. b. Gin. Hās. 3, 20, 10 sqq. for the verbal forms *qawm* and *qāwat*: the first form, 'I stood up', contains a pronoun with a phonetic expression, in the second form, 'he stood up', the pronoun is understood and does not have a phonetic expression. Pronouns are included in the category of the nouns, cf. above, chapter III A, note 93. The verbal forms in the first person were analysed differently in Greek grammar, cf. above, note 94.

<sup>104</sup> Cf. Zaḡḡ. Id. 100, 3-5 with text 17 (Gregorios).

There are two additional arguments:

1. Nouns only signify a nominatum, whereas verbs have to signify an agent, one or more objects, the masdar, the time and the place of the action, and the condition of the agent (*ḥāḍ*).<sup>105</sup> Nouns are, therefore, lighter than verbs, and thus, prior to them. The same fact is mentioned by (Ps.) Theodosios, but in order to defend the priority of the verb: 'The verb has even something more than the noun. The noun signifies only the thing (sc. the nominatum), but the verb signifies something more, e.g., *légo* (I say) indicates the action in itself, in this case (the action of) saying, but, moreover, it signifies the time ...'.<sup>106</sup>
2. The Baptists used still another argument, which was stated in terms of the syntactic ability to serve as the subject and/or the predicate of a sentence.<sup>107</sup>

Subject and nominal predicate, says Zaḡḡāḡī, are substances or accidents represented in speech by their names.<sup>108</sup> But we also define them as those words to which we may apply specifically nominal ideas (*ma'āni*), such as attributes, prohibitions, or vocatives. In other words, subject and predicate (*al-muḥḥar 'anhu wa-'l-muḥḥar bihi*) are terms which may stand for something in the outer world, or, in metalanguage, for those words which represent them (*al-ism an-na'ib 'an al-musanannā*), and which are characterized by the nominal ideas they may receive (*al-ma'āni allati ta'tawiruhā*). What is meant by 'nominal ideas'? In order to understand this we must consult the Greek data.

Protagoras the Sophist (5th century B.C.) was the first to speak about classes of sentences: he distinguished between four 'pillars of speech' (*pathmēnes légon*), viz., wish, question, answer, and command.<sup>109</sup> According to Koller this division was the result of his rhetorical studies,<sup>110</sup> and actually we find in Aristotle's writings that there is only one sort of sentence that can constitute the subject of logical studies: the simple true-or-false judgment (*apophasis*, Aussage). All other sorts of sentences such as command, wish, question, etc.,

<sup>105</sup> Rāzī. Maḥ. 1, 50, 15-6; I a'ab. Maḥ. pp. 266-7, Zaḡḡ. Id. 101, 1-2.

<sup>106</sup> On the notion *εὐρησθῆναι*: Pinborg, 1967, 30 sqq. The quotation is from (Ps.) Theodosios, ed. Götzling, p. 136; cf. Steinthal, 1891<sup>2</sup>, 2, 236 [G 49].

<sup>107</sup> Cf. above, chapter III A, note 62, III B, note 33.

<sup>108</sup> Zaḡḡ. Id. 42, 14 sqq.

<sup>109</sup> Cf. Rackmacker, 1951, p. 38, frg. 10.

<sup>110</sup> Koller. ■■■

belong to the art of rhetoric,<sup>111</sup> since they cannot be subjected to the test of truth or falseness.<sup>112</sup> This logical doctrine was then constantly repeated by the commentators, who mostly distinguished between five sorts of speech (judgment, command, wish, question, invocation)<sup>113</sup> On the other hand, we find that in grammar the Aristotelian classification turned into a genuinely grammatical one, and almost coincided with the division into grammatical moods: the 'wish' (optative), the 'command' an imperative, and so on.<sup>114</sup> Apollonios Dyskolos tells us of these moods (*enkliēseis*) that they are 'mental conditions' (*psuchikalai diathēseis*) with regard to the speaker or with regard to another person. Here we find expressed for the first time that the verbal mood is not only a verbal form, but that it is a verbal form which is connected with the state of mind of the acting subject.<sup>115</sup> This explains to a large degree why Zaḡḡāḡi distinguishes nouns (i.e., the representatives of acting bodies) with the 'nominal meanings/ideas'. The Stoics put the same Aristotelian division to another use, namely a division into ten sorts of speech, or rather, ten sorts of 'independent meanings' (*lekta autoneta*).<sup>116</sup>

<sup>111</sup> Aristotle also interprets: 17 u 1 sqq.: 'Not every (utterance) is categorical, but only when it contains truth or falseness, which is contained in every categorical utterance. A prayer is an utterance, but it is neither true nor false. All such utterances (that the categorical) must be left aside, because they belong rather to the study of rhetoric or literary theory, whereas the categorical utterances belong to the present study' [G51] Cf. Cornu, 1970, 74-5; 77-8.

<sup>112</sup> For the definition of the categorical utterance or sentence cf. above, chapter III C.

<sup>113</sup> *apophantikē, proaktikē, euktikē, erotemantikē, ekhērikē*, respectively, cf. Koller, 1936, 23. The number of five classes of sentences is also given by Ammonios, cf. below, note 118.

<sup>114</sup> Steinthal, 1891, 2, 272-91. The subjunctive constituted the main problem in the attempts to transform the Aristotelian division into a grammatical system. The same confusion of *enkliēseis* and classes of sentences was taken over by the Syriac grammarian Jacob of Edessa, cf. Marx, 1889, 249-50.

<sup>115</sup> Apoll. Dysk. synt. 44, 9-45, 1 (the question is why the infinitive does not possess person, number, or mood): 'It seems to me, therefore, that those who ascribe why the infinitive lacks person, number, mood, act absurdly, since it (sc. the infinitive) is not plural, every action being singular. Moreover, it does not possess a mental condition (*psuchikē diathēsis*), since it has no inflection to indicate the various persons, and only persons, being rational, can proclaim their own condition of mind. Thus, even the verb itself does not possess originally person and number. But when it is used about a person, then it must also distinguish between those persons, which are singular, dual, or plural, besides. Consequently, it (sc. the infinitive) cannot possess a mental condition, just as we have said before' [G51].

<sup>116</sup> These ten classes are enumerated by Sextus Empiricus, adv. math. 8, 78 = SVF 2, 187, and by Diogenes Laertius 7, 66 = SVF 2, 186; they are the classes of those *lekta* which produce an independent meaning (for the *lekta*: below, chapter III).

Returning to the Arabic world we notice in the first place the influence exercised by the commentaries on Aristotle's writings, for instance in Fārābī and Ibn Sīnā.<sup>117</sup> Fārābī reproduces almost exactly the five categories of the Peripatos: judgment about truth or falseness (*qawl ḡāṭi*), command (*amr*), question (*talb*), request (*taḍarruʿ*), invocation (*nidaʿ*). That Arabic scholars were still aware of the Greek doctrine, is also proved by a statement of the Ḥwān as-Ṣaʿīdī that according to some people there are six, according to others ten, sorts of sentence: this corresponds to a remark of Ammonios that the Peripatos recognized five, but the Stoics ten, sorts of sentence. We must take into account that Arabic authors usually distinguished between a negative command (*nahy*), and a positive one (*amr*).<sup>118</sup> The Brethren themselves recognized only: judgment, question, command, and prohibition, so that 'wish' and 'invocation' are missing.<sup>119</sup> These last two categories do figure in Ibn Ḥazm's list: judgment (*ḥabar*), wish or prayer (*duʿāʾ*), question (*istifhām*), command (*amr*); Ibn Ḥazm, however, does not distinguish between a positive and a negative command.<sup>120</sup> His term for the categories of sentences is 'elements of speech' (*awṣāf al-kalām*).<sup>121</sup>

As for Zaḡḡāḡi, his list—command (*amr*), prohibition (*nahy*), invocation (*nidaʿ*), attribute (*naʿi*)—is not intended to be exhaustive. We notice especially the absence of the category 'judgment', but perhaps the 'attribute' (*naʿi* = *ṭifaʾ*)<sup>122</sup> should be considered the equivalent of *ḥabar*—the term *ḥabar* is indeed used a few lines later in the sense of 'verb', 'verbal predicate'.

That the categories of sentences are called 'meanings/ideas' (*maʿāni*) which characterize the nouns, could be explained by the Stoic use of

<sup>117</sup> Far. Sarf. pp. 51-2; b. Šāh. ʿAbāra, 31, 8-13. In Syriac logic/grammar we find this division into five classes of sentences with Johannes bar Zaʿbī (13th/14th century); Marx, 1889, 163.

<sup>118</sup> Rasāʾil Ḥwān as-Ṣaʿīdī, 3, 119-20; cf. Ammonios' remark, SVF, 2, 189: '... so that he (sc. Aristotle) does not deal here with every utterance: not with the wish, nor with the command, nor with any other utterance, rather from the five according to the Peripatos, or from the ten according to the Stoics, but only with the categorical' [G52].

<sup>119</sup> Rasāʾil, 3, 119, pro: categorical speech (*ḥabar*), question (*istifhām*), command (*amr*), prohibition (*nahy*).

<sup>120</sup> b. Ḥazm, Rāʾi, 1, 265, 9-10.

<sup>121</sup> Amāḥdeh, 1956, 58, n. 1: 'Abd al-Gabbār (Mugnī, 7, 3, 8) uses the expression *awṣāf al-kalām* (sorts of speech; in this context it cannot mean 'parts of speech', cf. lb. 7, 50, 12 against *awṣāf*, e.g. *ḥabar*, *amr*, *nahy*). The term brings to mind the Greek *εἰδή τοῦ λόγου*.

<sup>122</sup> Cf. above, chapter III A. On *naʿi*: Diem, 1970, 315.

the word *lekra* in this context, and also by comparison with Apollonios Dyskolos' doctrine, inasmuch as the categories of the sentences represent a mental state of the acting subject; a command, a wish, etc., always presuppose an acting and thinking subject.

## CHAPTER EIGHT

### THE MUTAZILA

'Speech is made by a speaker, for he produces it, while before it did not exist; therefore, it is an action on his part'.<sup>1</sup>

According to Ibn al-Anbārī, Rummānī wrote about grammar and logic 'in a Mu'tazilite way' ('*al-madhhab al-mu'tazila*'),<sup>2</sup> which seems to imply that there existed some sort of Mu'tazilite tradition in grammar. There must have been a specifically Mu'tazilite method and style of writing. We would, of course, be wrong in calling every Mu'tazilite grammarian a professional logician. In this respect Fleisch is quite right when he says: 'Dans quelle mesure des grammairiens ont-ils reçu une formation philosophique, ceci n'a pas encore été précisé. D'al-Aḥḡas al-Awsaj (m. 830/215), disciple de Sibawaihi, al-Suyūṭī (Bugya, p. 158, l. 7) rapporte qu'il était mu'tazilite ... Mais l'indication n'est pas suffisante pour en faire un philosophe'.<sup>3</sup> On the other hand, it is more than likely that a grammarian who was at the same time Mu'tazilite, tended to write about language from a logical point of view, considering the data about the aforementioned grammarians. We can also refer to the Kūfan grammarian al-Farrā' (d. 822/207), who was a Mu'tazilite and at the same time was known for his fondness of using logical and philosophical terms in his writings.<sup>4</sup> Perhaps we can identify this Mu'tazilite method with that of the 'linguistic philosophers' (*falāsifat al-naḥwiyyīn*), a name which indicates those scholars who occupied themselves with the difference between logic and grammar. This group of grammarians must have been closely connected with al-Fārābī, who stands out as one of the principal sources for the knowledge of Greek logic among the Arabs.<sup>5</sup>

<sup>1</sup> Zaḡḡ 64, 43, 10-1 (A94).

<sup>2</sup> L. Aḡh. Nuzha, 189, 10-1; according to Nyberg (ET<sup>2</sup>, 790-1, s.v. Mu'tazila) the Mu'tazilites introduced the strictly grammatical method; he also notes the very close connection between them and the philological school of Baṣra.

<sup>3</sup> Fleisch, 1961, 25, n. 1.

<sup>4</sup> Soy. Bugya, 2, 333 sqq.

<sup>5</sup> Cf. above, chapter VII, note 6. That these Mu'tazilite grammarians may be treated as a group is also confirmed by the fact that there existed a special biography of the

As for the number of grammarians who belonged to the Mu'tazila, it must have been considerable. The following grammarians are said to have held Mu'tazilite views: Abū 'Amr ibn al-'Alā' (d. 770/154);<sup>8</sup> 'Isā ibn 'Umar (d. 766/149);<sup>9</sup> al-Ḥalīl (d. 791/175);<sup>10</sup> Sibawaihi (d. 793/177);<sup>11</sup> al-Aḥḥāḥ al-Awsat (d. 830/215);<sup>12</sup> al-Farrā' (d. 822/207);<sup>13</sup> Qurṭub (d. 821/206);<sup>14</sup> al-Māzinī (d. 863/249);<sup>15</sup> al-Mubarrad (d. 898/285);<sup>16</sup> al-Fārisī (d. 987/377);<sup>17</sup> Ibn Ginnī (d. 1002/392);<sup>18</sup> as-Sirāfi (d. 979/368);<sup>19</sup> ar-Rummānī (d. 994/384).<sup>20</sup> Doubtless, Zaggāḡ also belonged to the Mu'tazilite grammarians, as may be inferred from the *Iḥḥāḥ*.<sup>21</sup> Even if we allow for a certain unreliability of our sources, especially about the earlier grammarians, there still remains a respectable number of names mentioned in connection with the Mu'tazila.

We shall see in chapter IX that the Mu'tazila played an important part in the development of the theories about origin and nature of speech. Their preoccupation with this and similar subjects is partly due to their main dogma, the creation of the Qur'ān, partly the result of their interest in logic. We may say that this interest in logic led them to study the differences and the similarities between the two disciplines of logic and grammar—a very popular topic in the discussions of the 9th/3rd and the 10th/4th century, as we have seen above. Thanks to the Mu'tazila or to the Mu'tazilite grammarians, grammar became more preoccupied with the rationalization of gram-

<sup>21</sup> b. *Ans. Nuzḥa*, 189, 11; cf. above, chapter VI, note 11.

<sup>22</sup> This may be inferred from his words that speech is an act of the speaker and not created by Allāh (cf. Id. 43, 16-7) and from his opinion about the use and its purpose (cf. Id. 43, 11-2).

matical methods.<sup>22</sup> The attitude of many scholars towards logic and the logical element in grammar may be deduced from their views about the use of analogy (*qiyās*).<sup>23</sup> At first there was a strong opposition against the use of the 'causal analogy' (*qiyās al-'illa*), in which the conclusion arrived at by analogy follows necessarily and inevitably from the premisses.<sup>24</sup> For the orthodox this amounted to blasphemy, since it implied a restriction of the omnipotence of Allāh. The most outspoken on the subject were the Mu'tazilites who held the existence of causality in nature, that is: natural phenomena happen as the result of natural laws which have been instituted by Allāh. According to the orthodox theologians, things happen in nature because Allāh wishes them to happen. Applied to analogy this means that the conclusion of a reasoning is true not because of the validity of the logical principles concerned, but because of the will of Allāh, Who in this case permits the conclusion to be always, although He could change that truth if He wanted to.

In speech we find causality—at least according to the Mu'tazilite grammarians—in the theory about the 'determinants' (*amḥ*): the different endings of nouns and verbs in the declension are caused not by the *amḥ*, but by the speaking subject.<sup>25</sup> Grammarians distinguish between *amḥ laḥḥ* and *amḥ ma'nawī*, but according to Ibn Ginnī this does not imply that the words themselves, present or absent in the sentence, cause the endings: it only means that sometimes our action, which causes the endings, is accompanied by a visible sign, and sometimes it is not. Man himself is the real *amḥ*, not only in the declension, but also with regard to speech in general: hence the typically Mu'tazilite statement that speech is an act of the speaker. So we find in al-Gubbā'ī (d. 915/303), teacher of the theologian al-Aḥḥ and the grammarian as-Sirāfi: '(Allāh) utters the speech which He creates in a substrate. But real speech ... is articulated sounds and letters (i.e. consonants) in a certain order. The real speaker is he who

<sup>22</sup> We also point to Zaggāḡ's insistence that every statement about speech be proved rationally, cf. Id. 41, 16-42, 10.

<sup>23</sup> Brunschwig, 1970.

<sup>24</sup> Cf. above, chapter IV; Frank, 1966.

<sup>25</sup> *Maḥḥ*, 1958, 264-6; cf. b. *Qin. Ḥas.*, I, 109-10. Zaggāḡ does not say explicitly that man is the *amḥ* of the declension, as Ibn Ginnī says, but it seems to be evident from his remarks on the use of the declension and its introduction into speech that in his opinion *amḥ* provides words with the endings of the cases (Id. 69, 8-70, 2). This conforms to the Mu'tazilite doctrine on the human origin of speech, cf. below, chapter IX.

creates speech, and not he who is its substrate'.<sup>24</sup> Everything turns on the question what we intend by giving a person the attribute *mutakallim* (speaking). The connection between this question and the problem of the creation of the Qur'ān may be studied in the seventh book of 'Abd al-Gabbār's *Muḡnī fī abwāb at-tauḥīd wa-l-'adl*, which deals with the *Ḥalq al-Qur'ān*, especially in the chapter which is entitled 'On the fact that the real condition of the speaker is that he brings speech into being by himself, in accordance with his intention and his will'.<sup>25</sup> 'Abd al-Gabbār begins by reasoning with one of his characteristic grammatical arguments: according to grammatical rules the meaning of the expression *huwa mutakallim* (he is speaking) is *fa'ala 'l-kalām* (he made speech), just as we say *huwa dārib* (he is hitting), i.e. *fa'ala 'l-darb* (he made blows). The grammarians, however, are not competent to judge whether a person really creates his act, whether he is its *muḥallī* (creator, innovator): grammarians are not able to say anything about the theological implications of the verb *fa'ala*. But, leaving the grammatical facts for what they are worth, we may indeed conclude by way of logical reasoning that that person does create his act. Most certainly the grammarians would also reach this conclusion, if only they would use the [REDACTED] of logical reasoning. It follows that we must accept the literal text of the Qur'ān where it says that Allāh is speaking. We must conclude from this text that He is really speaking,<sup>26</sup> that He really makes His speech—which means that the Qur'ān is created. On the other hand, when [REDACTED] creates speech in a person, we cannot say that that person is speaking, by virtue of the creation of speech into him, because he does not really produce his speech himself. But when we are reciting the Qur'ān, it is our own action, and we ourselves are creating speech—this speech being an imitation of Allāh's words.<sup>27</sup> We may compare with this a quotation by Zaggāḡī: 'speech is made by a speaker, for he produces

it, while before it did not exist; therefore, it is an action on his part',<sup>28</sup> in other words, the speaker creates his speech.

We find the same linguistic reasoning in Ibn Ginnī in a polemic with Abū Ḥasan al-Aḥfās: 'Do you not see that each of us when he is speaking, only deserves that attribute (sc. the attribute "speaking") by virtue of his own speaking, not by virtue of something else, or by virtue of His creating speech in his instrument of articulation. He would not be speaking (sc. he would not deserve the attribute "speaking"), unless he moved his own articulatory organs'.<sup>29</sup> Returning to Zaggāḡī, we notice that he talks about this originally theological thesis, because it has been used by an adversary to attack the usual classification of the parts of speech. For, the adversary says, if every word is an action (*fīl*) on the part of the speaker, why then do the grammarians distinguish between *asmā'*, *af'āl* and *ḥurūf*? Zaggāḡī agrees with the theological thesis, but according to him, it cannot be used as an argument against the usual classification of the parts of speech because of the inequality of the two levels of the discussion: there is no real contradiction, since the terminology and classification of the parts of speech are based on grammatical facts and on the grammatical differences between the parts of speech. Exactly the same answer is given by 'Abd al-Gabbār to the objection that the grammarians' classification invalidates his definition of speech as consisting of 'letters in a certain order' (*ḥurūf manḥūma*). He answers: 'What is said by the experts of the Arabic language does not contradict what we said. When they say "speech is noun, verb, and particle with a meaning", they are talking about the speech as we have defined it; they divide it into different parts, without denying that speech in its totality consists of letters with a special arrangement'.<sup>30</sup>

The opposite opinion about the action of the speaker says that, on the contrary, every action belongs to Allāh alone. Who is the Creator of everything. This position was defended by Ibn Maḡā' of Córdoba (d. 1195/592): 'The doctrine of the people of the truth (i.e. the orthodox Zāhirites, like Ibn Ḥazm and himself) is that these sounds are only an action of Allāh the Lofty; their connection with man is the same as the connection of the rest of his voluntary actions with

<sup>24</sup> Ap. Sabraḥānī, *Muḥl*, I, 34, 13-7 [A95], cf. Bouman, 1959, 25; Frank, 1966, 24-5.

<sup>25</sup> 'Abd al-Gabbār, *Muḡnī*, V, 48 sqq [A96] *Mutakallim* is not used in the Qur'ān, but cf. e.g. 4/164; for the creation of the Qur'ān: Nader, 1956, 99-113.

<sup>26</sup> The same sort of reasoning with the Hanbalite Ibn al-Aqīl (about 1095-1100), who uses it in order to prove that Allāh really speaks with audible sounds (against the Aḥlīte doctrine), *Rasā'il*, pp. 22-3.

<sup>27</sup> On the recitation of the Qur'ān being an imitation of Allāh's words: Bouman, 1959, 15; 24; on the Aḥlīte point of view: b. 'Aqīl, *Rasā'il*, 22, 18-20: 'According to them (sc. the Aḥlītes), the recitation and the reading and the writing (sc. of the Qur'ān) are created. But the Qur'ān itself is an attribute which resides in the mind of the speaker, not perceptible to the senses of the believer, and the sounds and the letters are only an imitation of it' [A97].

<sup>29</sup> b. Ginnī, *Uṣūl*, 2, 454, 6-8 [A98].

<sup>30</sup> 'Abd al-Gabbār, *Muḡnī*, 7, 9, 4-6 [A99]; cf. b. 'Aqīl, *Rasā'il*, 9, 13 sqq.

him'.<sup>31</sup> A compromise between the two extremes was formulated by al-Aṣ'arī; this compromise was finally accepted by the majority of the orthodox theologians.<sup>32</sup>

The influence of the Mu'tazila is also discernible in the partly theological, partly grammatical debate about the question whether words are identical with their nominata (the things denoted by them), or with the act of inventing the words for the nominata, that is with the act of using the words. The first thesis was opposed by almost all grammarians according to Mu'tazilite doctrine, which held that words were identical with the act of using them. In the discussions about this subject, many difficulties arose from conflicting interpretations of the term *muṣawwad*. Zaggāgi makes clear<sup>33</sup> that nomen and nominatum cannot simply be put on a par: in the sentence *zaid qā'im* (Zaid is standing), the word *zaid* is not identical with the person, Zaid, whom it denotes, and the verb *qā'im* cannot be held to be identical with the action of that person,<sup>34</sup> because both words, *zaid* as well as *qā'im*, are actions of the speaker (*uṣūl al-mutakallim*).<sup>35</sup>

Ibn Ginnī proposes a grammatical proof of the distinction between *ism* and *muṣawwad*, which may be summarized as follows.<sup>36</sup> An adjunction (*ittifaq*) of a nomen to a nominatum is possible; they can, therefore, not be identical, since it is not allowed to connect something with itself.<sup>37</sup> When we look at the examples of such an adjunction of a nomen to a nominatum, it becomes clear what the meaning of *muṣawwad* in this context is: in the expression *ḥaḡḡ ḡā zaidin* the meaning is *ḥaḡḡ ḡāḡḡ ḡāḡḡ 'l-ism allagḡi huwa zaid* (he is the possessor of the name Zaid), or in other words *ḥaḡḡ huwa 'l-muṣawwad bi-ḡāḡḡ 'l-ism* (he is the person who is named by this name).<sup>38</sup> Another example is the common expression *kāna 'indana ḡāḡu ḡāḡāḡin* (he was with us on a certain morning); the meaning of this expression is *kāna 'indana 'l-waḡḡ al-muṣawwad ḡāḡāḡin* (he was with us at the time

which is called morning).<sup>39</sup> In these and similar examples the nominatum (*muṣawwad*) is that which is named by the nomen (*ism*), in other words, *ḡā*, *ḡāḡ* in the sentences quoted are the nominata of the nomina *zaid*, *ḡāḡḡ*.<sup>40</sup> This means that a word may be nomen or nominatum, depending on the use we make of it: if I ask someone 'what is the spelling of *ṣayf* (sword)', and he answers *s-y-f*, then we are talking about a nomen. But when I say 'I hit him with a *ṣayf*, with a sword', then I am talking about a *muṣawwad*.<sup>41</sup> In the first example, the nominatum of the word *ṣayf* is a nomen, in the second example it is a nominatum. As a matter of fact, we are dealing here with the distinction between the first and the second name-giving,<sup>42</sup> or, to put it in modern terms, between language and meta-language.

Ibn Ginnī also asks how it is possible that some people believe that nomina and their nominata are identical. His answer is that it is customary to use the nomina in talking about the nominata. In fact, the nomina are the only way to 'reach' the nominata. For this reason, some people thought that they could be used indiscriminately, and that, consequently, they were identical.<sup>43</sup>

A new element is brought into the discussion by Gazzālī, viz. denomination (*raṣṣya*).<sup>44</sup> According to Gazzālī we must distinguish between three elements: the nomen, its nominatum, and the act of giving a nominatum a nomen. As for the identity of the nomen and the nominatum, he mentions three theories. The first of these theories holds that all nomina are identical with their nominata. The second theory holds that this is nowhere the case. The third theory asserts that there are three sorts of nomina: those which are identical with their nominata (e.g. *Allāh*, *maḡḡud* (Allāh, existent)); those which are not identical with their nominata (e.g. *ḡāḡiq*, (creating), because this word is not only connected with Allāh, but also with the thing

<sup>31</sup> b. Muḡḡ. *Rawḡ*. 87 [A 100], cf. Maḡḡamī, 1958, 265 sqq.; Arnakdez, 1956, 89. Maḡḡarak, 1974<sup>2</sup>, 148-58; 'Id., 1973, 251-62.

<sup>39</sup> b. Ginnī. *Uḡḡ*. 3, 32, 1-3.

<sup>40</sup> Cf. *Id.* 57, 2-9: the verb is the *muṣawwad* of the noun, because the *muṣawwad* is called the *ism al-ḡāḡ*.

<sup>41</sup> b. Ginnī. *Uḡḡ*. 3, 31, 5-10.

<sup>42</sup> Cf. below, chapter IX, note 47.

<sup>43</sup> For the expression *al-ism ḡāḡḡ al-muḡḡā*, cf. Gazzālī. *Asnāḡ*, 6, 12: *al-maḡḡāḡ 'alāḡḡi* (= *al-muṣawwad*), and Zaḡḡ. *Id.* 50, 4 (*al-ism maḡḡāḡ 'alāḡḡi 'l-muṣawwad*). That we can reach the nominata only through the nomina is said by Zaḡḡḡḡ. *Id.* 56, 5-6, cf. below, note 75.

<sup>44</sup> Gazzālī. *Asnāḡ*, pp. 4 sqq. On Gazzālī's theories: Gāḡḡ, 1974.

created); and those about which neither the first nor the second property can be predicated (Allāh's inherent attributes).<sup>43</sup>

The word *Allāh*, which is used as an example of the words of the first category—those words which are identical with their nominata—is used also by 'Abd al-Gabbār.<sup>44</sup> He uses it to refute precisely the theory about the identity of nomen and nominatum. If the word *Allāh* were indeed identical with its nominatum, then it would be eternal—which is, of course, impossible in 'Abd al-Gabbār's theology.<sup>45</sup> Nor can the names of Allāh be identical with Allāh, because He is One, whereas His names are various and diverse.<sup>46</sup> On the other hand, the advocates of the identity of nomen and nominatum assert that precisely the eternity of the word *Allāh* is proof of the eternity of the Qur'ān—which can, therefore, not be a creation by Allāh. In Šahrastānī's *Milal* we find the statement that Allāh's attributes are identical with His essence, because there cannot be any plurality in His essence.<sup>47</sup>

The element of the *tasmiya* is also mentioned by al-Bāqillānī (d. 1013/404), who deals with the theory of the identity of the nomen and the nominatum in his *Tamhīd*.<sup>48</sup> The orthodox opinion, he says, is that nomen and nominatum are identical—which shows that the majority of the grammarians in Baghdad were not orthodox at the time, because they all agreed that the nomen is something else than the nominatum.<sup>49</sup> The Mu'tazila held, according to Bāqillānī, that the nomen is identical with the *tasmiya*, i.e. the namegiving. The same theory is also explicitly attributed to the Mu'tazila by Ibn Hāgib

<sup>43</sup> The same classification is used by Baḡdādī. Similar classifications in three categories (a, not-a, neither a nor not-a) in Stoic writings, e.g. in ethics the division of objects into good, bad, and indifferent (SVF 3, pp. 28–30; cf. Jadaux, 1968, 191; van den Bergh, 1954, 2, 117); also Posidonios' definition of dialectics as the science of truth, falsehood, and what is neither (SVF 2, 122); other connections, with Christian theology: van Ess, 1963, 119–20. On the doctrine of the attributes of Allāh: Pretzl, 1940; Alford, 1965; Frank, 1969.

<sup>44</sup> 'Abd al-Gabbār, *Muḡnī*, 7, 164, 10; 7, 165, 7.

<sup>45</sup> As is asserted by Gazzālī, *Asnā* 4, 7: 'as what we say (that Allāh—He is Lefty—is distant and existent' (*Ka-qaylūna Allāh ta'ālā sarrahu qāt wa-maḡhūb*)).

<sup>46</sup> Van den Bergh, 1954, 2, 128, note 219.2: according to Ibn Hāgib, Bāqillānī held that Allāh has only one name, but many appellations (*tasmiyāt*). For this distinction, cf. below, notes 57 and 70.

<sup>47</sup> Šahr. *Milal*, 34. Pretzl, 1940, 11.

<sup>48</sup> Bāq. *Tamh.*, 227–36; also *Id. Inṣāf*, 47.

<sup>49</sup> Which was to be expected in view of the fact that many grammarians belonged to the Mu'tazila. cf. above, notes 2 and 5.

(d. 1248/646) in his *Idhāh šarḥ al-mufaṣṣal*:<sup>51</sup> 'Some of them say that the *ism* is the *tasmiya*, and this is the doctrine of the Mu'tazila and of the grammarians and of many jurists. Others say that the *ism* is the *musammā*, and this is the Aḡarite opinion'. It is hard to explain why this theory is mentioned nowhere else in grammatical writings.<sup>52</sup> It is not clear what exactly is meant by *tasmiya*: one is tempted to interpret the Mu'tazilite theory of meaning in terms of 'use', i.e. meaning is the sum total of all concrete uses of a word, but probably this is too modern an interpretation.

It is not easy to understand what is meant by the word *musammā* in these discussions, since two different meanings of the word are being used at the same time. Gazzālī's theory of signification distinguishes between three modes of being:<sup>53</sup> a physical level, a psychological level, and a linguistic level; words correlate within this frame with concepts in the mind (*ṣunna dhihiyya*), not with objects in the outer world.<sup>54</sup> In that case, *musammā* is clearly the 'imaginary' correlate of the word, not the concrete thing denoted by the word. This is the meaning of *musammā* for Gazzālī as well as Ibn Ginnī.

On the other hand, 'Abd al-Gabbār uses in his refutation of the theory that *ism* and *musammā* are identical, arguments which are only comprehensible if by *musammā* we understand the concrete thing denoted by the word. The same meaning of *musammā* is used by the adversaries of Bāqillānī: they argue that if the nomen is identical with the nominatum, then by saying the word 'fire', we would burn our mouths, and by saying the word 'zaid', that individual would be present on our tongues. Here *musammā* means the concrete thing denoted by the word.<sup>55</sup> Bāqillānī's answer is: 'This is talk of the man

<sup>51</sup> *Iḥṣān al-ḥikma*, Iḡāḡ, p. 107, quoted by Šahrastānī, 1971, 215–6 [A 101].

<sup>52</sup> Cf. van Ess, 1963, 117–8.

<sup>53</sup> Cf. below, chapter IX, note 50; Gāḡe, 1974, 161, sqq. (Gazzālī's theory of identity and diversity as it is applied to the problem of the *ism* and the *musammā*: 168–75).

<sup>54</sup> *Qazz. Asnā*, 6, 10 sqq.: remark on the difference between the notions *waḡḡ*, *maḡḡlī*, and *maḡḡlī lāḡlā*.

<sup>55</sup> We are reminded of the Stoic paradox of the wagon (whatever you say passes through your mouth; you say 'wagon'; therefore, a wagon passes through your mouth), cf. Rijk, 1968, 98–9. That the argument may also be used the other way round, may be seen in a completely different context, namely in the controversy in Indian grammar concerning the natural relationship between a word and its meaning. It is there argued by the adherents of the Vaiśeṣika school that words do not co-exist with the objects they denote: the word 'fire' does not burn the mouth, and the word 'razor' does not cut it; nor does the word 'honey' sweeten it (cf. Kuṇḍanand Naja, 1969<sup>2</sup>, 22).

in the street, and typical of ignorant people, because the words "fire", "zaid", which are present in our mouths, are not the name of Zaid, nor the name of the fire, but only a denomination (*tasmiya*), and an indication of those names. Their argument does, therefore, not apply.<sup>37</sup> In other words, *ism* is a sort of idea which is inherent in the objects and which is identical with them, whereas the sounds of the physical word are an indication (*dalāla*) of those *asmā'*. We do not doubt that this argument of Bāqillāni's adversaries is one of the arguments used by the Mu'tazila. We may compare with it 'Abd al-Ġabbār's argument that, if *ism* and *musammā'* were identical, the word *Allāh* would then be eternal.

The difficulties concerning the meaning of *musammā'* are also mentioned by Baidāwī (d. 1286/685) in his commentary on the *Fātiḥa*.<sup>38</sup> He says that the thesis of the identity of nomen and nominatum may be accepted with a certain reserve. If by *ism* we understand the physical words (*al-faṣṣa*), there can be no question of an identity with the *musammayāt*, i.e. with the concrete things denoted by the words, because in that case the two notions are incomparable, they are not on the same level. If, however, by *ism* we understand 'the essence of the thing' (*ghār al-ṣay'*)—a meaning which does not appear normally—then it is identical with the *musammā'*. A third possibility is that we understand by *ism* an attribute of Allāh (e.g. in the Qur'anic text *sabbih ism rabbika* (worship the name of thy Lord)<sup>39</sup>). In that case, we must distinguish between essential attributes, which indicate the essence of the thing (*naṣṣ al-ṣay'*), non-essential attributes, and in the third place, indifferent attributes, i.e. those about which neither of the two things can be predicated.<sup>40</sup> Apparently, there can be only identity of *ism* and *musammā'* in the case of attributes of the first category (al-Aṣ'ari, according to Baidāwī<sup>41</sup>).

<sup>37</sup> Bāq. *Tamh.* 232, 124 (A 102).

<sup>38</sup> Baid. *Tafsīr*, 4, 7-14; cf. also al-Ash'ari, *Sharḥ al-ta'wīl 'alā 'l-ḥudūd*, 1, 7, quoted by Shtrombā'el, 1971, 215-6.

<sup>39</sup> Qur'an, 87/1.

<sup>40</sup> This classification of the attributes reminds us of Gazzālī, cf. above note 45; cf. Gāṭi, 1974, 155-8; 175-7.

<sup>41</sup> According to Baḡdādī, Uṣūl, 114 (d. 1037/429), quoted by Pretzl, 1940, 20, Aṣ'ari defended the orthodox thesis of the identity of name and thing named in his book on the explanation of the Qur'an, but in his book on the attributes of Allāh, he divided the names of Allāh according to His properties. Cf. Aṣ'ari's discussion concerning the names of Allāh, *Ibānu*, p. 24, namely the problem whether they are created or not. He there concludes from the Qur'anic text *tabārak ism rabbika*—that these names cannot be created, and are, therefore, identical with His essence. But Sabraṭīnī, *Mīḥal*, 34,

Rāzī's account<sup>42</sup> completes the picture. His method resembles the method used by Gazzālī, in so far as he also includes the notion of *tasmiya* in his discussion. He even mentions the fact that the identity of *ism* and *tasmiya* was proclaimed by the Mu'tazila (and he refutes this thesis<sup>43</sup>). We believe that, on the whole, Rāzī's discussion served as a model for Baidāwī. Rāzī says that the theory of the identity of *ism* and *musammā'* was chosen by the Aṣ'arites.<sup>44</sup> Apparently it is rejected by the Mu'tazilites, because that school had a theory of their own, which held that the *ism* is identical with the *tasmiya*. We have seen above that both Ibn Ġinnī and 'Abd al-Ġabbār rejected the identity of nomen and nominatum; both were of Mu'tazilite confession. Rāzī admits, furthermore, that, if we use *ism* in the sense of 'essence of the thing' (*ghār al-ṣay'*), it is indeed identical with the *musammā'*, although in that case the whole theory is a mere tautology (*iqdāḥ al-wāḍiḥ*). The arguments used by the advocates of the theory are various, he says, the most important ones being the text of the Qur'an (*tabārak ism rabbika*, cf. the above cited *sabbih ism rabbika*), and another argument connected with the formula of divorce.<sup>45</sup>

The names of only a few authors are mentioned in connection with this theory. Of the grammarians we have found only the name of Abū 'Ubaida (d. 825/210), the teacher of al-Māzinī.<sup>46</sup> We are told that one of the arguments he used was the text of the Qur'an (*sabbih ism rabbika*). From the same source we hear that Sibawaihi opposed the theory.<sup>47</sup> It is small wonder that the majority of the grammarians did not favour the theory of the identity of nomen and nominatum, because the number of Mu'tazilites among them was considerable. As we have seen, the Mu'tazila rejected this theory.

cf. Pretzl, 1940, 17, tells us that Aṣ'ari affirmed that in Allāh all opposites are destroyed, which implies that it cannot be predicated about His attributes that they are identical with Him, nor that they are not identical with Him (*coincidentia oppositorum*), cf. van den Bergh, 1954, 2, 128, note 219.1.

<sup>42</sup> Rāzī, *Maṭ.* 1, 108-10. Cf. also Anawati, 1974, 363-6, concerning Rāzī's discussion of the various arguments for or against this theory in his *Laws of al-ḥayyūṣūf 'l-ḥusnā* we-'a-ṣṣif (ed. Cairo, 1914, pp. 3-10).

<sup>43</sup> Rāzī, *Maṭ.* 1, 110, 2-4 nqq.

<sup>44</sup> Cf. above, note 52.

<sup>45</sup> Rāzī, *Maṭ.* 1, 110.

<sup>46</sup> *Liṣān*, s.v. *ḥ - m - n*, 14, 402, 7-11 r.; on the authority of Abū 'l-Abbās, i.e. al-Muḥarrir, a pupil of Māzinī's. Cf. Abū 'Ubaida, *Maṣṣir al-Qur'ān*, ed. M. F. Sezgin, Qahirā, 1954, 1, 16, 8.

<sup>47</sup> *Liṣān*, ib. 402, 1. This is indirectly confirmed by the fact that the question, *Id.* 11, 8 is put to the followers of Sibawaihi, but probably, Sibawaihi himself was too early for this discussion.

Originally, the problem was a theological one with rather grave consequences for the idea of one God: if we accept the identity of nomen and nominatum, then we must also accept the eternity of the words, which in the case of Allāh contradicts the Mu'tazilite doctrine.<sup>68</sup> The Mu'tazila therefore opposed the theory in the first place. Their argument was the incompatibility of the unity of Allāh with eternal and different names.<sup>69</sup> The grammarians among the Mu'tazilites adduced grammatical arguments to prove the impossibility of the theory, as in the case of Ibn Ġinnī. The theory favoured by the Mu'tazila was the identity of *ism* and *tasmiya*, but we find Ibn Kulāib (d. 845/240) making an effort to distinguish between the two notions. He distinguished between 'the natural-conventional name which is given to something in a particular language, which is its denomination (*tasmiya*)' and 'the thing's necessary and universal meaning = intelligible idea, which is its true name (*ism*)'.<sup>70</sup>

No arguments of a grammatical nature are found in favour of the theory of the identity of *ism* and *tasmiya*: the only grammarian whose name is connected with it, Abū 'Ubaida, apparently restricted himself to theological arguments. Zaggāgī lived at a time when the problem had ceased to be a controversial issue for grammarians, and he mentions it rather as a sort of commonplace objection, which does not need to be refuted, since everyone knows it is based on an incorrect theory. It is important to keep in mind that the original issue was the identity of words and the objects denoted by them. Only later did the problem, which was originally a theological one, change into a semantic one, namely the identity of words with their meanings. This change was partly caused by the need to find new, grammatical arguments against the old theory.

There is perhaps a parallel between the original problem and the Aristotelian theory that thought and the object of thought are identical

<sup>68</sup> Cf. the orthodox statement in Bagdādī, *Usūl*, 114: if names were really different from the things named, then Allāh would not possess names and attributes from eternity. Pretzl, 1940, 20.

<sup>69</sup> Concerning the nature of the discussion, which was rather primitive, cf. Pretzl, 1940, 20: 'Diesem Problem stehen alle *Wurakallisten* aus Mangel an dialektischer Schulung doch sehr hilflos gegenüber. "Gleichsein" oder "Verschiedensein" und die eldzigen viel zu grobkörnigen Denkmittel, mit denen sie um die Sache herumtuten.'

<sup>70</sup> Cf. Mubūdī, 1970, 39; this theory was advanced by the grammarian Šarīf in his discussion with Muṭā ibn Yūsuf (cf. above, chapter VII). For the doctrine of Ibn Kulāib: Bouman, 1959, 37-8, van Ess, 1965. Ibn Kulāib was not a Mu'tazilite, but an independent thinker. In some respects his doctrine is reported to approximate that of the Christians, cf. Nader, 1956, 99, note; Sezgin, 1967, I, 999.

—except when we conceive of thought as an act—: if this identity would not exist, we could only have an impression of the truth, never truth itself, because our thought would in that case be different from the truth.<sup>71</sup> This theory is also dealt with by Plotinos and by Alexandros in his commentary on Aristotle's *De Anima*.<sup>72</sup>

Aristotle even mentions that nomen and nominatum may be confused, in approximately the same terms as Zaggāgī: 'As we cannot reproduce the objects themselves in speaking, we use words instead of the objects as symbols. Consequently, we tend to believe that what applies to the words also applies to the objects, just like the numbers in arithmetic. But there is a difference: words are finite, as is the number of sentences. But the objects are infinite. Thus, the same sentence and the same word must needs signify more than one thing'.<sup>73</sup> Augustinus discusses the same problem as follows: 'As we are not able to speak about words unless with words, and as we speak, when we speak, only about things, it may occur to us that words are signs of things without ceasing to be things themselves'.<sup>74</sup> There is a striking resemblance with Zaggāgī's words: 'The term "nouns" can take the place of the term "what is named by the nouns" when something is told about them (*fi 'l-ihbār 'anḥā*), for you can only get hold of (the nominata) through (the nouns), as we have mentioned'.<sup>75</sup>

<sup>71</sup> Van den Bergh, 1954, 2, 120, note 201.2; Islamic philosophy, 1972, 29.

<sup>72</sup> Cf. Plot. Enn. 3, 2, 5; Alexandros of Aphrodisias, comment. in Aristum de anima, (Arabic translation), Bagdādī, 1971, 34.5. Cf. also Proklos, scholia in Plat. Crat. 6, 3-9.

<sup>73</sup> Aristotle, *toph. el.* 165 a 2.11 [G 53], cf. Surinhal, 1890<sup>2</sup>, I, 190-1; Conerly, 1970, 70, 79-80. On the Arabic translations of the *Sophistici Elenchi*: Bagdādī, 1968, 77. The infinity of things as compared with the finiteness of words: Say. Muzh. I, 26 per. 1-27, 2, Rārī. Ma' 1, 24, 2-4; above, chapter VII, note 39. In literary theory the argument of the infinity of things is used in the discussion concerning *istisak*, the use of one expression for more than one concept. Words are formed from finite letters, and are, therefore, finite; they are used to express an infinite number of things; therefore, *istisak* exists by necessity. This argument is used by Šalīb ad-Dīb. Muṭā ibn Aybak al-Šalībī (d. 1188/588), cf. Brockelmann, *QAL* II, 31; S II, 27. In his *Faṣṣḥ al-ḥitām 'an al-nawā'ir wa-'l-ḥitām* according to Bonebakker, 1966, 89. In another context the infinity of the *ma'āni* as compared with the finiteness of the *alḥāz* is used as an argument for the superiority of the artist, who has to select the right word for a meaning; cf. Heliopolis, 1969, 70-1.

<sup>74</sup> August. *diuol.* c. 5; 8, 1-3 ... *nam cum de rebus loquar nisi verba sequamur et cum loquamur nomen de aliquibus rebus loquamur, occurrit animus ita exar verba signa rerum, et res earum designant.* Cf. Barwick, 1957, 11.

<sup>75</sup> Zaggāgī, *Id.* 56, 5-6 [A 103].

## CHAPTER NINE

## THE ORIGIN OF SPEECH

'... and particularly the theory of names happens to be a rather complicated problem'.<sup>1</sup>

It is a wellknown fact that Islamic theology had an enormous influence on the linguistic studies of the Arabs,<sup>2</sup> and considering the number of grammarians with Mu'tazilite views, we ~~cannot~~ but expect that the Mu'tazila, too, exercised some influence in this field. We can detect the Mu'tazilite influence particularly in the ideas about the nature and origin of speech. Although we do not believe in a Mu'tazilite 'liberal humanism', we do believe that their preference for logical, i.e. Greek methods, and for rational thinking, led them to a ~~new~~ anthropocentric conception of speech. On the other hand, it is certainly wrong simply to deduce from the Mu'tazilite doctrine of the ~~creation~~ of the Qur'ān by Allāh that the Mu'tazila considered speech a ~~divine~~ invention:<sup>3</sup> it is very well possible to conceive of a doctrine which contains both the creation of the Qur'ān and of speech by Allāh, without diminishing man's free will. Nevertheless, ~~our~~ sources indicate that the combination of Mu'tazilite ideas and a conventionalist theory about the origin of speech was fairly common, though there are exceptions, as is proved by the case of Abū 'Alī al-Fārīsī.<sup>4</sup> Moreover, we find that it is possible to deny the creation of the Qur'ān by Allāh and at the same time to believe in the human origin of speech.<sup>5</sup> In short, the conventionalist theory is neither a necessary nor an exclusive condition for Mu'tazilites.

As a matter of fact, it is impossible to understand properly the ideas of the Arabic grammarians and theologians with regard ~~to~~ the

origin and nature of speech without comparing them with the data from Greek grammar and philosophy. It is important to keep in mind that the history of this problem is a complicated one because of the constant change in meaning of the terms used in the discussions about this problem. We shall see that several terms have been borrowed from Greek discussions by Arabic grammarians, even when the framework of these discussions was completely different from the Arabic point of view. In connection with this, we refer to Steinthal's methodologically important observation: 'Solche Schlagwörter ändern, ..., mit der Zeit und mit den Vertretern und mit der gegenseitigen Stellung der Parteien ihre Bedeutung; die Geschichte der Parteien, ~~die~~ Entwicklung ihrer Kämpfe, liegt gerade in der veränderten Bedeutung der oft unverändert gebliebenen Namen'.<sup>6</sup> The two words most frequently used in these discussions, *physis* and *thesis* were not meant originally to indicate the origin of speech, but the epistemological value of speech, i.e. the possibility to understand the nature of the things through the words which signify them. Speech is *physis* when it gives us an insight into the nature of things, when the form of the words tells us something about the nature of things; speech is *thesis* when it contains only words which have been chosen or agreed upon arbitrarily and independently of the things they signify. In both cases, the origin of speech remains an open question: in both theories, it may be due to a divine or a human name-giver, to nature, or to the community. In later times, the terms *physis* and *thesis* were also used in the discussions about the origin of speech, whence the ambiguity and the pointlessness of some of these discussions. This fact was already known in antiquity, for instance by Proklos in his commentary on Plato's *Cratylus*,<sup>7</sup> and by Ammonios in his commentary on Aristotle's *De Interpretatione*.<sup>8</sup> According to these sources, the word *physis* has several meanings.<sup>9</sup> Kratylos uses it in Plato's dialogue of

<sup>1</sup> Steinthal, 1890<sup>2</sup>, I, 73.

<sup>2</sup> We do not agree with Steinthal, when he says that Proklos 'nicht völlig unfähig (zeigt) einen gewissen Bericht über alte Philosopheme zu geben'. (1890<sup>2</sup>, I, 170) On the whole, the remarks of Proklos (and Ammonios) bear witness to a keen insight into the different meanings of the key-words. What is true, though, is that he tends to over-systematize and to project new opinions back into older writings. On Proklos: Durlinger 1976.

<sup>3</sup> Amm. in Aristot. de interpret. 34-5, ed. Busse.

<sup>4</sup> For the four meanings of *physis*: Prokl. comm. in Plat. Crat. par. 37 '... because the term "by nature" (*physis*) has four meanings: it may be used to indicate living beings, animals, or plants, as a whole or in part; it may be used to indicate their

<sup>1</sup> Plato, Crat. 384 B-385d.

<sup>2</sup> Cf. e.g. Kopf, 1956; Weiss, 1966: 1974.

<sup>3</sup> Contra Loucel, 1963, 275 (44): 'Mais que restait-il du Mu'tazilisme si la langue est considérée comme révélée par Dieu? En quoi le libre arbitre humain pourra-t-il désormais s'exercer? ...'; for the Mu'tazilite theory: Nader, 1956, 255-7.

<sup>4</sup> The astonishment of Loucel (1963, 275 (44)) and Kopf (1956, 57) at this fact does not seem to be justified.

<sup>5</sup> Contra Loucel, 1963, 199 (12): 'Qui affirme que le Coran est créé peut difficilement soutenir l'origine humaine du langage'.

the same name to indicate that things receive their names according to their nature, and that therefore these names indicate those things naturally, i.e., in a natural way, so that the sounds of the word imitate the nature of the thing.<sup>10</sup> But speech may also be said to be *phûsai* because it is made up of something natural, something physical, viz. sounds.<sup>11</sup> Epikouros and Lucretius use the term in still another sense: words originate in a natural way; just as animals make natural sounds, man began to use natural sounds in order to indicate things, though arbitrarily.<sup>12</sup> The opposite of *phûsai* is the term *thêsis*: some people mean by this that words signify things as the result of an arbitrary agreement between the first men,<sup>13</sup> whereas others understand by *thêsis* the action of a wise name-giver, who understood the nature of things and expressed it in appropriate words.

The doctrine of the Stoics constituted as it were a compromise between the various theories; it came to be accepted by the majority of the grammarians, and so found its way into the schools.<sup>14</sup> We believe that the Stoic theory was one of the major ones of the

potential or actual properties, for instance the lightness and the warmth of fire, it may be used to indicate the shadows and the images in a mirror; or it may be used to indicate a picture made by an artist, which resembles its model ...' [G 55]. According to him, Kratylos used *phûsai* in the second meaning, Epikouros in the first; cf. Steinhilber, 1891f, I, 168-32 and note 11 and 12 below.

<sup>10</sup> 'Kratylos speaks the truth when he says that a thing has a name according to its nature (*phûsai*), and that not everybody is able to be a maker of names, but only he who takes into regard the natural name of everything, and who is able to express its essence in letters and syllables', Plot., *Crat.* 390 D-E [G 56]. For the interpretation of the *Cratylus* I refer to the fundamental work of Derholav, 1972, which gives an almost exhaustive survey of older interpretations and literature.

<sup>11</sup> Cf. Alexandros of Aphrodisias ap. Amon in *Aristot. de Interpret.* 39, 14-7, ed. Boese: '... the syllogism presented by the commentator from Aphrodisias (sc. Alexandros), which seems to prove that nouns and verbs are only natural (*phûsai*): for nouns, he says, and verbs are sounds, and sounds are natural; therefore, nouns and verbs are natural' [G 57]. Cf. the Arabic translation of Alexandros' treatise on sound, Badawī 1971, 31.

<sup>12</sup> For the Epicurean analysis of language: Dug. Laert. 10, 75 sqq.; Lucr. *De Rer. Nat.* 5, 1019 sqq. and Ernout/Robin's commentary at *Lucr.* (Paris, 1962, 3, 138 sqq.); de Lacy, 1929; Schrijvers, 1974. Epikouros' doctrine is a good example of the confusion in the terminology: words are natural (*phûsai*), but they are conventional as the same time - which is mostly a statement characteristic of the *thêsis*-theories!

<sup>13</sup> In that case, it is synonymous with *nomothêsis*, or if the emphasis lies on the traditionality of speech with *nomoi. êthêi*.

<sup>14</sup> Maiborg, 1961, 125-6: 'Die am meisten verbreitete Auffassung der Antike war die der Stoa, die auch von den Rhetorschulen mit wenigen Korrekturen angenommen worden ist, und so Zugang zur Allgemeinbildung fand'.

Arabic theories, not least because of the great influence of the schools of rhetoric on cultural life in the Hellenistic countries.<sup>15</sup>

Traditionally we are told about the Stoic doctrine that, with regard to the nature of language, it held that speech is *phûsai*,<sup>16</sup> that there is a connection between the sounds of speech and the nature of the things signified by those sounds. It is true that the Stoics believed that in the first phase of the creation of speech, or rather, in the first creative activity of man in this field, the 'first sounds' (*prôtai phûnai*)<sup>17</sup> showed a correlation between the essence of things and the form of the words. This correlation is proved by Chrysippos with the form of some of the personal pronouns.<sup>18</sup> But after this first period of creativity, speech follows its own course and its own laws, thereby losing contact with the *realia* which are designated by the words. This is the period of the development of grammatical rules, but also the period of the denominative formations, which are irregular, i.e., which cannot be classified by rules. This distinction between two periods is important for the establishment of the value of words with regard to the essence of the things designated by them: in the first period, which is ruled by nature (*natura*), words express the essence of the things, but in the second period everything is ruled by grammar (*ars*) and speech becomes a traditional, conventional way of speaking (*usus*). Consequently, words lose their ability to express the essence of the things designated by them, and they change constantly. In order to rediscover the original words (the *ênuma* which express the true essence of the things), the Stoa used certain etymological principles of a phonetic and semantic nature;<sup>19</sup> they even thought that with these

<sup>15</sup> Dübner, 1968, 93 sqq. The schools of rhetoric in general: Martini, 1965.

<sup>16</sup> Origenes, *Contra Celsum*, I, c. 24 = SVF 2, 146: 'The theory about the nature of the words, whether they are *thêsei*, as Aristotle thinks, or, as is held by the people of the Stoa, *phûsai*, in so far as the first sounds imitate the things designated by the words. They also use certain etymological principles in this matter' [G 58].

<sup>17</sup> They are identical with Augustinus' *numera verborum*, dialect VI, 10, 9; 11, 13 (= *origo*) of Barock, 1957, 29-33.

<sup>18</sup> Cf. SVF 2, 895 = a quotation by Galenos from Chrysippos' *Peri pînchêi*: 'For we pronounce the word *egô* (I) by pulling down our lower lip at the first syllable, thus indicating ourselves (pointing at ourselves), following this pointing gesture the movement of the chin and the nod towards the breast comes the next syllable. (The word *egô*) does not point at anything outside us, such as in the case with the word *ekêbrôu* (he) [G 59]; cf. Schmidt, 1839, 23-5. In Latin grammatical literature, this example has been taken over by Publilius Nigidius, who contrasts *ape* and *per* the same way Chrysippos does with *egô* and *ekêbrôu*, cf. de Rijl, 1968, 92-3.

<sup>19</sup> For the four categories of phonetic change (*adfectio*, *permutatio*, *transmutatio*, *derivatio*): cf. above chapter II. The semantic principles operate with the categories of

principles every word could be explained.<sup>20</sup> The Stoic etymological principles soon became common property of Greek grammatical literature, and they are used in Arabic grammar as well. Suyūṭī ʿEtymology as follows: 'Etymology means deriving one form from another, where both forms agree in meaning and original content and the combination of consonants, so that the second form signifies the original meaning with a significant addition (in meaning), which is why they differ phonetically or morphologically ...'<sup>21</sup> Here we see an echo of the Stoic doctrine: the change from original word to secondary word is irregular, but may be explained through a correlation between the change in meaning and the change in form. There are in fact two layers of speech, one of which is fixed by nature, whereas the other is the result of human activity and can be changed, or rather, is being changed all the time. This distinction between primary and secondary or derived words is most important in Arabic literature, which divides words into two classes, 'roots' (*uṣūl*) and 'branches', i.e., 'secondary words' (*furūʿ*).<sup>22</sup> The two layers of speech are also called—if one looks at speech from a glottogenetic point of view—'impositions'. The doctrine of the two impositions of speech was known to the Arabs from the translation of the relevant passages in Ammonios' commentary on Aristotle's *De Interpretatione*,<sup>23</sup> which constituted one of the major sources in relaying Stoic doctrines to the Arabic world.

True language (*orthos logos*), says Chrysippos, is just as natural (*phúsei*) as are law and equity.<sup>24</sup> In this respect, his views about the development of human society concur with those of the Sophists, who created the famous distinction between natural and conventional

*multitudo, contrarietas, etiam varietas*, cf. Barwick, 1937, 58–69. We find the same categories in Say. Mazh., I, cap. 23–4, pp. 187–207 (on figurative speech (*maghāṭ*) and etymology (*ḥikmah*)).

<sup>20</sup> Anglist. dialect. VI, 9, 18–9: *Stoici autem dicunt ... nullum esse verbum, cuius non causa explicari uirgo possit* (The Stoics assert ... that there exists no word whose origin cannot be determined exactly).

<sup>21</sup> Say. Mazh. I, 201, 5–7, a quotation from the *Ṣaḥīḥ al-nawāzil*, probably the one written by Abū Ḥayyān al-Garnāṭī (d. 1344/143) (A 104).

<sup>22</sup> The blurring of this distinction between the *uṣūl* and the *furūʿ* appears in the Zāhiriya system, which regards it as an encroachment upon the power of Aḥbāb: 'Dies n'a pas créé des racines sur lesquels l'homme aurait eu la permission de broder pour les adapter aux besoins de ses libres entreprises intellectuelles. Il a créé les mots rāḥ, simples ou dérivés, contenant en eux leur signification, c'est-à-dire la règle totale de leur usage' (Armañiez, 1956, 86: cf. also pp. 154 sqq.).

<sup>23</sup> Cf. above, chapter VI, note 38.

<sup>24</sup> SVF 3, 76, 4–6.

institutions (*nómoi* vs. *phúsei*).<sup>25</sup> But the Stoa by no means regarded human inventions as being necessarily bad, as the Sophists had done; for the Sophists, the two poles 'natural' and 'conventional' stand in opposition; for the Stoics, civilization (*ars*) is something human beings achieve by means of their divine reason (*ratio*), which is a gift of nature.<sup>26</sup> Civil law, for instance, is the adaptation of common, natural law to the needs of civilization, but always in accordance with that natural law: law is the highest reason, implanted in nature (*lex est ratio summa insita in natura*),<sup>27</sup> and that natural law is the starting-point for instituted law (*a lege duendum est iuris exordium*).<sup>28</sup>

In this way, Stoic theory provided a compromise between the two poles of *ars* and *natura* by claiming their essential identity: civilization is nature expressed by human custom (*usus*). These three categories exercised an enormous influence upon every theory of civilization, and, through these theories, upon general education throughout antiquity. In the words of Pinborg: 'Aus dem berühmten sophistischen Konflikt *phúsei* contra *nómoi* ... entsteht die vermittelnde Theorie vom Töner der *natura*, *ars*, *usus*, das die Entwicklung ... menschlichen Fähigkeiten und Institutionen bedingt, sowohl im allgemeinen als Stufen der Kulturgeschichte, als im Individuellen als Prinzipien der persönlichen Ausbildung'.<sup>29</sup>

One of the most important facets of civilization is language, without which no convention between human beings is possible. We have seen that according to the Stoa, language is in origin a natural, physical thing, consisting in 'first words' (*prōtai phōnai*), which are placed on the right things in the right way.<sup>30</sup> This first stage represents the element *natura*. Later, speech is codified and regulated by the element *ars*, the result being the *usus*, normal everyday speech.

Hence it follows that we have to distinguish between basic words and derivatives. The basic words are words from the first stage of language: they are 'natural' (*phúsei*), i.e. they are in accordance with nature and they tell us something about the essence of the things denoted by them. The derivatives are words of the later stages: they are more arbitrary and their original form may have become confused

<sup>30</sup> Cf. above, note 17.

by frequent use. This means that in order to trace them back to their original form we need a scientific discipline, the science of etymology. Later grammarians used this historical distinction in a more grammatical and less principal sense, when they spoke about the 'first imposition' and the 'second imposition' (*prôtê thêsis kai deutêra thêsis*), as an indication of the difference between 'root words' (*prôtorûpa*) and 'derivatives' (*parâgoga*). We find this for the first time with Dionysios Thrax: 'A root word is a word that is said according to the first imposition, e.g. "earth"; a derivative is a word that derives its origin from another word, e.g. "earthly"'.<sup>31</sup> The connection with the Stoic theories about the origin of speech is evident in a remark made by Chelroboskos: 'The root word resembles the first-created man; the derivatives those who have sprung from him'.<sup>32</sup> In the same way, *prima et secunda positio* are used in Latin grammar, e.g. by Quintilianus: *prima positio* is the basic form of the word as against the *composita*, which stem from a later development.<sup>33</sup> Later *prima positio* receives the meaning 'basic form of the word, from which the declined forms are derived'.<sup>34</sup> Priscianus uses *prima positio* in this sense,<sup>35</sup> and shows that he is aware of the original meaning when he says: 'The first imposition of the verb, which seems to have been proffered by nature itself, and: Therefore it is original, because it received the first imposition from nature itself'.<sup>36</sup>

In all these examples the two stages of development, as we found them with the Stoics, have been put together, and have been transferred to actual, spoken speech. Instead of two chronological levels of speech we now have two coexisting categories of words: the basic words; and those words that have been more or less arbitrarily derived from them, thereby forming new roots. The relation between the two categories, the root words and the derivatives, is likened by Varro to a tree with its offshoots: 'As every offshoot is secondary by nature, because the vertical trunk from which it has sprung is primary, such is the case with the declension in words: *homo* (man) is the vertical, *hominis* (of the man) is the oblique, because it is declined

from the vertical'.<sup>37</sup> This resembles the Arabic division of words into *asîl* and *furâ'*; there is even a terminological resemblance.<sup>38</sup> In Latin grammar, the ultimate criterion for the correctness of speech remains everyday use.<sup>39</sup> We find the same division of words into two categories in the Giant: 'People in their wisdom weighed the language of the Arabs, and found that it consists of two groups of words: the first category of words should be accepted as it is, involuntarily and intuitively, e.g. "stone", "house" ... The other category is the one that is found to be formed by analogical rules; it was not very difficult for people to get to know this category, so they were able to classify and to analyse it, since they could understand it ...'.<sup>40</sup> Note that in Arabic grammar the analogical element is emphasized with regards to the derivatives; in Latin grammar a distinction is made between the analogical element (i.e. the declension) and the anomalous element (i.e. the derivatives proper).<sup>41</sup>

As we have seen in the preceding paragraphs, the original Stoic distinction between two stages of speech, between first and second imposition, between *natura* and *ars*, was modified into a distinction between two levels of speech, on a strictly grammatical basis, between simple and composite words. The original distinction remained in use, however, as a description of two chronologically distinct stages in the development of speech and grammar. The 'artificial' element was now represented by the grammatical categories and terms, whereas the 'natural' situation was that of speech without such classification. This is what has become known as the distinction between object speech and metalanguage. According to the classical theory, objects received their names in the first imposition; subsequently, these names received names themselves, so to speak, in the second imposition. First the names of the first imposition received the name 'name' as a common appellation, and then they were divided into 'nouns', 'verbs' and so on.

<sup>31</sup> Varro, De L.L. 8, 1: *Ut propago omnia natura secunda, quod prius illud rectum, unde ars, sic declinatio: itaque declinatur in verbis: verum homo, obliquum hominis, quod declinatum a recto.*

<sup>32</sup> For *furâ'*: Varro's *propago*; for *asîl* *origo* and a word *radix* to be supposed from the use of *propago* and the simile of the tree. The concept of a root in words is also found in Indian grammar, so that the likeness is hardly conclusive (cf. e.g. Brough, 1931, on the *spôya*-theory). Cf. Barwick, 1957, 29-33.

<sup>35</sup> The analogical element is called *declinatio naturalis*, and the anomalous element *declinatio voluntaria*, Varro, De L.L. 8, 21-3.

<sup>31</sup> Dion. Thr. 25, 3-5 (G 60).

<sup>32</sup> Chelrob. I. 108, 3-5 (G 61).

<sup>33</sup> Quint. instit. orat. I. 6, 10; I. 5, 65; cf. I. 6, 22.

<sup>34</sup> Char. 228, 4; 330, 8; cf. also 233, 4; Diom. 344, 2; 349, 11; 356, 39; 384, 17.

<sup>35</sup> Prisc. instit. 8, 63/621, 26-7; 8, 72/427, 12.

<sup>36</sup> Prisc. II. c. c.: *prima positio verbi quae videtur ab ipsa natura esse prolata; et igitur primitiva, quae primam positionem ab ipsa natura accepit.*

This theory is explained in only a few texts.<sup>42</sup> Ammonios tells us: 'Let it, therefore, be known that nature, realizing that this animal (sc. man) was to be a social animal, gave it a voice, so that it would be able to communicate its own thoughts to others by that means. And men came together and agreed with each other to call this for instance "wood", and that "stone" ... According to this way of indicating things all words were invented. Their second activity was to observe that some words could be construed with an article, though not with a tense—these were called "nouns" ... and that other words could be construed with tenses, though not with an article—these are the verbs'.<sup>43</sup> In Latin grammar the same theory is found with Charisius: 'The Latin tongue, born at the same time as the people of its civilization, satisfied their needs of signifying and of understanding what was said. Afterwards, however, it (sc. the Latin tongue) was examined by experts in the course of time, and it was tamed by the observations of our brilliant minds. While a few of its parts still did not fit in with the norms of speech, it let itself be ruled by grammatical rules and it made that old licence of speech subordinate to reason'.<sup>44</sup>

This chronological account of the origin of two logical levels of speech was later to become a logical distinction between the same two levels, but in a synchronic frame, for the first time explicitly in Augustine's dialogue *De Magistro*. Augustine distinguishes between words that signify words (e.g. *nomen*, *verbum*, and so on), and words that signify things (e.g. *homo*, *flumen*): 'I observe that the word *nomen* and these four words (sc. *Romulus*, *Roma*, *fluvius*, *virtus*), to which we applied the signification of (*nomen*), differ in that the former is the audible sign of audible signs, whereas the latter words, audible signs though they are, are the signs of objects, not of signs'.<sup>45</sup>

<sup>42</sup> Pinborg, 1961, 134-8; 1967, 45-6.

<sup>43</sup> Amm. comment. in Aristot. cat. ed. Busse, pp. 11-2 [G62]: cf. *Metaphysica* in Aristot. de Interpret. ed. Busse, 10, 4 sqq.; almost the same theory in Porphyrios, comment. in Aristot. cat. ed. Busse, pp. 57-8. An amusing practical example: scholia D-T 31, 24 sqq.

<sup>44</sup> Char. 62, 2-8: *Latine vero sermo cum ipso homine ceterarum suarum rerum significandis intellegunturque quae diceret praestitit. Sed postquam plura superveniens societas accepit artifices et sollicitae nostrae observationibus capax est, parva admodum partibus orationis normae suae dissentientibus, regendum se regulae tractat et illam loquendi licentiam servituti rationis addidit. On this passage, Feilbing, 1956, 222 sqq., especially pp. 233-5 with the reconstruction of the prototype of this text; cf. also Vairo, *De L-L*, 8, 3, on the reason for the introduction of declension into speech: 'it helped people to cover the overwhelming amount of ideas with relatively few words'.*

<sup>45</sup> Pinborg, 1967, 46; Coseriu, 1970, 110-4. It seems exaggerated to call Augustine

Returning to Arabic sources, we find that Arabic scholars operate with the same distinction between object speech and metalanguage. They were aware of the difference between two logical levels of language, between names and the names of names. For instance, Rāzi: 'Know that words are most of all expressions for things. These things may be words or something else. Words, as e.g. "noun", "verb", "particle", because each of these three words denotes something that is a word in itself; something else, like "stone", "heaven", "earth"'.<sup>46</sup> We may also refer to the passage from Ibn Ginn's *'Uyūn* quoted above<sup>47</sup> with its distinction between the object word and the word 'x-w-o-t-l'. The most explicit reference to this doctrine is found in Gazzālī who says: 'We say that words are an expression by means of articulated sounds, invented by man's will, for the signification of individual objects. They are divided into those words that were invented primarily, and those words that were invented secondarily. Those words that were invented primarily are e.g. "heaven", "tree", and so on; those words that were invented secondarily are e.g. "noun", "verb", "particle", "imperative", "negation", "imperfect"'.<sup>48</sup> According to Gazzālī, there is even a third imposition, namely when we are dividing nouns into various sub-categories and so forth.

We should also point to the logical distinction between the first and the second intention, used in treatises on logic: 'wo man von einer ersten und zweiten *intention* spricht, je nachdem ob sich das Denken unmittelbar auf die besonderen Dinge oder auf die allgemeinen Begriffe von den Dingen bezieht'.<sup>49</sup> This theory was developed by Ibn Sīnā and we know it had an enormous influence on Medieval scholastic grammar, where it formed the basis for all theories of language.<sup>50</sup>

Apart from these testimonies we also have an explicit reference to the doctrine of the two impositions in the context of an Aristotelian commentary, namely in al-Ḥasan ibn Suwār's notes on the text of the

the 'Wegweiser der Propositionen-Lektüre' (Coseriu, o.c. 105): surely, Ammonios c.q. represent a tradition that is independent from the *De Magistro*. For Augustine also: de Rijck, 1968.

<sup>46</sup> Rāzi, *Maṣ*. 2, 96, 12-4 [A106].

<sup>47</sup> b. Ginn, *Uyūn*, 3, 31, 5-10, cf. above, chapter VIII, note 41.

<sup>48</sup> Gazz. *Asnā*, 3, 19-21 [A107].

<sup>49</sup> Götz, 1965, 281; cf. van den Bergh, 1954, 2, 111. K. Gyeke draws the attention to an ambiguity in the use of *prima intentio et secunda intentio*, (Gyeke, 1971).

<sup>50</sup> Pinborg, 1967, 37 sqq. Note the importance of Gazzālī's doctrine of the three modes of being, as compared with the Medieval *modi essendi, intelligendi et significandi*.

*Categoriae*, which are based on a Greek commentary, possibly by Ammonios.<sup>31</sup> Ibn Suwār says: "We say 'in the first imposition' to distinguish between expressions from the first and from the second imposition, because the expressions from the first imposition are the names ... that have been imposed on the objects primarily, and that have become marks and signs serving as a general denomination for them, for instance when we call this 'silver' and that 'copper', and that 'gold': in short, all expressions that point at one single meaning. The expressions from the second imposition are those that we have separated from the expressions of the first imposition. Their meaning is that we call, for instance, every word that signifies a definite meaning without time ... ('noun'), and every word that signifies a meaning as well as time 'verb' ... These are the expressions of the second imposition; they owe their names to the fact that we invented them after the expressions of the first category'.<sup>32</sup> We assume that Ammonios' commentary on the *Categoriae* was the source of the Arabic theories about the two impositions.

As for the Arabic grammarians, they were only interested in this doctrine in so far as they wanted to use it for the solution of the problem of which part of speech came first chronologically, and whether there ever existed a stage of language in which there was speech without declension. The majority of the grammarians decided that the original Arabic language did probably possess declension, because of the wisdom of the ancient Arabs, who introduced declension into speech in order to prevent ambiguities and doubts about the meaning of a sentence.<sup>33</sup> The old distinction *natura* vs. *ars* becomes here once again pejorative with regard to the 'artificial' element, since according to general opinion, the original language was pure and undefiled, but later generations corrupted it by frequent use of words (*katr al-isti'māl*).<sup>34</sup> Some grammarians, however, asserted that the original language did not possess declension, which was added only later by an effort of reason.<sup>35</sup> Anyway, we may conclude that in

technical grammar the original distinction lost its logical flavour, and turned itself into a practical question.<sup>36</sup>

Another important source for the Arabs was the *Cratylus*. We know that Plato's dialogue about the 'rightness' (*orthotēs*) of the words (i.e. about their value for our knowledge of the essence of the things designated by them) was discussed in the Arabic world. That they understood correctly what the *Cratylus* was all about may be deduced from Fārābī's explanation of the character of that dialogue in his *Falsafat Aflākīn*: "Thereafter, he (sc. Plato) investigates whether this art (sc. the art of happiness) is the art of the science of language, and whether man, if he has a complete knowledge of the words which signify meanings, in so far as they signify something for the majority of the nation to which that language belongs, and if he investigates those words and knows them according to the methods of the scholars of that language, whether in that case man would have acquired a complete knowledge of the essence of things ...".<sup>37</sup> It will be noted that for Fārābī the question is not who created speech, but what is the value of speech for the understanding of objects in the outer world.

MORE data are provided by the writings of Aristotle. According to him, speech is the result of an agreement (*synthēkē*) among men, and it has therefore an arbitrary nature:<sup>38</sup> we cannot judge from the form of the words what is the essence of the things designated.<sup>39</sup> Aristotle,

<sup>31</sup> Cf. chapter VI, note 38.  
<sup>32</sup> h. Suwār, 361, 8-16 [A 108].  
<sup>33</sup> b. Qīn Hāq. 2, 31, 7-32, 5: the doctrine of Abū Ḥijāz al-Aḥbal.  
<sup>34</sup> Ib. 2, 29, 4 eqq.; the same doctrine with Ibn Ḥazm, Arnold, 1956, 45-6.  
<sup>35</sup> Cf. the discussion in Zakkī, 14, 67-9. According to Zakkī speech and declension always coexisted, nevertheless it is possible to say that nouns are prior to verbs, when we make a hierarchical classification, not a chronological one. Zakkī admits that some people have a different opinion (14, 68 ult. - 69, 2).  
<sup>36</sup> This practical question also shows that Arabic grammarians were aware of a certain development in speech. As a matter of fact, the dynamic aspect of speech was a controversial issue in another respect, namely that of the creation of new words (e.g. in the language of the artists), Lougel, 1963, 267-81; cf. Kopt, 1956, 40-5. Fleischer's remark (1961, 17, n. 1) that Arabic theories about language lack a dynamic view does not seem altogether justified. Those grammarians who occupied themselves with the origin of speech certainly made room for a development in speech according to the Shāfi'i doctrine of *ar-rāḥa* - *asr*. Change of language as a result of corruption of the old habits was a commonplace in almost every work about correct language; e.g. b. Qīn Hāq. 2, 29, 1-6, here. Ibn Qutaybā asserts that the Bedouins did not change their speech, but with the introduction of civilization people deviated from the *ṣaḥ* (= 'declension' or *ṣaḥīḥ*) of pure speech, cf. also Fock, 1955, pp. 44 eqq. et passim; Zakkī ap. Lougel, 1963, 206 (19); also b. Qīn Hāq., 2, 5 eqq.; Ibn Ḥazm's views on the changes of language, 141, 1, 30, 8-21.

<sup>37</sup> Far Fals Afl 2, 1-4 [A 108]. The *Cratylus* in Arabic: b.a. Ugalbi's, 1, 201, 5; Kraus, 1942, 2, 238, n. 2. Bergsträsser, 1913, 30. It may be added that the *Cratylus* was also known in Syriac literature, namely in Jacob of Edessa's introduction to his letter on orthography, and in a scholion about the names of God, which also exists in an Arabic translation, cf. Nestle, 1878, especially p. 502.

<sup>38</sup> E.g. Aristot. de interpret. 16 a 19; 16 a 26-9; soph. et. 165 a 7; sens. 437 a 13-5.

<sup>39</sup> That words have no epistemological value is evident from Aristotle's remark, cf.

though, was not interested in the genetic problem of the origin of speech: for him it was important to determine the functional value of the words and the way they function in actual communication; the important thing is that words are conventional, not that they are the result of a convention.<sup>60</sup> Later generations were more interested in another aspect of the matter: the creation of speech by the first communities of men (*nunthekā, thésis*). The term *thésis* must have been taken over rather early by the Arabs, because we find the Arabic equivalent word right at the beginning of Arabic grammar.<sup>61</sup> The Aristotelian point of view was transmitted at a later time, first through the commentaries on the *De Interpretatione*, which were translated into Arabic (particularly the commentary of Ammonius in the notes of Ibn Suwār), and later through the indigenous commentaries, of which Fārābī's *Sarḥ al-ṭibāʾa* shows the best understanding of the original problem.<sup>62</sup> In grammatical discussions, however, we are almost always confronted with the question of the origin of speech: is it a creation of Allāh, or a product of human creativity? This is the problem as it is discussed by Ibn Qinnī, Suyūṭī, and others.<sup>63</sup>

Interpret. 17 a 1-2: 'Every sentence (lógos) is meaningful, not as an instrument (*órganon*), but, as we have said, by agreement' [Q63]. The word *órganon* clearly refers to the *Cratylus*, where Sokrates calls it word an *órganon* *hikanálēkon kai abótēnikón* (Plat. Crat. 388 B; cf. Steinthal, 1890<sup>2</sup>, I, 186-7)—although, according to Ammonius, Aristotle refers here to another thesis, namely that a sentence is a natural instrument of speech, just as the human faculty of speech. Amm. comment. in Aristot. de interpret. 62, 21 sqq., ed. Hume.

<sup>60</sup> Aristotle does not use the native *nunthekā*, but the expression *kata sunthékēn*, which Cauerla, 1970, 65-9, interprets as 'traditional', 'historisch-ethnisch'. According to Hume, Aristotle's purpose is not to define the genetic connection between words and things, but to establish the functioning of words in actual speech. Cf. also ib., p. 82 and pp. 90-3.

<sup>61</sup> Cf. the expression *muḥd'a 'alā* (to have been invented for a certain meaning), e.g. Šāh. Kit. I, 186, 8. According to Weiss, 1966, 38-40, the original meaning of *waḥd* is 'givenness of language'; this meaning gradually gave way to the meaning 'establishment of language', 'origin of speech' (*waḥd al-luḡa*): in his view, the Mu'tazilites were the first to use the word in the sense of 'conventional establishment'. It seems, however, that *waḥd* did not denote the givenness of the relation between expressions and meanings before the introduction of the treatises on the *waḥd al-luḡa* by al-ġī (14th/8th century); cf. also Weiss, ib., 52-3; 78, where it is stated that in the sense of 'conventionality' the term used is *munthabā'a*, not *waḥd*.

<sup>62</sup> Cf. especially Far Šarḥ, Šāh. I - 34, 7 for the different uses of terms such as 'nature' (*ṣubḥ*). Fārābī also uses the Arabic translation of the Aristotelian *nómos*, namely *ṣarḥ* (ib. 27, 13; 20).

<sup>63</sup> Loedel, 1963-4,

Returning to the opinion of the Mu'tazila, we must note that they need not oppose the creation of speech by Allāh on principle, since it could fit perfectly well in their philosophy. On the other hand, a Mu'tazilite could hardly accept the existence of a necessary relation between words and things, created by Allāh or invented by men, because this would impair human judgment and thereby human liberty to choose by his own will. 'They (sc. the Mu'tazila) reason thus: if the knowledge about an attribute is necessary (*darūrī*), then the knowledge about the thing to which it is assigned must be necessary, too. If Allāh the Lofty had created this knowledge in the heart of the wise, by determining such-and-such a word for such-and-such a meaning, it would thence follow that knowledge of Allāh would be necessary. This is contradicted by the reality of the task He imposes upon us (sc. the task to believe in Him)'.<sup>64</sup> The result of this reasoning is a general belief among the Mu'tazilites that language is a product of a conventional agreement (*iqtilāḥ, muwāda'a*) among men.<sup>65</sup> The theoretical possibility remains, though, that men made the first language, and that, after that, Allāh taught them through this language the rest of the languages—which is actually the opinion of 'Abd al-Ġabbār's teacher, Abū Hāsim (d. 933/321);<sup>66</sup> note once again that the Mu'tazila is not opposed on principle to the revelation of a language by Allāh.<sup>67</sup>

However this may be, words were generally regarded by the Mu'tazilites as arbitrary signs (*šimār*), which are used accidentally for certain objects. The word 'sign' (*šimā*) is connected with the problem of the etymology of the word *ism*. This problem is dealt with by Ibn al-Anbārī in the first question of the *Ḥudūd*.<sup>68</sup> Ibn al-Anbārī tells us that the Bagrians—probably represented by al-Mubarrad<sup>69</sup>—derived the word (*ism* from the radicals *s-m-w*, e.g. from the word *summaw* (height), for words are an expression of nominals below them, and

<sup>64</sup> Rāšī, Maf. I, 23, 1-6 [A110]; cf. Šay. Muḥl. I, 12-3.

<sup>65</sup> 'Abd al-Ġabbār, Muḡai, 7, 183, 9-12. The fact remains that at least one Mu'tazilite held that the relation between words and things is completely necessary. This is the opinion of 'Abd al-Raṣṣamān (d. 844/230), cf. Mahdi, 1970, 52, n. 2 and above, chapter 13, n. 61. In this case, however, the relation is considered as being natural (imposed by nature) and not imposed by Allāh. As for the implications of this identity of 'meaning' and 'necessary cause', cf. below, chapter X, note 63.

<sup>66</sup> Rāšī, Maf. 2, 201, 15-6; 'Abd al-Ġabbār, Muḡalibāh, I, pp. 82-3.

<sup>67</sup> Mahdi, 1970, 51, n. 5.

<sup>68</sup> b. Anb. lq. 1, 17-6, 10; cf. id. Asr. 3, 3-5, 18; Lilla, 19, 126, s.v. *s-m-w*; b. Ya'ā, 26, 21-27, 15.

<sup>69</sup> Muḡ. sp. b. Far. Šāh. 57, 17-8.

they are therefore elevated above them.<sup>70</sup> The Kūfaas, on the other hand, derive the word *ism* from the radicals *w-s-m*, e.g. from the words *simā* (sign) and *wasīm* (stigma): 'The word is a sign which is placed upon the thing and by which the thing is distinguished'.<sup>71</sup> Ibn al-Anbārī himself agrees with the explanation of the Kūfaas, although he rejects the etymology proposed by them.<sup>72</sup>

*Simā* is an arbitrary sign, which serves to distinguish between different nominata in a conventional way.<sup>73</sup> The opposite interpretation of *ism* as derived from the radicals *s-m-w*, considers words as something connected with the things designated, and given to them for a special reason, whether by Allāh, or by nature. There is indeed a text where *simā* is used by the advocates of a conventional theory about the origin of speech; Ibn Ğinnī tells us: 'For (according to them) everything happened as if two, three, or more scholars should come together and should want to designate known objects. In order to do so they would choose for every object a sign and an expression (*simā wa-lafz*). By recalling this sign you would know the object it designates, and distinguish between it and other objects, and you would not need to have the object present, if this word was used'.<sup>74</sup> A connection between the Mu'tazila and the etymology *ism* = *simā* is reported by Bāqillānī.<sup>75</sup>

Considering these facts, and the fact that Weil thinks that this problem arose rather late,<sup>76</sup> we suppose that the original discussion about the true etymology of the word *ism* was later translated in terms of the discussion about the origin and the nature of speech. The

<sup>70</sup> Cf. the expression *al-muḥammadiyyat raḥimā* which is used in this context. The idea that words are elevated above the nominata is ridiculed by Ibn Ḥazm (*Kiṣāb al-luḡa*, Cairo, 1321 A.H., 5, 29: 'the fact that we use words like "dog, pig, idolatry, etc." shows that not every word is as elevated as the Basrians suppose'). Cf. Arnauld, 1956, 85.

<sup>71</sup> Ta'lab op. b. Arb. Ins. 2, 4 [A 111]; as a synonym for *summa* the term '*al-ḥimā*' is used, ib. 2, 1, 2. Cf. Abū Ḥ. 'Abbās (probably Ta'lab), *Liḥāz*, 16, 401, 16 from below: 'The noun is a description and a sign which is placed upon the object in order to make it known (by that sign)' [A 112].

<sup>72</sup> Just as Ibn Fāris and 'Ulḥafī do: b. Fār. *Šāh*, p. 57; also 'Ulḥ. *Mās.*, 65-6: *ism* means the same as '*al-ḥimā*', but this does not imply that *ism* is derived from *wasīm*, *simā*.

<sup>73</sup> Or between their various grammatical functions: *simā* as a grammatical sign, e.g. Zaḡ. *Id.* 99, 6; cf. b. Ğin. *Ḥaṣ.* 2, 355, 16: *muḥimā* *bi-l-faḥ*. Ibn Ğinnī uses the term with this meaning of 'grammatical sign' also ib. 2, 300, 4; as a synonym for '*al-ḥimā*'—cf. '*al-ḥimā*' above, note 71—ib. 2, 316, 12 sqq.

<sup>74</sup> b. Ğin. *Ḥaṣ.* 1, 44, 3-6 [A 113]; cf. Loucel, 1963, 267 (36).

<sup>75</sup> Bāq. *Tamh.* 225-7, on the theological implications of the etymology of *ism*. van Ess, 1965, 117.

<sup>76</sup> Weil, 1913, 121.

Basrian etymology in Ibn al-Anbārī's account represents the opinion that words are the expression of the true nature of things, whereas Kūfaan etymology grants words only a conventional, purely arbitrary meaning. It is not clear, however, if these consequences of the two etymologies were already drawn at the time of al-Muḥarrad (the representative of the Basrian theory in Ibn al-Anbārī's account) and Ta'lab, or if they are the result of later theorizing influenced by the Mu'tazilite school.

The orthodox point of view in its most extreme form attributes the creation of each and every word to Allāh Himself. This is mostly based on the Qur'ānic affirmation that Allāh taught Adam all names.<sup>77</sup> There are precedents for this belief in Greek patristic and theological literature, where we can find the tendency not to acknowledge any activity of man in the creation of words.<sup>78</sup> On the other hand, for a follower of orthodoxy it was also possible to combine the two doctrines—creation of speech by Allāh and human activity—and suppose an agreement among men resulting in the invention of speech (which is then arbitrary, of course), but at the same time to state that this agreement first needed an inspiration from Allāh. There is, to be sure, a difference between this theory and the one we reported above from Abū Ḥāsim, but the result is virtually the same. In fact, we even find a Mu'tazilite who held this opinion, namely Abū Ishāq al-Jafarī'nī (d. 1027/418).<sup>79</sup> It was also shared by al-Guwainī, the Imām al-Haramīnī Gazzālī's teacher (d. 1085/478).<sup>80</sup> If instead of 'Allāh' we read the word 'nature' in these combinations of the two doctrines, we have here a faint echo of the Stoic doctrine, even more so if we keep in mind that the original controversy was not about the origin of speech, but about the value of the words for the understanding of the essence of the things designated by them. Interpreted in this way, the same combination is found in Ibn Ğinnī, who states that there are two kinds of words, the first sort not being liable to grammatical analogy (*qiyās*) (i.e. the original, natural words), whereas the second one is (i.e. the derived words which are classified by rules and grammar).<sup>81</sup> Here we are close again to the doctrine of the two impositions.

<sup>77</sup> Qur'an, 2/31; e.g. b. Fār. *Šāh*, 5-8; cf. Loucel, 1963, 255 sqq. (28 sqq.); b. Ğin. *Ḥaṣ.* 1, 40.

<sup>78</sup> Cf. Dussan, 1956, 421-3.

<sup>79</sup> Soy. *Mash.* 13, 8 sqq.

<sup>80</sup> Ib. 34, 3 sqq. Gazzālī mentions the opinion of his teacher as one of the three possible solutions to the problem, in almost the same words as Suyūṭī, *Gazz. Mustap.* 145, 14-7. Cf. Asin Palacios, 1939, 266; Cabanetas, 1956, 44-5.

<sup>81</sup> b. Ğin. *Ḥaṣ.* 2, 42, 9-12, cf. above, note 40.

## CHAPTER TEN

## THE STOIC COMPONENT IN THE THEORY OF MEANING

'How could we say that someone is speaking without thinking, if speech were really the same as thought?'

We have spoken above<sup>1</sup> about the so-called *vole diffuse*, by which Greek doctrines filtered through to the Arabic world, and we have also seen that there was another way, the *vole étroite*, constituted by the translations of Greek learned works, which, in a more organized way, acquainted the Arabs with Greek doctrines during the period leading up to and coinciding with the bloom of the Baghdad university.<sup>2</sup> It has been recognized lately that there are a considerable number of traces of Stoic doctrine in Islamic culture.<sup>3</sup> Many of these can be traced back to general philosophical literature (such as the translations of the commentaries on Aristotle, pseudo-Plutarchos' *Placita Philosophorum*, etc.). But there are also such as cannot be accounted for in this way. In such cases we must resort to the hypothesis of a *vole diffuse*, which found its origin in the still Hellenistic environment of the conquered territories. We have tried to show in the preceding chapters that a number of elements in Arabic grammar came to the Arabs by this *vole diffuse*, i.e. through contact with living Greek grammar. Some of these elements can be traced back to the Stoic roots within this Greek grammar (e.g. Zāgğāgī's definition of the noun;<sup>4</sup> the paradigms for the nouns *ṣarf* and *ṭayn* (or *raḡul*);<sup>5</sup> the distinction between proper nouns and common nouns;<sup>6</sup> the Stoic division of sounds;<sup>7</sup> the Stoic doctrine of phonetic changes;<sup>8</sup> the concept of verbal tense<sup>9</sup>). Other elements must be the result of the

influence which translations of Greek philosophical writings exercised upon Islamic philosophy (e.g. the definition of 'definition';<sup>10</sup> the notion of 'predicate';<sup>11</sup> the Stoic conception of sound;<sup>12</sup> the notion of 'something';<sup>13</sup> the concept of time<sup>14</sup>). In this chapter we want to discuss the part the Stoics played in the movement of ideas with regard to one important problem of Stoic logic, namely the connection between thinking and speaking, i.e. the problem of meaning.

To the logical part of Stoic philosophy belong dialectic (the knowledge of truth and falsity), and rhetoric (the knowledge of eloquence). The science of dialectic is divided by Chrysippos into two parts: the signifying part (*semnanta*) and the signified part (*semnaimena*).<sup>15</sup> This distinction between things which are signified and things which signify, between meaning and sound, and in connection with it, the distinction between thinking and speaking, i.e. between concept and meaning, is essential for Stoic logic. It is true that Aristotle already speaks about the difference between sound and meaning,<sup>16</sup> but in his view meaning is identical with the concept formed in the thinking mind. His distinction between an outer speech (*ἔξω λόγος*) and a speech in the mind (*λόγος ἐν τῷ ψυχῇ*)<sup>17</sup> must be understood in the sense

<sup>1</sup> Cf. above, chapter VII, note 3.

<sup>2</sup> Cf. above, chapter III C.

<sup>3</sup> Cf. above, chapter I, note 37.

<sup>4</sup> Cf. above, chapter VII, note 33.

<sup>5</sup> Cf. above, chapter III C.

<sup>6</sup> Diog. Laert. 7, 41-2 = SVF 2, 41: 'Some people say that the logical part (sc. of philosophy) is divided into two sciences, namely into rhetoric and dialectic... and (they say) that rhetoric is the science of speaking well about the things at issue; and that dialectic is the science of discussing correctly about the things in question and answer. That is the reason why they define it (sc. dialectic) thus: it is the science of truth and falsehood and that which is neither' [G66]. Diog. Laert. 7, 62 = SVF 2, 122: 'Dialectic, according to Pseudo-Aristotle, is the science of truth and falsehood and that which is neither, it happens to deal with that which signifies and that which is signified, as Chrysippos says' [G65].

<sup>7</sup> E.g. Aristotle, rhet. 1405 b 6-8: 'The beauty of a word, as Likoumion put it, lies in the sounds or in the meaning, just as the ugliness of a word' [G66].

<sup>8</sup> This difference is introduced oral post. 36 b 24-7: 'The argumentation is not connected with the outer speech, but with the speech in the mind, because neither is a syllogism (sc. connected with outer speech) for it is always possible to object against outer speech, but not always against inner speech' [G67]. The same distinction between two sorts of speech occurs as early as Plato, Soph. 263, who plays with the words *lógos* and *diálógos*, just as Euzen suffers later used the words *razas* and *orazis* (cf. also Theophr. 189 E = 190 A). This is the source of the distinction between speech-in-sounds and speech-as-thought, later designated with the words *prophorizatus lógos* and *enididaktos lógos*, respectively. Pohlenz has shown (1939, 191-8) that this distinction, though resembling to a certain degree the Stoic theory, cannot be attributed to the older Stoa. What fell normally under the *enididaktos lógos* (cf. SVF 2, 135) was dealt with by the Stoa

<sup>1</sup> And al-Gabbār, Mugnt. 7, 18, 13-4 [A114].

<sup>2</sup> Cf. above, chapter I, note 45.

<sup>5</sup> Cf. above, chapter III B, note 36.

<sup>6</sup> Cf. above, chapter III A, note 12.

<sup>7</sup> Cf. above, chapter III B, note 7.

<sup>8</sup> Cf. above, chapter II.

<sup>9</sup> Cf. above, chapter II, note 44.

<sup>10</sup> Cf. above, chapter III C.

of his theory of meaning, which was later to become the basis for almost every theory of meaning in the Western world during the Middle Ages: 'What is in speech is a symbol of what is in the mind, and what is written is a symbol of what is in speech. Just as the letters are not the same for everyone, neither are the sounds. The emotions of the mind, however, of which these (sc. the sounds) are the immediate signs, are the same for everyone, and the things (sc. in the outer world) of which these (sc. the emotions in the mind) are the images, likewise'.<sup>19</sup> It will be clear that this tripartition 'things in the outer world'—'concepts = meanings'—'sounds' is different from the Stoic doctrine, which distinguishes most carefully between concept and meaning. But when even Steinthal tells us that the Stoics themselves did not understand their own innovation, and that in practice they confused their newly discovered 'meaning' with the concept or the thing in the outer world designated by it,<sup>20</sup> it seems necessary to consult the sources again. We must keep in mind, of course, that so revolutionary an innovation could very easily be misunderstood by later authors, but the fact that they confused it with the traditional point of view in their accounts<sup>21</sup> does not prove that even the Stoics themselves were inconsistent in their own doctrine.

under the heading *σημασμένον*. In other words, the Stoics know about the distinction, but only in so far as they distinguish strictly between thinking and speaking, and not as a distinction between the physical and the psychological side of speech. One could say that the *σημασμένον* are identical with, or have the same content as, the *εμφάνητος λόγος* in a system which does not distinguish between thoughts and meaning. Porphyrios attributes the distinction between the *προφορικὸς λόγος* and the *εμφάνητος λόγος* explicitly to the Stoics (de abst. 3, 2-17), which could be interpreted as follows: that the Stoics did not use the distinction but in the sense of an opposition between the thoughts (*ἐννοιαί*, SVF 2, 83) = *εμφάνητος λόγος* and the sounds together with their meaning (*ᾠήματα* + *ᾠήματα*) = *προφορικὸς λόγος*. This opposition was later understood as a distinction between inner and outer speech.

<sup>19</sup> Aristot. de interpret. 16 a 3-8 [G58]. For a discussion about this difficult text: Steinthal, 1897, I, 185 sqq.; he translates: 'Die Sprache ist Zeichen für die Erregungen der Seele, und das Geschriebene für jene; und wie die Buchstaben überall überaus dieselben sind, so auch nicht die Laute. Die Erregungen der Seele dagegen, von denen letztere zunächst Zeichen sind, sind dieselben überall, und die Dinge, von denen jene (die Sealeindrücke) Abbilder sind, sind ebenfalls dieselben'. Cf. also Pinborg, 1967, 36, who quotes Boethius' translation into Latin of this text, through which it became known to Medieval scholasticism in the Western world; also Pinborg, 1972, p. 30-1. Cf. also Achard, 1963, pp. 113-5; Kretzmann, 1974; Coeris, 1970, 65-70; Laskin, 1971, 21 sqq.

<sup>20</sup> Steinthal, 1897, I, 288: 'Es scheint auch kaum, als wären die Stoiker im Stande gewesen, das Wesen desselben (sc. of the *lektrón*) genau anzugeben und festzuhalten; er schmilzt ihnen doch bald mit dem *máema*, bald mit dem *wechselnden* zusammen'.

<sup>21</sup> Cf. below, note 52.

The text which, unwittingly, gives us the clearest insight into the real meaning of the Stoic doctrine, and which at the same time betrays the reason for the innovation—perhaps even more so than the *ἀντιφθέγγον* arguments mentioned by Sextus Empiricus and Augustinus—is the *lemma* of an ignorant scholiast on Homer, who observes on Iliad B 349: 'Λεῖ (*pseudós*): instead of "false" (*pseudēs*). Such things are called by the Stoics *lektrá*, which are used instead of other words with regard to the signification'.<sup>22</sup> The sense of this is clear: in the verse from the Iliad there is a discrepancy between the meaning of what is said and what we think when we say it, and this is, according to the scholiast, the famous Stoic *lektrón*—he does not, of course, understand the frame-work within which the *lektrón* operates in the Stoic doctrine. But it must have been this discrepancy which led Chrysippos to write about anomaly, i.e. about the fact that similar things are indicated by different words and different things by similar words,<sup>23</sup> and it must have been this discrepancy which led the Stoics to distinguish between meaning and thought—possibly as a result of their non-Greek background, which made them more sensitive to such discrepancies than the Greeks themselves.<sup>24</sup> The same intention is evident in a fragment from Plutarchos: 'They themselves (sc. the Stoics) say that one who forbids something says something, forbids something else, and commands something else again. For when you say "Do not steal!", you say those words "Do not steal!", you forbid the stealing, and you command not to steal'.<sup>25</sup> Here we find the distinction between the signifying sounds (the words 'Do not steal'), the concept in the mind (the prohibition to steal), and the linguistic meaning (a negative imperative of the verb 'to steal').

This implicit distinction is explained in the more 'official' texts, like for instance in a fragment from Ammonios, who speaks about

<sup>22</sup> SVF 2, 169 [G60].

<sup>23</sup> Varro De L.L. 9, 1: ... *quod et Chrysippus de inaequalitate cum scribit terminis propositum habet ostendere similes res distinctibus verbis et disparibus similibus esse verbum narrat* ... Meise has explained this text correctly with the help of a fragment from Simplicios (1952, 12): 'Es handelt sich um ein formallogisches, kein im eigentlichen Sinne sprachliches Problem'; cf. Barwick, 1957, 53-4; Gentiletti, 1961, 107-8; 114 sqq.; the fragment from Simplicios: SVF 2, 177.

<sup>24</sup> For the non-Greek background of many Stoics. Pohlenz, 1939, 157. We may also point to Chrysippos' interest in figurative speech, which was probably for him more figurative than for native Greek speakers; cf. SVF 2, 239, 28; 260, 39; 261, 16; 263, 3; 263, 9; SVF 3, 125, 12.

<sup>25</sup> SVF 2, 171 [G70], cf. maybe also the quotation from Ps.-Apuleius, SVF 2, 204 a, and van den Bergh, 1954, 2, 4.

the difference between Aristotle and the Stoics on this point, although he does not seem to be too well informed: 'By these words (sc. the text we quoted above from the *De Interpretatione*), Aristotle teaches ■ what is principally and immediately signified by them (sc. ■ sounds), namely the concepts, and through them ■ things, and also, that we cannot suppose something between the concept and the things, as the Stoics did, calling it *lekton*'.<sup>26</sup> This question—whether meaning is something apart from thought or not—formed in the Middle Ages one of the most important issues in the discussions between the Modists, who held the first opinion, and the Nominalists, who held the second: 'Die Frage ob die Bedeutungen der Wörter und der Sätze irgendeine Existenzform haben, oder ob es nur die Wörter und ihren willkürlichen Gebrauch gibt, gehört von jeher zu den am heissesten umstrittenen Grundfragen dieser Disziplin'.<sup>27</sup>

A systematic discussion of ■ of the Stoic theory is provided by Sextus Empiricus in connection with ■ problem whether we can find truth and falsity in the sounds, in the meaning, or in the activity of the mind: 'The people of the Stoics say that three elements are connected with each other: that which is signified (*semnainomenon*), that which signifies (*semnainon*), and the incidental thing (*tuchetikon*). Of these elements the second one is the sound, for instance *d-i-d-n*, the first one the meaning (*pragma*) itself, which is indicated by it, and which we grasp in its correlation with ■ understanding, whereas the barbarians do not understand it, even though they hear the sounds. The incidental thing is that which is in the outer world, in

<sup>26</sup> Ammon. comm. in Aristot. de interpret. 17, 24, ed. Busse = SVF 2, 168 [G71]. It is, of course, true that Ammonius' statement that Stoic *lekta* are something intermediate between thoughts (concepts) and objects, is not entirely correct—he ought to have said that they are something intermediate between sounds and concepts (Long, 1971, 81). On the other hand, we may perhaps understand this statement in a less technical way ('something apart from thoughts and objects'). Long's equation of the triad *logikē phantasia*—*lekton*—*phantasma* with the triad *semnainon*—*lekton*—*tuchetikon* (ib. 83) cannot be accepted. Objects cause an impression, a representation in the mind (*phantasia*); on a linguistic level objects are represented by the linguistic entity sound—meaning; some representations correspond to, correlate with such meanings, and are therefore called rational (expressive, communicable) representations. It is incorrect to assert that 'the words which an auditor receives must be the utterance of the speaker's rational presentation' (Long, ib.). The hearer receives sounds emitted by a speaker's *phōnētikōn*, one of the faculties or the parts of the mind!

<sup>27</sup> Pinborg, 1967, 9, who follows this question up to modern times.

this case Dion himself'.<sup>28</sup> We do not agree with Steinthal that in this case meaning is confused with thought.<sup>29</sup>

It seems that *lekton* was not originally a technical term, but an expression which indicated the principal characteristic of the 'things' (*pragmata*, in the Stoic sense of 'meaning'), namely that they are used in speech, and that they are the meaning of the actual sounds. This non-technical use appears in the following passages: 'Sounds are uttered, ■ the meanings (*pragmata*) are said; that is precisely the reason why they are also (called) *lekta*';<sup>30</sup> and: 'Every meaning (*lekton*) must be said, whence it obtained this name'.<sup>31</sup>

Augustinus, in the fifth chapter of his *De dialectica*<sup>32</sup> sums up in a similar way the elements which constitute meaning. He says: 'A word (*verbum*)<sup>33</sup> is a sign of any given thing which can be understood by a hearer, if it is uttered by a speaker. A thing (*res*) is everything which can be felt or understood or what is hidden ... Everything in the word which is not perceived by the ears, but by the mind, and which is deposited in the mind, is called *dictibile*'.<sup>34</sup>

<sup>28</sup> Sent. Emp. adv. math. 8, 11 = SVF 2, 166 [G72].

<sup>29</sup> Steinthal (1890<sup>7</sup>, I, 289), who says that in this case the *lekton* is confused with the *idēma*. The word *σημαίνον* is not to be translated as 'das im Verstande vorhandene', but it is to be understood as 'beziehend zu und korrelierend zu dem, was in der Seele' (for the meaning of the word, cf. Laddell/Scott, x v (to the text quoted there add Apoll. Dysk. synt. parum, cf. Schneider's index, s.v.); Long, 1971, 77, 80, 84, 108, note 25, 110, note 21).

<sup>30</sup> SVF 2, 213, 223, a quotation from the *Techne* of Diogenes the Babylonian [G73].

<sup>31</sup> Sent. Emp. adv. math. 8, 10 = SVF 2, 167 [G74]. One wonders whether the term *legimena*, which occurs in the title of several Stoic works, might not mean the same thing, viz. meaning in so far as it is expressed in what is said; cf. a book of Chrysippus *Peri ton mathētikōn kai logikōn kai tōn legimēnōn*, SVF 2, 6, 17, and another one *Peri ton mathētikōn kai legimēnōn*, SVF 2, 6, 38, especially the title of a book of Antipater *Peri tōn kai tōn legimēnōn*, SVF 3, 247, 256 (H. 4 = *phōnē*: *legimēna* = *lekta*, *pragmata*?) Cf. the term *legimēna* used by the Aristotelian commentators, Long, 1971, 107, n 13, 108, n 23.

<sup>32</sup> This source had been already used by Schmidt for his reconstruction of the Stoic doctrine, 1839, 54-5; cf. also Barwick, 1957, 8-28; de Rijck, 1968; Ciceron, 1970, 105-25.

<sup>33</sup> *Verbum* is used by Augustinus in two senses: it can mean 'the phonetic shape of a word', but also 'unity of sound and meaning, linguistic entity', approximately in the same way as Apollonios Dyskolos uses *lekton* in the sense of 'word in so far as it means something', cf. Schneider's index, s.v. In this sense it is equivalent to the Stoic *lekta* *semnaitika*, *phōnē* *semnaitika*, cf. SVF 2, 48, 29-30; 3, 213, 8.

<sup>34</sup> August. dialect. V, 7, 6-7; 8, 4-5: *Verbum est unitivusque rei signum, quod ab audiente potest intelligi, a loquente probatum. Res est quicquid vel sentitur vel intelligitur vel latet ... Quicquid autem ex verbo non aures sed animus sentit et ipso animo tenetur inclutum, dictibile vocatur.*

Several attempts have been made to give the Stoic concept of meaning its place within the logical context,<sup>33</sup> but its value has been expressed very well by Steinthal, notwithstanding his negative attitude to the Stoic innovation: 'Das *lekton* ist nur das, was Aristoteles *τὸ ἐν τῇ φωνῇ*, *hui en tēi phōnēi katáphaseis kai apóphaseis* nannte, und was auch er von der *dóxa* noch unterschied. Der Unterschied liegt nicht im Inhalt (denn die Vorstellung und das *lekton* haben denselben Inhalt), sondern in der Existenzweise, wie namentlich *ἡσυχία* der Ansicht der Stoa der Fall sein musste'.<sup>34</sup> We must add, though, that in the Stoic doctrine there was a difference between the *lekton* and the 'Vorstellung' (*noēma*), not only ontologically (non-existing *lekta* vs. corporeal existing *noēmata*<sup>35</sup>), but in practice as well, as we have ■■■ for instance in the remark of the scholiast. It was precisely this difference which led the Stoics to stipulate something else, apart from the idea (*noēma*).<sup>36</sup>

Several authors suppose a connection between the Stoic term *lekton* and the Arabic word *ma'nā* (meaning),<sup>37</sup> but this supposition is based exclusively on philosophical texts. One tends to forget that the first occurrence of the Arabic term was in grammatical texts, namely in Sibawaihi's *Kitāb*. This means that if there is any connection with ■■■ Greek term, this connection should be proved primarily through the grammatical contact between Greeks and Arabs, and not through ■■■ translations of Greek philosophical works.

In Arabic grammar, we find two pairs of words which indicate the opposite entities, sound and meaning. In the first place there are the

<sup>33</sup> E.g. Christensen, 1962, 44-4; Bochart, 1936, 126 sq.; Mates, 1961<sup>2</sup>, 11-26; Mignaut, 1965, 88-103; Verbeke-Reymond, 1941; Loeb, 1971; Kneale/Kneale, ■■■ 139-43; Plebe, 1972, 31-2.

<sup>34</sup> Steinthal, 1896<sup>2</sup>, I, 296.

<sup>35</sup> The incorporeality of the *lekta*: Sext. Emp. adv. math. 8, 409 = SVF 2, 85; cf. SVF 2, 170; 2, 331; 2, 48, 23 and cf. the discussion Loeb, 1971, 84-90. The *lekton* possesses only a *hypheisthēnē*, and it can only be conceived of by inference, by abstraction (*hēnē mēthēnē* *idēnē*), Diog. Laert. 7, 53; Sext. Emp. adv. math. 9, 393; Loeb, 1971, 109, n. 54.

<sup>36</sup> Cf. also Schmidt's excellent summary of the Stoic views about meaning, 1839, 35, n. 78: 'Hoc primum vero cave putari Stoicis fuisse arborem illam ipsam s. illud nō *nūchōma*, in quod ita primum incidere, neve etiam ipsam illam *visionem* s. *phantasiam*, quam arbor effecerit in animo tuo. Utriusque enim non solum ipsa arbor, verum etiam vinum, quippe quae nihil sit nisi *pōs* *ēchōn* *hēpēmētōn*, secundum Stoicos ad res corporales pertinet. sed primum est incorporeale illud, quod cum *lex* *vox* s. *phōnē* alterius cultuiparis arbitrium attingit, natusqueque voci isti subesse vel intelligi vel sentiari'. Cf. Christensen, 1962, 45-6.

<sup>37</sup> Roscher, 1966, 80, n. 39; van Ess, 1970, 33; Gölje, 1965, 280 sq.; van den Berghe, 1954, 2, 188.

words *ism* and *musammā*, which indicate the opposition between the word and the real object in the outer world denoted by that word. Sibawaihi does not use the term *musammā* in his *Kitāb*, but his name is mentioned in the discussions about the identity of *ism* and *musammā*.<sup>38</sup> For these two terms we find a clear parallel in Greek texts: Ammonios uses the terms *ónoma* and *onomázōmenon* in his commentary on Aristotle's *De Interpretatione*: 'For if the name of something is the name of a nominatum, it is clear that in the absence of a nominatum the meaningless sounds are not names'.<sup>39</sup> *Onomázōmenon* is also found in the technical vocabulary of Apollonios Dyskolos.<sup>40</sup> In all probability this pair of words found its way into Arabic grammar and logic through the translations of Greek philosophical writings. This explains why precisely these two terms were used in the discussions about the identity of *ism* and *musammā*, which is a logical issue of a later date. We do not believe, therefore, that Sibawaihi used the term *musammā*, and the occurrence of his name in this context must be explained in some other way. We refer to the discussion about the meaning of the term *musammā* as opposed to *ism*.<sup>41</sup>

In the second place, we have the pair *lafz* and *ma'nā*, as the expression of the opposition between a phonetic expression and its meaning. These terms are equivalent to the current distinction in later Greek grammar between *phōnē* (sound) and *sēmainómenon* (meaning).<sup>42</sup> The basis for this opposition is found in the Stoic theories on meaning. The Stoics made a strict distinction between the phonetic and the semantic aspect of the linguistic sign, as we have seen in the quotation from Sextus Empiricus. *Sēmainon* is the signifying, i.e. phonetic aspect (= *phōnē*), and the *lekton* is its semantic correlate (= *sēmainómenon*). In Arabic grammar *lafz* and *ma'nā* are used in exactly the same way, viz. as terms for the two aspects of the linguistic sign. For 'sound' as a linguistically irrelevant entity, the Arabs used *sawt*; in Greek grammar we find in this case also *phōnē*. *Lafz* and *ma'nā* remained the

<sup>38</sup> Cf. above, chapter VIII, note 67.

<sup>40</sup> Apoll. Dysk. synt. 113, 11.

<sup>41</sup> Cf. above, chapter VIII.

<sup>42</sup> Or *deíximenon*, cf. Scholfield's index, s.v.; only once the term *lekton* is used in combination with *phōnē*, adv. 136, 32. Heintze, 1969, 69-82, discusses the significance of the *ma'nā/lafz* controversy in literary theory.

current expressions, both in Basrian and Kufan grammar,<sup>43</sup> and the distinction was maintained by later grammarians.

There is no direct proof, apart from the resemblance in meaning (the verb *'ana* could translate the Greek verb *lēgein*, to intend), that *ma'nā* was a calque of the Stoic *lekton*, but whatever may have been the terminological connection between the Greek and the Arabic pair of words, it seems that in any case there is a link between the word *ma'nā* and the Stoic term *pragma*, which is used as a synonym of *lekton*. At first, *pragma* had the non-technical meaning of '(some)-thing'.<sup>44</sup> Then, in Stoic terminology, it received the meaning 'thing signified by the sounds, meaning' (= *lekton*). Still later, we find *pragma* mostly in the sense of 'something abstract', as against *sōma*, which denotes a concrete object. This new meaning may have been prompted by the fact that the Stoa believed the *pragmata* (in the Stoic sense of 'meanings') to be bodiless.<sup>45</sup> In its new meaning, this word is found for instance by Dionysios Thrax, who divides words of the nominal class into concrete and abstract ones: 'Noun is a part of speech with cases, which can signify a body or an (abstract) thing'.<sup>46</sup> We find the same division into abstract and concrete nouns with Zamakhshari, who uses the terms *ism 'ain* (concrete noun) and *ism ma'nān* (abstract noun) for the two categories of nouns.<sup>47</sup> Here the word *ma'nā*, which is supposed to be the translation of the Stoic term *lekton*, appears as a translation of the word *pragma*, which—as we have seen—was used in Stoic terminology as a synonym for that same term *lekton* with the sense of 'meaning'. Ibn Ginnī uses the same terms *'ain* and *ma'nā*, and he even gives as the first two examples for the category of the concrete nouns the very two nouns used by Dionysios Thrax in this context: '... the *muṣḍarāt* are the generic expressions for the abstract nouns (*ag'nār al-ma'ānī*), just as other words are the generic expressions for the concrete nouns (*ag'nār al-a'yān*), for instance "man", "horse", "boy", "house", "garden"...'.<sup>48</sup>

As a consequence of the abstract meaning of the word *ma'nā* and of the confusion in the Greek world about the precise meaning of the word *lekton*, which was often thought to be equivalent with the

notions 'idea, thought', we find *ma'nā* in the translations of Greek philosophical writings as a synonym for the Aristotelian *noēma*. We do not agree with van Eas that this translation was caused by the nearly identical meaning of the two terms;<sup>49</sup> the difference between thought and meaning was fundamental in Stoic logic, as we have explained above. But this difference was misunderstood or not understood at all in classical antiquity.<sup>50</sup> This misunderstanding of the meaning of *lekton* and *pragma* also explains the translation of the Greek term *lógos* (sentence) by *ma'nā* in the text of Ḥunain.<sup>51</sup> Possibly there was also some ambiguity, caused by the use of *pragma* in some contexts where it almost seems to mean 'sentence'.<sup>52</sup> The confusion reaches its height in the commentary of al-Fārābī, who translates the Aristotelian word *pragmata* by *ma'ānī*, apparently because he misunderstood the word and took it in its Stoic sense. Aristotle, of course, did not know this Stoic sense: he used the word for the objects in the outer world (which are indicated in Stoic terminology by the word *enuchēnonta*).<sup>53</sup> The same incorrect translation is found in Ḡabīr ibn Ḥayyān.<sup>54</sup>

In view of the foregoing we must distinguish between two uses of the word *ma'nā*: on the one hand, we have *ma'nā* as the counterpart of *lafz*, in the sense of 'meaning correlating with a sound'; on the other hand, we have *ma'nā* in the sense of 'something abstract'. Possibly under the influence of the second use, *ma'nā* is often used in almost the same way as the *eidos* of Platonism: it is then an abstract correlate of something physical in the physical world. This abstract correlate can be situated within or outside the mind, i.e. in the speaking subject or in the objects. The 'meaning which resides within the mind' (*ma'nā qā'im fi 'n-nafs*) has been the hotly debated subject of many discussions. Relevant information can be found in the chapter dealing with the refutation of those who claim that speech is a meaning within the mind, in the seventh book of 'Abd al-Ḡabbār's *Muḡnī*.<sup>55</sup> When his adversary tries to convince him that this supposed meaning within the mind is identical with thought, 'Abd al-Ḡabbār retorts: 'and if he says "what I mean is thought and reason, because

they are speech (*kaldm*), and what we hear is an indication of it", we answer: "if that is what you mean, you use the wrong terms, although you hit on the right meaning—just as someone who claims that movement is a meaning within the mind, thereby indicating the will (i.e. it was never our purpose to deny the existence of thought: the only thing you have done is to give it another name). We know for sure that there is no connection between thought and the expression (*'ibāra*) of that thought. So, how could the expression be called an indication (*dalāla*) of that thought?"<sup>52</sup> Here we find expressed in a somewhat crude way the essence of the Stoic theory that there is no identity of thought and speech. Otherwise, as 'Abd al-Gabbār puts it, it would be impossible to say that someone 'speaks without thinking'. We will find Ibn Hazm using the same theory.

On the other hand, we cannot identify the *ma'na* with the physical objects themselves, in the way al-Fārābī and Ḡābir did in ■■■■ passages quoted above—probably because they misunderstood the ■■■■ of the Aristotelian term *pragmata*. When Fārābī talks about the *traces* (*dirār*) in the mind, which are imitations of meanings existing outside the mind,<sup>53</sup> he is in all probability referring to physical objects. On the other hand, when the Mu'tazilites are talking ■■■■ *ma'na* outside the mind, they are referring to something non-physical within the objects.

The meaning of ■■■■ term *ma'na* ■■■■ works of the Mu'tazilite philosopher Mu'ammār (d. 835/220) has been studied by Frank.<sup>54</sup> The gist of his conclusion is that *ma'na* often receives the meaning 'cause' (*'illa*).<sup>55</sup> This means that *ma'na* is 'the intrinsic causal determinant of the thing being so', in other words: the inhering of a certain accident in a certain substance is caused by an infinite series of causal determinants (*ma'na*)—these determinants are infinite because each of them has to be caused by another one. This is the 'coercive cause' (*ma'na*

*māghib*), of which 'Abd al-Gabbār speaks.<sup>56</sup> When there is in every thing something which causes it to be the way it is, and when this something is called *ma'na* (meaning), we may naturally suppose that this 'meaning' is necessarily connected with the word which indicates the object—which is what one Mu'tazilite actually holds.<sup>57</sup> We will not enter here into the question which of the two theories originated first, and whether we can explain Mu'ammār's theories from this opinion about meaning, or the other way round.

It is not necessary, though, to go as far as the Mu'tazila, and conceive of the *ma'na* as a sort of autonomous cause within the object, always coexisting with the object itself. We may also regard them as *intentiones universales* in the objects, put there by Allāh, and forming the material for the thinking mind. This conception is found in the psychological theories of Ibn Ruṣd and Ibn Sīnā.<sup>58</sup> In their theories, *ma'na* are those elements in the objects which are not perceived by the physical senses, but only by some sort of perceiving faculty of the mind (called by Ibn Ruṣd *qawwa mutaḥakkika* and by Ibn Sīnā *qawwa ḥāsiya*):<sup>59</sup> 'As for the meaning, it is that which is perceived by the mind within the object that is perceived, without the senses being able to perceive it (sc. that meaning) in the first place'.<sup>60</sup> With this we may compare the Stoic definition of 'meaning' we quoted above—(*semantōmenon*) is the meaning (*pragmata*) itself, which is indicated by it (sc. the sound), and which we grasp in its correlation with our understanding'—:<sup>61</sup> in the Stoic definition thought and meaning are parallel developments in the mind, whereas in the theories of Ibn Ruṣd and Ibn Sīnā meaning is situated within the physical objects. In that case, the meaning of *ma'na* is very close to the Aristotelian concept of 'form'. There is a faint reminiscence of Avicenna's incorrect observation that the *lektōn* is something between the concept and the object—and not something between the sound and the concept, as he ought to have said.<sup>62</sup>

All this is absolutely unacceptable to Ibn Hazm (d. 1064/456). For him as a Zāhirite and a profound believer in the creation of speech by

<sup>52</sup> 'Abd al-Gabbār, *Mughni*, 7, 14-20.

<sup>53</sup> Ib. 18, 6-11 [A 116]. Probably, 'Abd al-Gabbār's adversary in this discussion was an Aḡarite. We find the Aḡarites as the defenders of the theory that language is a *ma'na qā'im fi 'l-nafs* in a treatise of the Hanbalite Ibn 'Aqā (d. c. 1095/490), *Rasā'il*, pp. 22-100.

<sup>54</sup> For Sarb, 24, 24-25, 1 [A 117].

<sup>55</sup> Frank, 1967; cf. Nader, 1956, 208-10.

<sup>56</sup> To Frank's quotations we may add b. Hazm, *Iḥṣān*, 8, 1129, 9-10: 'Some of them call the causes (*'ilm*) meanings (*ma'na*), and this is one of their grossest heresies, and a false doctrine of their followers, because meanings are the explanation of sounds (sc. and not the cause of something)' [A 118].

<sup>59</sup> Cf. Gāzje, 1971b.

<sup>60</sup> Cf. Gāzje, 1965.

<sup>61</sup> b. Sin. *Siḥr*, 43 [A 119]; cf. Gāzje, 1965, 279.

<sup>62</sup> SVF 2, 166; cf. also the remarks in the scholia D.T. on abstractions, 217, 7-8; 368, 9-11; 572, 17.

<sup>63</sup> Cf. above, note 26.

Allāh, the meaning of a word is not identical with something in the objects, nor with something in the mind: meaning is something objective connected with the phonetic expression. A word has a meaning, because Allāh provided it with that meaning. We must interpret that meaning otherwise than literally, not to mention changing it. We must accept the apparent and evident meaning of speech, such as it is evidently understood by everyone in common discourse (*dhār*).<sup>99</sup> This means that the relation between a word and its meaning is necessary, not because of an infinite series of *ma'āni* as in the theories of Mu'aminar, but because Allāh created words and meanings together. Our own intention (*maḥṣūd*) can only be expressed in accordance with the objective intention of the word (i.e. the meaning): 'It is correct to say that what is intended (*maḥṣūd*) by the imperative is a meaning (*ma'nā*) reserved to its phonetic expression and to its morphological structure'.<sup>100</sup> (i.e. the imperative has a meaning, and our role is restricted to putting that meaning to a use). The meaning correlates with an object in the physical world (*muḥammad*), not with our concept of that object. As the result of completely different reasons and motives, Ibn Ḥazm and the Stoics arrive at the same point of view: meaning and concept are different entities, although they are both correlated with the physical objects.

Finally, we must point to another meaning of the term *ma'nā*, namely 'intention', almost synonymous with terms such as *ma'arad* and *maḥṣūd*. Probably this sense was in part brought about by the meaning of the verb from which *ma'nā* is derived: 'and 'to intend'.<sup>101</sup>

<sup>99</sup> Whence the name of the school, the 'Zāhirīyya', Goldziher, 1884.

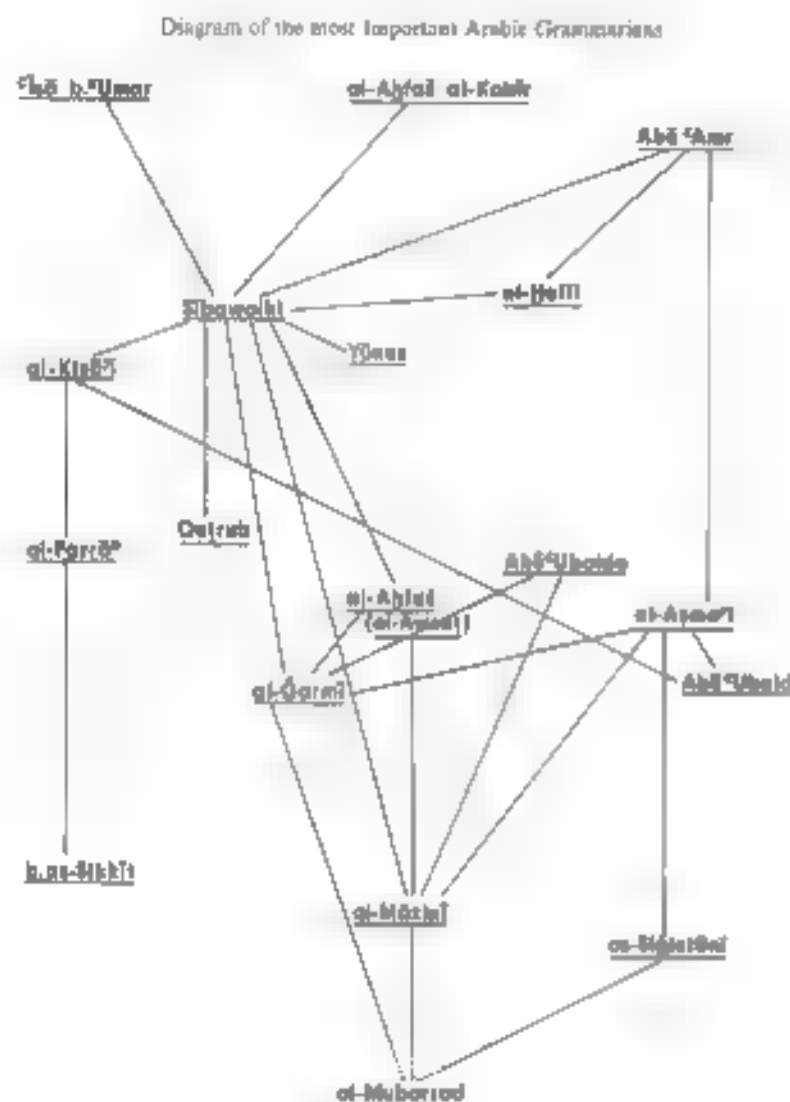

<sup>100</sup> b. Ḥazm, *Iḥk.* 3, 261, 9 [A 120]; on this passage, Arnaldez, 1956, 52, n. 2, 36. Arnaldez translates: 'Il est constant que pour l'impératif, son propre (*maḥṣūd*) est une signification (*ma'nā*) particularisée par une expression verbale (*lafz*) et son intention (*niyya*)', apparently reading *niyya* instead of *niyya*. We cannot agree with this translation, because Ibn Ḥazm speaks nowhere before in this chapter about the *niyya*, and because the combination *lafz wa-niyya* (or *lafz wa-huṣūl*) is a standard expression. What is more, we do not believe that Arnaldez' interpretation of *niyya* as 'intention significative' is correct. The term *niyya* is generally used with the sense of 'intention of the speaker' (Sib. K. 1, 123, 11; 1, 125, 13, 1, 126, 4; b. Ḥazm, *Iḥk.* 1, 409, 9, 1, 313, 14; b. Kalīl ap. Zūḡ. *Maḥ.* 320, 6; b. Anb. *Ins.* 36, 11, 198, 5; 299, 17, 267, 21), and never with the sense of 'objective grammatical meaning without correlation with the intention of the speaker'. (Only once have we found *niyya* at-kāfiya, b. Ḥazm, *Iḥk.* 2, 303, 10.) Another signification Zāḡ. *Id.* 103, 3: with the force of a vowel (*fi niyya kamilah*).

<sup>101</sup> Rāzi, *Maf.* 1, 24, 16: '... because the meaning *niyya* interpretation of the thing, hinted at by someone and intended by him' [A 121]. Cf. *ma'arad* (Zāḡ. *Lām.* 23, 10) and *ma'niyya* (b. Ḥazm, *Iḥk.* 2, 300, 1); *maḥṣūd* is used in this sense b. Anb. *Ins.* 48, 5; 54, 20; 63, 20; 139, 1; Zāḡ. *Id.* 134, 2. The first two of these synonyms are probably derivatives of *ma'nā*.

After the completion of my manuscript I received a copy of the *Essai* of dr. J. R. T. M. Peters, entitled *God's created speech. A study in the speculative thought of the Mu'tazilī Qāḍī I-Qāḍī Abū I-Ḥasan 'Abd al-Ḡabbār bn Ahmad al-Hamaḡānī* (diss. Nijmegen; Leiden, 1976). Peters analyses here for the first time in great detail the structure and terminology of 'Abd al-Ḡabbār's thought, especially in the seventh book of the *Mughl*. I will restrict myself to the enumeration of those passages that are of immediate interest for the subject of my study, without making any comments. The classification of sounds (*Mughl*, 7, 6, 16-7, 2; cf. below, pp. 32-3); Peters, 1976, 38-42; 295-9; (Peters proposes the same emendation *muḥṣūd* that I suggested, but he translates "fluent", "bound together"; cf. ib. 139, note 160; 296, *ibid.* 17); *ma'nā qā'im fi 'n-naḥṣ* (*Mughl*, 7, 14-20; cf. below, pp. 187-8); Peters, 1976, 308-12; *al-kalām fi'l al-muḥakallim* (*Mughl*, 7, 48 sqq.; cf. below, p. 152); Peters, 1976, 209-10. Peters' analysis of 'Abd al-Ḡabbār's *Mughl* is certainly of great importance for the study of the Arabic ideas concerning the nature of speech.

Finally I wish to refer to another book, which I regret not having been able to see, namely Troupeau's index to Sibawayhi (G. Troupeau, *Lexique-index du Kitāb Ṣ Sibawayhi*, Paris, 1976. Études Arabes et Islamiques, Série 3, Études et Documents, VII), which will prove to be a most useful instrument for the study of Arabic grammar.

### HEBREW AUTHORS QUOTED

- h. Qanāḥ, Qmuculeṣ = Ibn Qanāḥ, Abū l-Walīd Maṣwūd. *Qmuculeṣ et maris*. Ed. J. et H. Darroubourg. Paris, 1880 (Amsterdam, 1969).
- h. Qanāḥ, Šefer = Ibn Qanāḥ, Abū l-Walīd Maṣwūd. *Šefer ha-qanāḥ, Hebrew translation by Yehūshā ben Yibhān*. Ed. M. Wilanski (reprint Yerushalayim, n.d.).
- Kimhi, Mikhiel = David Kimhi, Mikhiel Tibbon W. Chomsky. New York, 1952.

### LATIN AUTHORS QUOTED

- Latin grammarians (except Charisius) quoted from *Grammatici Latini*, edited by H. Keil. Leipzig, 1855-80.
- August. dialect. = Augustinus, *De dialectica* (liber). Ed. J. Pinborg; trans. B. Durrill Jackson. Dordrecht/Boston, 1975 (= *Synthese Historical Library*, 16) (quotations are by chapter, page, and line in Crevelius' edition, S. Lucu, 1857).
- Char. ars. gramm. = Charisius, *Artes grammaticae* (liber V). Ed. C. Barwick. Leipzig, 1964.
- Quint. inst. orat. = Quintilianus, *Institutiones oratoriae libri prima capta de grammatica* (I, 4-8). Ed. M. Niedermann. Neuchâtel, 1947.
- Varro, De L.L. = Varro, *De Lingua Latina*. Ed. Iradik R. G. Keas. Cambridge (Mass.)/London, 1938.

### ORIGINALS OF THE ARABIC AND GREEK TEXTS QUOTED IN ENGLISH TRANSLATION

- ١ — هذه الصناعة تسمى باليونانية غوماطي وبالعربية النحو.
- ٢ — الكلام اسم وفعل وحرف، فالاسم ما انبأ عن الشيء، والفعل ما انبأ به، والحرف ما جاء لعنى.
- ٣ — واما الفعل فأمثلة أخذت من لفظ أحداث الأسماء ونبت لا مضي ولما يكون ولم يقع وما هو كائن لم ينقطع.
- ٤ — الرفع عند أصحاب المنطق من اليونانيين واو ناقصة وكذلك الضم وأخواته . . . . . والكر وأخواته عندهم باء ناقصة والفتح وأخواته عندهم ألف ناقصة، وان شئت قلت الواو المدودة الينة ضمة مشبعة والياء المدودة الينة كسرة مشبعة والألف المدودة فتحة مشبعة.
- ٥ — ألا ترى أن من متقدمي القوم من كان يسمى الضمة الواو الناقصة والكسرة الياء الصغيرة والفتحة الألف الصغيرة ؟
- ٦ — وسئل الخليل عن الرفع لم جعل للفاعل ؟ فقال : الرفع أول حركة، والفاعل أول متحرك، فجعلوا أول حركة لأول متحرك.
- ٧ — فأما مقابلة الألفاظ بما يشاكل أصواتها من الأحداث فباب عظيم واسع، . . . . . وذلك أنهم كثيراً ما يجعلون أصوات الحروف على سمت الأحداث المعبر بها عنها فيمدلون بها ويمتدونها عليها.
- ٨ — من ذلك قولهم : خضم، وقضم، فاختضم لأكل الرطب، . . . . . والقضم للصلب اليابس . . . . . فاختاروا الحاء لرخاوتها للرطب، واقتاف لصلابتها لليابس، حذوا لسجع الأصوات على محسوس الأحداث.
- ٩ — والأصل في هذا الباب أن جنس الصوت قد يختلف الوجه الذي يحدث عليه، فقد يكون صوتاً مفيداً غير مقطع، وقد يكون مقطعاً في جنس واحد، وقد يكون مقطع في جنس على وجه يتصل تارة

- ٢٠ - الاسم ما كان واقعا على معنى، نحو رجل و فرس وزيد وعمر و ما أشبه ذلك.
- ٢١ - الاسم ما سمي بمسماه وأوضحه وكشف بمعناه.
- ٢٢ - كل ما دخل عليه حرف من حروف الجر فهو اسم وإن أضح من ذلك للمعنى باسم.
- ٢٣ - المفردة منها ما هي ألقاب أعيان مثل زيد وعمر ومنها ما يدل على أجناس الأشياء وأنواعها مثل الإنسان والفرس والحيوان والبهائم والسواد.
- ٢٤ - الاسم ما دل على معنى وذلك المعنى يكون شخصا وغير شخص.
- ٢٥ - الأسماء ما أبانت عن الأشخاص، وتضمنت معانيها نحو رجل و فرس.
- ٢٦ - الاسم ما جاز فيه لفظي وضري - يعني ما جاز أن يخبر عنه.
- ٢٧ - إذا وجدت شيئا يحسن له الفعل والصفة نحو زيد قام وزيد قائم ثم وجدته بشئ ويجمع نحو قولك الزيداني والزيدوني ثم وجدته بمنتهى من التصريف فأعلم أنه اسم.
- ٢٨ - طعن قوم في قولهم « الاسم ما يصح الإخبار عنه » بأن قالوا : لفظه « أين وكيف وإذا » أسماء مع أنه لا يصح الإخبار عنه، وأجاب عبد القاهر النحوي عنه بأننا إذا قلنا « الاسم ما جاز الإخبار عنه » أردنا به ما جاز الإخبار عن معناه، ويصح الإخبار عن معنى « إذا » لأنك إذا قلت « أتيتك إذا طلعت الشمس »، كان المعنى « أتيتك وقت طلوع الشمس »، والوقت يصح الإخبار عنه، بدليل أنك تقول « طاب الوقت ».
- ٢٩ - الاسم في كلام العرب ما كان فاعلا أو مفعولا أو واقعا في حين الفاعل والمفعول به.
- ٣٠ - فالاسم ما جاز أن يكون فاعلا أو مفعولا.
- ٣١ - إن كل فاعل وكل مفعول فهو جسم.
- ٣٢ - ثم يعرف في أي حال يلحق كل واحد من الأسماء والكلم أي

- في الحوادث ويتفصل أخرى، وقد يحدث على وجه يكون حرفا وحروفا. وقد يحدث على وجه لا يوصف بذلك، كصريح الباب، وإن كان قد يكون من جنس بعض الحروف، وإنما تكشف الحروف بأن يحدث الصوت في بنية ومخارج مخصوصة، كبنية الفم وغيره.
- ١٠ - فذلك لا يوصف منطلق الطير كلاما، وإن كان قد يكون حرفين أو حروفا منظومة.
- ١١ - . . . لأنه لا يكون حروفا منظومة إلا وهي أصوات مقطعة.
- ١٢ - أما الكلام فكل لفظ مستقل بنفسه، مفيد لمعناه، وهو الذي يسميه النحويون الجمل نحو زيد أخوك، وقام محمد . . . وأما القول فأصله أنه كل لفظ يدل به اللسان، تاما كان أو ناقصا. فالتام هو المقيد، أعني الجملة . . . والناقص ما كان يفسد ذلك، نحو زيد، ومحمد، وإن . . . فكل كلام قول، وليس كل قول كلام.
- ١٣ - فالكلم اسم وفعل وحرف جاء لمعنى ليس باسم ولا فعل.
- ١٤ - وأما الفعل فأشقة أخذت من لفظ أحداث الأسماء وبنيت لما مضى ولا يكون ولم يقع وما هو كائن لم ينقطع.
- ١٥ - وليس باسم ولا فعل صفة لحرف لا لمعنى كما ظن بعضهم بدليل قوله في آخر الباب وليس باسم ولا فعل.
- ١٦ - ومن الألفاظ الدالة الألفاظ التي يسميها النحويون الحروف التي وضعت دالة على معان.
- ١٧ - وقد أكثر أهل العربية في هذا، وأقرب ما فيه ما قاله سيبويه، إنه الذي يفيد معنى ليس في اسم ولا فعل، هو قولنا « زيد منطلق » ثم نقول « هل زيد منطلق » فأندنا « بهل » ما لم يكن في « زيد » ولا « منطلق ».
- ١٨ - وإن سأل سائل فقال : لم قال وحرف جاء لمعنى وقد علمنا أن الأسماء والأفعال جنس لمعنى ؟ الخ.
- ١٩ - اللقب هو اسم طارئ على أمور لها اسم آخر.

الآن الذي هو النهاية والبدأ بعدا واحدا في الماضي والمستقبل  
وجمعا جميعا كان ذلك الزمان هو الزمان الحاضر.

٤٣ - وأما الفعل فأمثلة أخذت من لفظ أحداث الأسماء لا مضي ولا  
يكون ولم يقع وما هو كائن لم ينقطع، فلما بناء ما مضى فذهب  
وسمع ومكث وحوى، وأما بناء ما لم يقع فإنه قولك . . . خبرا  
يقتل ويذهب ويضرب ويقتل ويضرب، وكذلك بناء ما لم ينقطع  
وهو كائن إذا أخبرت.

٤٤ - وأما حال الكلمة المصرفة والقائمة، فهي أن القائمة في لغة  
اليونانيين هي ما يدل على الحاضر، والمصرفة ما يدل على أحد  
الزمانين.

٤٥ - . . . بين ما هي منها مصادر وهي التي منها تعمل الكلم  
ها ليس بمصادر وكيف تغير المصادر حتى تصير كلاما.

٤٦ - وبناء إفعالت من الخوة، . . . والمصدر منه إحواء - وقال  
بعض النحويين الأجود إحوواء، لأن الياء منقلبة عن ألف زائدة  
في إحواءت كما تنقلب في مؤثر - ولم يذكر هذا سيبويه. والفرق  
بينها أنها في المصدر بمنزلة الأصل غير منقلبة، لأن الفعل هو  
المأخوذ من المصدر.

٤٧ - فإن صناعة النحو مبنية على تمييز صواب الكلام من خطئه على  
مذاهب العرب بطريقي القياس الصحيح.

٤٨ - وأما الكتب التي ينحو بها نحو أصحاب التجارب فوجدت ثلاث  
مفالات منها . . . كتابه في التجربة الطيبة. هذا الكتاب بمقالة  
واحدة يقتصر فيها جميع أصحاب التجارب وأصحاب القياس بعضهم  
على بعض. وترجمته أنا منذ قريب إلى السريانية لبختيشوع.  
. . . ومنها كتابه في الخث على تعلم الطب. هذا الكتاب  
أيضا مقالة واحدة وتسخ فيه كتاب سينودوطي وهو كتاب حسن  
نافع ظريف. ترجمته أنا إلى السريانية لجبريل وترجمه إلى

طرف فيأتي أولا على إحصاء حال حال من أحوال الأسماء الموحدة  
للتصرف التي يلحقها مجال ما طرف من الأطراف ثم يعطي مثل  
ذلك في الأسماء المؤنثة والمثناة والمجموعة ثم يعطي مثل ذلك في  
الكلم الموحدة وفي المثناة والمجموعة إلى أن يستوعب الأحوال  
التي تتبدل بها على الكلم أطرافها التي جعلت لها ثم يعرف  
الأسماء تنصرف في بعض الأطراف وفي أيها تنصرف وفي أيها لا  
تنصرف ثم يعرف الأسماء التي كل واحد منها مبني على طرف  
واحد فقط وأبها مبني على أي طرف.

٣٣ - فاستنبطوا من مجاري كلامهم قوانين تلك الملكة مطردة شبه  
الكليات والقواعد يتيسرون عليها سائر أنواع الكلام ويلحقون  
الأشياء بالأشياء.

٣٤ - التصريف هو لفظ يزداد على الإسم بحركة على إستقامته . . .  
وأصناف التصاريف خمسة كما ذكرت في كتاب العبارة.

٣٥ - (الصرف) هو علم بأصول تعرف بها أحوال أبنية الكلم التي  
ليست بإعراب.

٣٦ - (الصرف) هو معرفة أصل الكلمة وزيادتها وحذفها وأبدالها.

٣٧ - الفعل ما أشتع من التثنية والجمع.

٣٨ - الفعل لا يؤنث وإنما يؤنث الإسم.

٣٩ - الفعل ما حسنت فيه التاء نحو قمت وذهبت.

٤٠ - الفعل ما حسن فيه أسس وغدا.

٤١ - والابتداء الإسم الذي هو الأول في المرتبة قبل كل عامل لفظي،  
وإنما قيل أول في المرتبة ليفرق بين ما هو أول في اللفظ وموضع  
التأخير، وبين ما هو أول يستحق التقديم، وإن كان مؤخرا في  
اللفظ على الإنشاع.

٤٢ - فإذا أخذ زمان له بعد محدود في الماضي من الآن الذي هو  
نهاية وبتدا، وجمع إلى مثله من المستقبل وكان بعدهما جميعا من

العربية حبشي لأحمد بن موسى . . . - ومنها كتابه في جمل التجربة. هذا الكتاب أيضا مقالة واحدة. ونسخته في كتبي ولم أتوجه.

٤٩ - ما إجماع الأطباء عليه وشهد له القياس وعنده التجربة فليكن إسلامك.

٥٠ - أحببت أن أعلم كيفية إدراك معرفة الطب ومأخذ أصله، أذلك بالحس أم بالقياس والسنة، أم يدرك بأوائل العقل، أم علم ذلك وطريقة يدرك عندكم من جهة السمع ؟ أبح.

٥١ - (القياس) عبارة عن تقدير الفرع بحكم الأصل.

٥٢ - (القياس) هو حمل لرح على أصل بطله يقتضي إجراء حكم الأصل على الفرع.

٥٣ - فأما من تكلم من العامة بالعربية بغير إعراب فيلهم عنه، فلا ذلك في المعارف الشهيرة والمنعمل المألوف بالدراسة. ولو إنتاج آدم إلى الايضاح عن معنى ملتبس بغيره من غير فهمه بالإعراب، لم يمكنه ذلك.

٥٤ - إن العرب نطقت على سميتها وطباعها. وعرفت مواعيد كلامهم، وقام في علوها عقله، وإن لم ينقل ذلك عنها، وإعنت أنا بما عندي أنه علة لما علة منه.

٥٥ - إجماع بين أحمد بن يحيى وبين هذا البصري.

٥٦ - وإنما نذكر هذه الأجوبة عن الكوفيين، على حسب ما سمعنا ما يصح به عنهم من ينصر مذهبهم من التأخرين، وعلى حسب ما في كتبهم إلا أن العبارة عن ذلك بغير ألفاظهم، والمعنى واحد. لأننا لو تكلفنا كتابة ألفاظهم بأعيانها لكان في نقل ذلك مشقة علينا من غير زيادة في الفائدة، بل لعل أكثر ألفاظهم لا يفهمها من لم ينظر في كتبهم.

٥٧ - وأنه رام نحو هؤلاء الكوفيين، وأنهم يحصلون على الرواية فإذا اختلفوا رجعوا إلى الكتب.

٥٨ - أعلم أن إنكار القياس في النحو لا يتحقق، لأن النحو كله قياس، . . . فمن أنكر القياس، فقد أنكر النحو . . . ولا يعلم أحد من العلماء أنكره.

٥٩ - . . . ولاي سبب نقل التعليم في أيام عمر بن عبد العزيز من الإسكندرية إلى أنطاكية ثم إنتقاله إلى حران في أيام التوكل وانتهى ذلك في أيام المتنصف إلى قويري ويوحنا بن حيلان وكانت وفاته بمدينة السلام في أيام المتندر أبح.

٦٠ - وزعم ناس يتوكل عن قبول أخبارهم أن الذين يسمون الفلاسفة قد كان لهم إعراب ومؤلفات نحو . . . قال أحمد بن فارس : وهذا كلام لا يبرج على مثله.

٦١ - « ومثال ذلك نحو ما فإنه في موضوع ما أي في النفس » نحو سبويه مثلا عند العرب وبوسيانس عند اليونانيين.

٦٢ - ومن الألفاظ الدالة الألفاظ التي يسميها النحويون الحروف التي وضعت دالة على معان، وهذه الحروف هي أيضا أصناف كثيرة، غير أن العادة لم تفر من إعراب علم النحو العربي إلى زماننا هذا بأن يفر لكل صنف منها إسم يخصه، فينبغي أن نتعمل في تعدد أصنافها الأساسي التي تادت إلينا عن أهل العلم بالنحو من أهل اللسان اليوناني فإنهم أوردوا كل صنف منها بكسب خاص.

٦٣ - ولجئ أيضا من الأمر العام الكلي أنه ليس أنه من الأمم أرق فطنة وأظهر حكمة من اليونانيين.

٦٤ - والنحو منطوق ولكنه مسلوخ عن العربية والمنطق نحو ولكنه مفهوم باللغة.

٦٥ - النحو منطوق عربي، والمنطق نحو عقلي، وجل نظر المنطقي في المعاني . . . وجل نظر النحوي في الألفاظ.

٦٦ - إلى أن قال فيما قال : « هذا والله العلم وما سواه ربح » . . . فإنه من يرى أن من سهر في اللغة يمكنه الجواب عن جميع ما يسأل عنه.

- ٢٧ - وليس هذا من ألفاظ النحويين ولا أوضاعهم، وإنما هو من كلام المتطهين وإن كان قد تعلق به جماعة من النحويين.
- ٢٨ - ليس الأمر كما ذهب إليه، ونسنا نقول: إن الأسماء قبل الأفعال مطلقاً، بل نقول إن الاسم قبل فعله الذي بفعله، وقد إصطلحننا على أن نريد بالاسم المسمى في هذا الفصل لأنه يتوهم عنه في الإخبار فنقول زيد سابق لفعله الذي بفعله، وليس يجب من هذا أن يكون سابقاً لفعل غيره، وإذا كان هذا كما ذكرنا فليس يجب أن يكون المصدر، إذا كان إسم لفعل، أن يكون سابقاً له، لأنه لا نطلق أيضاً أن يكون الاسم سابقاً للمسمى، ولا موجوداً بعده، بل إسمه لازم له موجود معه حين وجوده، وإنما نريد بالاسم معنى إستحقاقه للإسمية، ألا ترى أن شخصاً ما حين وجوده يجوز أن نسميه زيدا، ثم ننقله عنه فتسميه بكراً، ثم ننقله عنه لتسميه حملاً، واستحقاقه للإسمية لم ينتقل عنه وهو موجود بوجوده، ألا ترى أنه يقع عليه شيء ولا يفارقه، فهو شيء على كل الأحوال، ولذلك غلط قوم فتوهموا أن الاسم هو المسمى، وقد يسمى بعضهم المعلوم شيئاً، وأما آخرون . . . . . فإذا ثبت أن الاسم لا يسبق المسمى، فقد بطل احتجاجكم بسبق المصدر الفعل لأنه إسمه، وأنه واجب من ذلك أن يكون قبله سابقاً له.

- ٢٩ - كسر اب بفتح الطمان ماء حتى إذا جاء لم يجد شيئاً.
- ٣٠ - لا يمكن أن تكون جميع الماهيات سميات بالألفاظ، لأن الماهيات غير متناهية، وما لا نهاية له لا يكون مشعوراً به على التفصيل، وما لا يكون مشعوراً به امتنع وضع الاسم بازائه.
- ٣١ - والمصدر الجاري على فعلت التفعيل، وجاز فيه الفعل تشبيهاً بقولك دحرجته دحرجاً لأن فعلت في وزن فعلت في الحركات والسكون ففعل مصدره على بناء مصدره إذا واقفه في الوزن.

- ٣٢ - وأما الاسم فهو لفظة أو صوت مركب دالة أو دال، خلو من الزمان، جزء من أجزاء لا يدل على انفراده.
- ٣٣ - (الاسم) هو لفظة دالة بواطو مجردة من الزمان وليس واحد من أجزائها دال على انفراده.
- ٣٤ - الاسم صوت دال بتواطؤ مجرد عن الزمان والجزء من أجزائه لا يدل على انفراده ويدل على معنى محصل.
- ٣٥ - فالاسم كل لفظ مفرد يدل على معنى ولا يدل على زمانه المحدود كزيد وخالد.
- ٣٦ - وأما الاسم فهو صوت أو لفظة تدل بانفرادها على معنى خلو من الزمان ولا يدل جزؤه على جزء من المعنى إذا أفرد.
- ٣٧ - (الاسم بالمبطل) كل لفظ مفرد دال على المعنى من غير أن يدل بذاته على زمان المعنى.
- ٣٨ - الاسم صوت موضوع دال باتفاق على معنى غير مقرون بزمان.
- ٣٩ - الاسم صوت موضوع دال باتفاق على معنى بلا زمان، ولا يدل جزؤه على شيء من معناه.
- ٤٠ - كل شيء دل لفظه على معنى غير مقرون بزمان محصل من معنى أو غيره فهو اسم.
- ٤١ - (الاسم) كل لفظة دلت على معنى تحتها غير مقرون بزمان محصل.
- ٤٢ - (الاسم) كل لفظ مفرد يدل على معنى ويدل على زمانه المحدود.
- ٤٣ - الاسم ما دل على معنى في نفسه دلالة مجردة عن الاقتران.
- ٤٤ - وأما الكلمة فهي ما تدل مع ما تدل عليه على زمان وليس واحد من أجزائه يدل على انفراده وهو أيضاً دليل ما يقال على غيره.
- ٤٥ - (إن) الكلمة لفظة مفردة تدل على المعنى وعلى زمانه . . .
- ٤٦ - وأما الكلمة فهي صوت دال أو لفظة دالة تدل - مع ما تدل عليه - على الزمان جزء من أجزائه لا يدل على انفراده . . .
- ٤٧ - (الكلمة) هي لفظة مفردة تدل على معنى وعلى الزمان الذي ذلك المعنى موجود فيه.

- ٨٨ - (الفعل) ما دل على حدث، وزمان ماضٍ أو مستقبل  
٨٩ - الفعل ما دل على اقتران حدث بزمان.  
٩٠ - الفعل كلمة دالة على ثبوت المصدر لشيء غير معين في زمان معين.  
٩١ - الاسم لفظ دال على ماهية، والفعل لفظ دال على حصول الماهية بشيء من الأشياء في زمان معين.  
٩٢ - (وقال الكسائي والفرام وهشام) الاسم أخف من الفعل، لأن الاسم يستتر في الفعل، والفعل لا يستتر في الاسم.  
٩٣ - الفعل يمنع التلغظ به إلا عند الإسناد إلى الفاعل، . . . أما التلغظ الدال على ذلك الفاعل فقد يجوز التلغظ به من غير أن يستند إليه الفعل.  
٩٤ - والكلام بفعله المتكلم وبوجوده بعد أن لم يكن، فهو فعل من أفعاله.  
٩٥ - (كان آله) متكلما بكلام يخلقه في محل وحقيقة الكلام . . . .  
أصوات مقطعة وحروف مطلوبة والمتكلم من فعل الكلام لا من قام به الكلام.  
٩٦ - فصل في أن حقيقة المتكلم أنه وجد الكلام من جهته ويحسب قصده وإرادته.  
٩٧ - والقراءة عندهم والتلاوة والكتابة مخلوقة، والقرآن صفة قائمة في نفس المتكلم، لا يظهر لإحساس الكلفين، وإنما الأصوات والحروف حكايتها.  
٩٨ - ألا ترى أن المتكلم منا إذا استعمل هذه الصفة بكونه متكلما لا بغيره، لا لأنه أحدث في آلة نطقه، وإن كان لا يكون متكلما حتى يترك به آلات نطقه ؟  
٩٩ - فليس ما يقوله أهل العربية، من أن الكلام إسم وفعل وحرف جاء لعني، بقادح فيما قلناه، لأنهم تصدوا إلى الكلام الذي حددناه فصنفوه أمثاقا، ولم يدفعوا كون جميعه حروفا مطلوبة نظاما مخصوصا.

- ١٠٠ - أما مذهب أهل الحق، فإن هذه الأصوات إنما هي من فعل الله تعالى، وإنما تنسب إلى الإنسان كما ينسب إليه مائر إفعاله الاختيارية.  
١٠١ - فمنهم من يقول : الاسم هو التسمية وهو مذهب المعتزلة والشيعة وكثير من الفقهاء، ومنهم من يقول : الاسم هو المسمى، وهو مذهب الأشعرية.  
١٠٢ - فإنه من كلام العامة وتعلق الأشياء، لأن القول « نار » والقول « زيد » الوجودين في الفهم ليس باسم زيد واسم النار، وإنما هو تسمية ودلالة على الاسم - فسقط ما قالوه.  
١٠٣ - ويجوز أن يكون ألقام الأسماء مقام التسميات بها في الإخبار عنها، إذ كان لا يتوصل إليها إلا بها كما ذكرنا.  
١٠٤ - الإشتقاق أخذ صيغة من أخرى مع اتفائها معنى ومادة أصلية وهبة تركيب لها ليدل بالثانية على معنى الأصل بزيادة مفيدة لأجلها اختلفوا حروفا أو هيئة.  
١٠٥ - لكن القوم بحسبهم وزنوا كلام العرب فوجدوه ضربين، أحدهما ما لا بد من قبله كهيئته، لا بوصية له، ولا تنبيه عليه، نحو حجر ودار . . . ومنه ما وجدوه يتدرك بالقياس.  
١٠٦ - أعلم أن الألفاظ في الأغلب عبارات دالة على أمور هي : أما الألفاظ أو غيرها، أما الألفاظ فهي كالإسم والفعل والحرف، فإن هذه الألفاظ الثلاثة يدل كل واحد منها على شيء هو في نفسه لفظ مخصوص، وغير الألفاظ كالحجر والسماء والأرض.  
١٠٧ - فنقول : الألفاظ عبارة عن الحروف المقطعة الموضوع بالاختيار الإنساني للدلالة على أعيان الأشياء، وهي منقسمة إلى ما موضوع أولا، وإلى ما هو موضوع ثانيا، وأما الموضوع أولا فكتولك سماء وشجر وإنسان وغير ذلك، وأما الموضوع ثانيا، فكتولك كل إسم وفعل وحرف وأسر ونهي ومضارع.  
١٠٨ - وقولنا التي في الوضع الأول لفصل بينها وبين الألفاظ التي في الوضع الثاني لأن الألفاظ التي في الوضع الأول هي الأسماء . .

١١٦ — فإن قال : إن الذي أشير إليه هو الفكر والنظر، لأن ذلك هو الكلام وما سمع يدل عليه، قيل له : إن كنت إنى هذا أشرت فقد أخطأت في العبارة، وأنت سعيب في المعنى، وسيبك سيل من إدمى أن الحركة معنى في النفس وأشار إلى الإرادة. وقد علمنا أن الفكر لا نسبة بينه وبين العبارات، فكيف يقال أنها دلالة عليه ؟

١١٧ — والأثار التي في النفس مثالات للمعاني الموجودة خارج النفس.

١١٨ — وقد سمى بعضهم أيضا العطل معان، وهذا من عظيم شغبهم وقاسد متعلقهم وإنّ المعنى تفسير اللفظ.

١١٩ — وأما المعنى فهو الشيء الذي تدركه النفس من المحسوس من غير أن تدركه الحس الظاهر أولا.

١٢٠ — وصح أن الأمر مراد به معنى يختص بلفظه وبنيته.

١٢١ — لأن المعنى عبارة عن الشيء الذي عنه الداعي وقصد المقاصد

التي أوقعت أولا على الأمور وصيرت سمات وعلامات تدل عليها دلالة جملة مثل تسيتا هذا فصة وهذا نحاس وهذا ذهب وبالجملة كل الألفاظ التي يشار بها إلى معنى مفرد. والألفاظ التي في الوضع الثاني هي الألفاظ التي تدل على ما يميزناه من الألفاظ التي في الوضع الأول مثل أنا سمينا كل لفظ دال على معنى محصل مجرد من الزمان . . . وكلما يدل معنا يدل عليه على زمان كلمة . . . فهذه الألفاظ التي في الوضع الثاني وذلك أن بعد وجود تلك وضعنا هذه.

١٠٩ — ثم لحص بعد ذلك هل تلك الصناعة هي صناعة علم اللسان وهل إذا أحاط الإنسان بالأسماء الدالة على المعاني على حسب دلالتها عند جمهور تلك الأمة التي لها ذلك اللسان ولحاص عنها وعرفها على طريق أهل العلم باللسان يكون قد أحاط علما بجمهور الأشياء.

١١٠ — واختلفوا بأن العلم بالصفة إذا كان ضروريا كان العلم بالموصوف أيضا ضروريا، فلو خلق الله تعالى العلم في قلب العاقل بأنه وضع هذا اللفظة لهذا المعنى لزم أن يكون العلم بالله ضروريا وذلك يفتدح في محمة التكليف.

١١١ — الاسم سمعة توضع على الشيء يعرف بها.

١١٢ — الاسم وسم وسمعة توضع على الشيء تعرف به.

١١٣ — وذلك كأن يمتنع حكيمان أو ثلاثة فصاعدا، فيحتاجوا إلى الإبانة عن الأشياء المعلومة، فيضعوا لكل واحد منها سمعة ولفظا، إذا ذكر حرف به ما ساء، ليعتاز من غيره، وليخفى بذكره عن إحضاره إلى سواة العين.

١١٤ — وكيف يصح أن يقال : إن فلانا يتكلم من غير فكر، إن كان الكلام هو الفكر ؟

١١٥ — إن المبادر أجناس للمعاني كما غيرها أجناس للأعيان، فهو رجل وفرس وغلّام ودار وستان . . .

1. Τῆς δὲ διαλεκτικῆς θεωρίας συμφώνως δοκεῖ τοῖς πλείστοις ἀπὸ τοῦ περὶ τῆς φωνῆς ἐνάρχεσθαι τόπου.
2. Οὗτω δὲ ἴσως καὶ ὁ ἐπιστάμενος περὶ ὀνομάτων τὴν δυνάμιν αὐτῶν σκοπεῖ, καὶ οὐκ ἐκπλήττεται εἰ τι πρόσκειται γράμμα ἢ μετέκειται ἢ ἀφῆρηται, ἢ καὶ ἐν ἄλλοις παντάπασιν γράμμασιν ἔστιν ἡ τοῦ ὀνόματος δύναμις.
3. Λιμός, ἡ λείψις τῶν ἐκτελεσθέντων. Γίνεται παρὰ τὸ λείπειν, λείψω λιμός· καὶ ὥφειλε διὰ διφθόγγου γράφεσθαι, ἀλλὰ συντέλειον ἢ φωνὴ τῇ σημαινόμενῃ, ἐπειδὴ γὰρ ἔνδοξαν θελοῖ, τοῦτω χάριν καὶ ἔνδοξαν φωνήεντος ἀνεδέξατο, ὥς Τρύφων.
4. ... ὥσπερ ὁ ἐποιοῦν πλέον ἔχει τοῦ παρεχόμενου πρὸς τὸν ποιῶν...
5. Ἔστι δὲ φωνὴ ἀπὸ πεπληγμένος ἢ τὸ ἴδιον αἰσθητὸν ἀκοῆς, ὥς φησὶ Διογένης ὁ Βαβυλώνιος ἐν τῇ περὶ τῆς φωνῆς τέχνῃ.
6. ... καὶ ζῶον μὲν ἔστι φωνὴ ἀπὸ ὀρυμνίας πεπληγμένος, ἀνθρώπου δὲ ἔστιν ἐναρθρός καὶ ἀπὸ διανοίας ἐκπεπονημένος, ὥς ὁ Διογένης φησὶν.
7. Λέξις δὲ ἔστι κατὰ τοὺς Στωικούς, ὥς φησὶν ὁ Διογένης, φωνὴ ἐγγράμματος, οἷον «ἡμέρα». Λόγος δὲ ἔστι φωνὴ σημαντικὴ ἀπὸ διανοίας ἐκπεπονημένη, οἷον «ἡμέρα ἔστι»... διαφέρει δὲ φωνὴ καὶ λέξις, ὅτι φωνὴ μὲν καὶ ὁ ἦχος ἔστι, λέξις δὲ τὸ ἐναρθρον μόνον. Λέξις δὲ λόγου διαφέρει, ὅτι λόγος αἰσθητικός ἐστι, λέξις δὲ καὶ ἀσπῆμαντος, ὥς ἡ «βλίτυρι», λόγος δὲ οὐδαμῶς.
8. Ἰστέον δὲ ὅτι τῶν φωνῶν αἱ μὲν εἰσιν ἐναρθροὶ καὶ ἐγγράμματοι, ὥς αἱ ἡμέτεραι, αἱ δὲ ἀναρθροὶ καὶ ἀγράμματοι, ὥς ὁ ἦχος τοῦ πυρός καὶ ὁ κτύπος τοῦ λίθου ἢ τοῦ ξύλου, αἱ δὲ ἀναρθροὶ μὲν, ἐγγράμματοι δὲ, οἷον αἱ μιμήσεις τῶν ἀλόγων ζῴων, ὥς τὸ βρῆκεκέξ καὶ τὸ κοῖ (ἢ φωνὴ τοῦ χοίρου)· αὕτη γὰρ ἡ φωνὴ ἀναρθρὸς μὲν, καθὼ οὐκ ἴσμεν τί σημαίνει, ἐγγράμματος δὲ, καθὼ δύναται γραφῆναι, αἱ δὲ ἐναρθροὶ μὲν, ἀγράμματοι δὲ, ὥς ἐπὶ τοῦ συρισμοῦ· αὕτη γὰρ ἡ φωνὴ ἐναρθρὸς μὲν, καθὼ ἴσμεν τί σημαίνει, οἷον «ῥαίσιζον» ἢ ἄρα πιφαύσκων Διομήδεϊ δῖον, ἀγράμματος δὲ ἔστι, καθὼ οὐ δύναται γραφῆναι.
9. Συμβῆσται γὰρ τὴν μὲν εἶναι φωνὴν σημαντικὴν καὶ ἐγγράμματον, ὥς τὴν ἀνθρώπου, τὴν δὲ σημαντικὴν καὶ ἀγράμματον, ὥς τὴν κυνὸς ὕλακην, τὴν δὲ ἀσπῆμον καὶ ἐγγράμματον, ὥς τὴν βλίτυρι, τὴν δὲ ἀσπῆμον καὶ ἀγράμματον, ὥς τὸν μῶτην καὶ οὐ

τοῦ σπῆναι τι χάριν γινόμενον συρισμὸν ἢ τὴν φωνῆς κυνὸς τῶν ἀλόγων ζῴων μίμησιν.

10. Λέγω δ' ὅτι προσσημαίνει χρόνον, οἷον ὕγεια μὲν ὄνομα, τὸ δ' ὕγιαινει ῥῆμα· προσσημαίνει γὰρ τὸ νῦν ἐκάρχειν. Καὶ αἱ τῶν ὑπαρχόντων σημεῖα ἔστιν, οἷον τὸν κατ' ὑποκειμένου.
11. Λεκτέον οὖν ὡς παντὸς μέρους τὰ ἴδια δεῖ σκοπεῖν καὶ οὐ τὰ παρεκόμενα, καὶ οὕτως ποιεῖσθαι τὸν μερισμὸν.
12. Ἐπίθετον δὲ ἔστι τὸ ἐπὶ κυρίων ἢ προσηγορικῶν ὀμωνύμων τιθέντων κατὰ θελοῦν ἑπαινον ἢ ψόγον.
13. Ἀρθρον δὲ ἐπὶ στοιχείῳ λόγου πτωτικόν, διορίζον τὰ γένη τῶν ὀνομάτων καὶ τοὺς ἀριθμούς, οἷον αὐ, ἡ, τὸ, αἰ, αἱ, τὰ.
14. Ἔστι δὲ προσηγορία μὲν, κατὰ τὸν Διογένην, μέρος λόγου σημαίνον κοινὴν ποιότητα, οἷον «ἄνθρωπος», «ἵππος». Ὄνομα δὲ ἔστι μέρος λόγου θελοῦν ἴδιαν ποιότητα, οἷον «Διογένης», «Σωκράτης».
15. Ἐάν γὰρ ἀποδιδῷ τις τὴν πρώτην οὐσίαν τί ἔστι, γνωριμώτερον καὶ οἰκειότερον ἀποδώσει τὸ εἶδος ἀποδιδούς ἢ τὸ γένος οἷον τὸν τινα ἄνθρωπον γνωριμώτερον ἢν ἀποδοῖη ἄνθρωπον ἀποδιδούς ἢ ζῶον· τὸ μὲν γὰρ ἴδιον μᾶλλον τοῦ τινὸς ἀνθρώπου, τὸ δὲ κοινώτερον.
16. Ἐπὶ δὲ ἔστι τὰ μὲν καθόλου τῶν πραγμάτων, τὰ δὲ κατ' ἕκαστον — λέγω δὲ καθόλου μὲν ὅ ἐπὶ πλείονων πέφυκε κατηγορεῖσθαι, κατ' ἕκαστον δὲ ὁ μὴ, οἷον ἄνθρωπος μὲν τῶν καθόλου, Καλλίας δὲ τῶν κατ' ἕκαστον — ἀνάγκη δ' ἀποφαίνεσθαι ὡς ὑπάρχει τι ἢ μὴ.
17. Ὄνομα ἔστι μέρος λόγου πτωτικόν, ἕκαστον τῶν ὑποκειμένων σωμάτων ἢ πραγμάτων κοινὴν ἢ ἴδιαν οὐσίαν ἀπονέμον.
18. Ὄνομα ἔστι μέρος λόγου πτωτικόν... κοινῶς τε καὶ ἰδίως λεγόμενον· κοινῶς μὲν οἷον «ἄνθρωπος», «ἵππος», ἰδίως δὲ οἷον «Σωκράτης».
19. Τοῦ δὲ ὀνόματος διαθέσεις εἰσὶ δύο, ἐνέργεια καὶ πάθος, ἐνέργεια μὲν ὡς κριτής ὁ κρίνων, πάθος δὲ ὡς κριτός ὁ κρινόμενος.
20. Πάντας γὰρ ἡ οὐσία ἐστὶν ἢ ἐνεργουσα τι ἢ πάσχουσα, τὸ δὲ ῥῆμα σημαίνει τὴν πράξιν καὶ τὸ πάθος.
21. Καὶ τοῦ ῥήματος δὲ ἀναγκαίως πρόκειται τὸ ὄνομα, ἐπεὶ τὸ διατιθέναι καὶ τὸ διατίθεσθαι σώματος ἴδιον, τοῖς δὲ σώμασιν ἐπίκειται ἡ θέσις τῶν ὀνομάτων, ἐξ ἧν ἡ ἰδιότης τοῦ ῥήματος, λέγω τὴν ἐνέργειαν καὶ τὸ πάθος.

22. Τὸ μὲν ἐπὶ ταῖς πράξεσιν ὃν δῆλωμα ῥήματι που λέγομεν... τὸ δὲ γ' ἐπ' αὐτοῖς τοῖς ἐκείνας πράττουσι σημεῖον τῆς φωνῆς ἐπιτεθέν ὄνομα.
23. Θέλουσι μὲν γὰρ καθολικῶς τινα θεωρήματα συστησόμενοι ἀπὸ τούτων πάντα τὰ κατὰ μέρος κρίνειν ὀνόματα, εἴτε ἑλληνικὰ ἔστιν εἴτε καὶ μὴ κτλ.
24. Ἑλληνισμός μὲν οὖν ἐστὶ φράσις ἀδιέπτωτος ἐν τῇ τεχνικῇ καὶ μὴ εἰκαλᾷ συνηθείᾳ.
25. Τί διαφέρει τὸ μονόπρωτον τοῦ ἀκλίτου; Διαφέρει ὅτι τὸ μονόπρωτον ἄρθρον μόνον ἐπιδέχεται, ὥς τὸ «Ἀβραάμ», ἀκλίτον δὲ ἐστὶ τὸ μὴτε ἐπιδεχόμενον, μῆτε ὅλως κλινόμενον, οἷον τὸ «ῥῶς», τὸ «ἄνωγας».
26. Ῥήματι ἔστι λέξις ἀπείρατος ἐπιδεκτικὴ χρόνων τε καὶ προσώπων καὶ ἀριθμῶν, ἐνέργειαν ἢ πάθος παριστάσα.
27. Ἡ δὲ πρῶτον λόγον οἱ παλαιοὶ, τὴν τότε καλουμένην πρόωσιν, νῦν ἀξίωμα, προσηγόρευον, ὃ πρῶτον λέγοντες ἢ ἀληθεύουσιν ἢ ψεύδονται. Τοῦτο δὲ ἐξ ὀνόματος καὶ ὀνόματος συντέστηκεν, ὃν τὸ μὲν πρῶτον οἱ διαλεκτικοὶ τὸ ἑκτὸν κατηγόρημα κατανοοῦν.
28. Ἐστὶ δὲ τὸ κατηγόρημα τὸ κατὰ τινος ἀγορευόμενον, ἢ πρῶτον συντακτὸν περὶ τινος ἢ τινῶν, ..., ἢ λεκτὸν ἐλλειπὲς συντακτὸν ὁρθῇ πρὸς ἀξίωματος γένεσιν.
29. Μὴ νόμιζε δὲ ὅτι ἐν τῇ συνθέσει τοῦ λόγου πρῶτον ἐξ ἀνάγκης κεῖται τὸ ὄνομα, δευτέρον τὸ ῥήμα, εἴτε τὸδε ἢ ἐκεῖνο, ἀλλ' ὥς τύχη συντίθεται... καίτοι ἐχρὴν φυσικῶς προτάττεσθαι μὲν τὸ ὄνομα ὥς οὐσίαν, μετέπεσθαι δὲ τὸ ῥήμα ὥς συμβεβηκός, ὑποτάττεσθαι δὲ τὰ λοιπὰ.
30. Φασὶ δὲ ὥς εἰς χρονικὰ διαστήματα διεῖλε τοὺς χρόνους ὁ Διονύσιος ὥς εἰ τις εἰς ἐνιαυτὸν καὶ μῆνα καὶ ἡμέραν καὶ ὥραν τέμνει τοὺς χρόνους. Καὶ διὰ τοῦτο ἐνεστώτα φησιν, ἦτοι ὥς πρὸς μῆκος ἐνιαυτοῦ ἢ μηνός ἢ ἡμέρας ἢ ὥρας, καὶ γὰρ φασιν ἐνεστώτα ἐνιαυτὸν καὶ μῆνα καὶ ἡμέραν καὶ ὥραν.
31. Πρῶτος ὁ ἐνεστώς, δεύτερος ὁ παρεληλυθός, τρίτος ὁ μέλλων. Ἀλλ' ὁφείλει, φασὶ τινες, ὁ μέλλων πάντων προτάττεσθαι, πρῶτον γὰρ μέλλει τι γίνεσθαι, εἴτα γίνεται, καὶ οὕτως οἴχεται. Ἀλλοὶ δὲ τὸν παρεληλυθότα μέλλον, ἐπειδὴ τὸ παρελθόντι τῶν ἐνεστώτων πρότερον... Καθ' ἑτέρους μέντοι γε λόγοις προτέτακται ὁ ἐνεστώς ὥς ὁρατός καὶ φανερός.
32. Ἰστέον ὅτι τὰ ἀπαρέμφατα δευτέραν ἔχουσι τάξιν, καὶ τοῦτο εὐλόγως, εἰ γε καὶ πρῶτην ὁφείλων ἐπ' ἔχειν τάξιν, ὥς ὅντα

- ἀρχαὶ καὶ οἶοναί ῥίξαι τῶν ῥημάτων· ἐξ αὐτῆς γὰρ τῆς ἀκαρεμψάτου γίνονται πᾶσαι αἱ ἐγκλίσεις καὶ εἰς αὐτὴν ἀναλύονται.
33. Καθὼς ἔφαμεν, ἐστὶν γενικωτάτη ἡ τῶν ἀπαρεμψάτων ἐγκλισις, ἀναγκαστὴς λείπουσα τοῖς προδιαπορηθεῖσι, τοῖς προσώποις καὶ τῷ καρεπομένῳ ἀριθμῷ, ὅς οὐ φύσει παρέπεται τῷ ῥήματι, παρακολοῦθημα. Ὡς γίνεται προσώπων τῶν μετεληφότεων τοῦ πράγματος. Αὐτὸ γὰρ τὸ πρῶτον ἐν ἐστὶν, τὸ γράφειν, τὸ περιπατεῖν, ὅπερ ἐγγινόμενον ἐν προσώποις ποιεῖ τὸ περιπατῶν, τὸ περιπατοῦμεν, τὸ περιπατοῦσιν.
34. Τοῖς ῥήματιν ἐξαιρέτως παρέπεται ἡ ψυχικὴ διάθεσις, ὅπερ οὐ σύνεστι τοῖς ἀκαρεμψάτοις, καὶ τὸ ἐν ἀριθμοῖς καὶ προσώποις καταγίνεσθαι, ὃν τῆς διαφορᾶς οὐκ ἔτιχεν τὸ ἀπαρέμφατον, καθὼς ἢ... μετοχὴ στερουμένη τῶν προκτιμένων καὶ τῆς τῶν ῥημάτων ἰδέας ἀπεβλήθη.
35. Τινὲς δὲ ἤξιον προτάσσειν τὴν ἀπαρέμφατον λέγοντες, ὅτι ὅλη τις ἐστὶ καὶ ἀρχὴ τῶν ῥημάτων· ἐντεθὲν οὐδὲ βούλησιν ψυχῆς οὐδὲ πρόσωπον οὐδὲ ἀριθμὸς ἐμφανίει· αἱ γὰρ ἀρχαὶ ἀπλᾶς τυγχάνουσιν, ὥς τὰ τέσσαρα στοιχεῖα πρὸς τὰ σώματα, καὶ τὰ εἰκοσιτέσσαρα πρὸς τὰ ὀνόματα, καὶ ἀπλῶς ἀναίθεος καὶ ἀσχημάτιστος πρὸς τὰ ἑαυτοῦ εἰδοποιούμενα σκεῦη.
36. Εἰ μὴ ἱστοροί ἦσαν, οὐδὲν ἐν ἡν τῶν γραμματικῶν μαρώτερον...
37. (Γραμματικὴ ἐστὶν) ἐμπειρία τῶν περὶ ποιηταῖς τε καὶ συγγραφεῖσιν ὥς ἐπὶ τὸ πάλαι λεγομένων.
38. Ὅρας ἐστὶ λόγος σύντομος, δηλωτικὸς τῆς φύσεως τοῦ ὑποκειμένου πράγματος.
39. Τέχνη ἐστὶ σύστημα ἐκ καταλήψεων ἐμπειρίας ἐγγεγυμνασμένων πρὸς τὸ τέλος οὐχρηστον τῶν ἐν τῷ βίῳ.
40. Ἐμοὶ γὰρ δοκεῖ ὅτι ὃν τις τῇ θῆται ὄνομα, τοῦτο εἶναι τὸ ὁρθόν, καὶ ὃν αὐτὸς γε ἕτερον μεταθῆται, ἐκεῖνο δὲ μηκέτι καλῶν, οὐδὲν ἦτιον τὸ ὑπερὸν ὁρθὸς ἔχειν τοῦ προτέρου.
41. Ὅνομα δὲ ἐστὶ φωνὴ συνθετὴ σημαντικὴ ἀνευ χρόνου ἢς μέρος οὐδὲν ἐστὶ καθ' αὐτὸ σημαντικόν· ἐν γὰρ τοῖς διπλοῖς οὐ χρόμιστα ὥς καὶ αὐτὸ καθ' αὐτὸ σημαίνει, οἷον ἐν τῷ Θεοδώρῳ τὸ δῶρον οὐ σημαίνει.
42. Ὅνομα μὲν οὖν ἐστὶ φωνὴ σημαντικὴ κατὰ συνθήκην ἀνευ χρόνου, ἢς μηδὲν μέρος ἐπὶ σημαντικὸν περιαρισμένον· ἐν γὰρ τῷ Καλλιπῶς τὸ ἱερός οὐδὲν καθ' αὐτὸ σημαίνει, ὅπερ ἐν τῷ λόγῳ τῷ καλὸς ἱερός.
43. Τῶν λεγομένων τὰ μὲν κατὰ συμπλοκὴν λέγεται, τὰ δὲ ἀνευ συμπλοκῆς. Τὰ μὲν οὖν κατὰ συμπλοκὴν, οἷον ἄνθρωπος τρέχει,

- άνθρωπος νικῇ, τὰ δὲ ἄνευ συμπλοκῆς, οἷον ἄνθρωπος, βοῦς, τρέχει, νικῇ.
44. Τὸ δ' οὐκ ἄνθρωπος οὐκ ὄνομα, οὐ μὲν οὐδὲ κεῖται ὄνομα ὃ τι δεῖ καλεῖν αὐτό — οὔτε γὰρ λόγος οὔτε ἀπόφασις ἐστίν —, ἀλλ' ἐστὶ ὄνομα ἄοριστον.
45. Ῥῆμα δὲ ἐστὶ τὸ προσσημαίνον χρόνον, οὐ μέρος οὐδὲν σημαίνει χωρὶς· ἐστὶ δὲ τῶν καθ' ἑτέρον λεγομένων σημείον.
46. Ῥῆμα δὲ φωνὴ συνθετὴ σημαντικὴ μετὰ χρόνου ἥς οὐδὲν μέρος σημαίνει καθ' αὐτό....
47. Ῥῆμά ἐστι λέξις ἀπώτερος ἀπαδεικτικὴ χρόνων ■ καὶ προσώπων καὶ ἀριθμῶν, ἐνέργειαν ἢ πάθος παριστάσα.
48. Τῶν δὲ λεκτῶν τὰ μὲν λέγουσιν εἶναι αὐτοτελῆ οἱ Στωϊκοί, τὰ δὲ ἐλλιπῆ. Ἐλλιπῆ μὲν οὖν ἐστὶ τὸ ἀναπάρειστον ἔχοντα τὴν ἐκφορᾶν, οἷον «γράφει», ἐπιζητούμεν γὰρ «τίς».
49. ἔχει δὲ τὸ ῥῆμα καὶ πλεον τι τοῦ ὀνόματος. Τὸ μὲν γὰρ ὄνομα σημαίνει πρᾶγμα τι μόνον, τὸ δὲ ῥῆμα καὶ τι πλεον, οἷον τὸ «λέγω» σημαίνει καὶ αὐτὴν τὴν ἐνέργειαν ὅτι λέγω, σημαίνει δὲ πλεον καὶ τὸν χρόνον.
50. Ἀποφαντικός δὲ οἷ πάς (sc. λόγος), ἀλλ' ἐν ■ τὸ ἀληθεύειν ■ ψεύδεσθαι ὑπάρχει· οὐκ ἔν ἄπεισι δὲ ὑπάρχει, οἷον ἡ εὐχὴ λόγος μὲν, ἀλλ' οὐτ' ἀληθὴς οὔτε ψευδής....
51. Ἐνθὲν μοι δοκοῦσιν κινήσας ἀναστρέφειν οἱ ἐπιζητούντες διὰ τί ἐλλείπει προσώποις καὶ ἀριθμοῖς καὶ ἐτι ψυχικῇ διαθήσει, εἴγε οὐ πληθύνεται ὅτι ■ πρᾶγμα ἐν ἐστίν. — εἴγε οὐκ ἔχει ψυχικὴν διαθήσιν, ὅτι μὴδὲ εἰς πρόσωπα ἀνακυκλήθη. ὅπερ ἔμψυχα ὄντα τὴν ἐν αὐτοῖς διαθήσιν τῆς ψυχῆς ἐπαγγέλλεται· φασὶ δυνάμει αὐτὸ τὸ ῥῆμα οἷτε πρόσωπα ἐπιδέχεται οὔτε ἀριθμούς, ἀλλ' ἐγγενόμενον ἐν προσώποις τότε καὶ τὰ πρόσωπα διέσπειλεν, ὄντα λοιπὸν ἢ ἐνικά ἢ δουκά ἢ κληθοντικά. Προδικτον δὲ ὅτι οὐδὲ ψυχικὴν διαθήσιν καθὼς προείπομεν.
52. Ὅστις οὐ περὶ παντός λόγον ἐκεῖ διαλαμβάνει, οὔτε περὶ τοῦ εὐκταικοῦ, οὔτε περὶ τοῦ προστακτικοῦ, οὔτε ἄλλου τινός ἦτοι τῶν πέντε κατὰ τοὺς Περιπατητικούς ἢ τῶν δέκα κατὰ τοὺς Στωϊκοὺς πλὴν τοῦ ἀποφαντικοῦ.
53. Ἐπεὶ γὰρ οὐκ ἐστὶν αὐτὰ τὰ πράγματα διαλύεσθαι φέροντας, ἀλλὰ τοῖς ὀνόμασιν ἀντὶ τῶν πραγμάτων χρόνισμα συμβόλοις, τὸ συμβαίνειν ἐπὶ τῶν ὀνομάτων καὶ ἐπὶ τῶν πραγμάτων ἡγησόμεθα συμβαίνειν, καθάπερ ἐπὶ τῶν ψήφων τοῖς λογίζομένοις. Τὸ δ' οὐκ ἐστὶν ὁμοιον· τὰ μὲν γὰρ ὀνόματα πεπερανται καὶ τὸ τῶν λόγων

- πληθος, τὰ δὲ πράγματα τὸν ἀριθμὸν ἀπειρά ἐστιν. Ἀναγκαῖον οὖν πλείω τὸν πῶτον λόγον καὶ τοῦτομα τὸ ἐν σημαίνειν.
54. ... καὶ δὴ καὶ τὸ περὶ τῶν ὀνομάτων οὐ συμκρὸν ταχάνει ὃν μᾶθημα.
55. ... ὅτι τὰ φύσει τετραχῆς· ἡ γὰρ ὥς αἱ τῶν ζῴων καὶ φυτῶν οὐσίαι ὄλαι τε καὶ τὰ μέρη αὐτῶν, ἡ αἱ τοῦτων ἐνέργειαι καὶ δυνάμεις, ὥς ἡ τοῦ πυρὸς κρυφότης καὶ θερμότης, ἡ ὥς αἱ σκίαι καὶ αἱ ἑμφάσεις ἐν τοῖς κατόπτροις, ἡ ὥς αἱ τεχνηταὶ εἰκόνας ἐοικυῖαι τοῖς ἀρχαίοις ταυτῶν κτλ.
56. ... καὶ Κρατίλος ἀληθῆ λέγει λέγων φύσει τὰ ὀνόματα εἶναι τοῖς πράγμασι, καὶ οὐ πάντα δημιουργὸν ὀνομάτων εἶναι, ἀλλὰ μόνον ἑαίνον τὸν ἀποβλέποντα εἰς τὸ τῇ φύσει ὄνομα ὃν ἐκαστὸν καὶ διυτόμενον αὐτοῦ τὸ εἶδος τιθέναι εἰς τε τὰ γράμματα καὶ τὰς συλλαβὰς.
57. ... τὸν συλλογισμὸν, ὃν ὁ Ἀφροδισίους ἐξηγητὴς ἐκτίθεται, κατασκευάζειν δοκοῦντα μόνως εἶναι φύσει τὰ ὀνόματα καὶ τὰ ῥήματα· τὰ γὰρ ὀνόματα, φησί, καὶ τὰ ῥήματα φωναί, αἱ δὲ φωναὶ φύσει, τὰ ἄρα ὀνόματα καὶ τὰ ῥήματα φύσει.
- ... ὁ περὶ φύσεως ὀνομάτων (sc. λόγος), πότερον, ὥς οἶεται Ἀριστοτέλης, θέσει ἐστὶ τὰ ὀνόματα, ἢ, ὥς νομίζουσιν οἱ ἀπὸ τῆς Στοῆς, φύσει, μιμουμένον τῶν πρώτων φωνῶν τὰ πράγματα, καθ' ὧν τὰ ὀνόματα, καθὼ καὶ στοιχεῖά τινα τῆς ἐτυμολογίας εἰσάγουσιν.
59. Τὸ γὰρ ἐγὰ προφερόμεθα κατὰ τὴν πρώτην συλλαβὴν κατασπῶντες τὸ κάτω χεῖλος εἰς αὐτοῦς δεικτικῶς, ἀκολουθῶν δὲ τῇ τοῦ γενείου κινήσει καὶ ἐπὶ τὸ στήθος νεύσει καὶ τῇ τοιαύτῃ δείξει ■ ἐξῆς συλλαβὴ παρέκπεται, οὐδὲν ἀπυστηματικὸν παρεμφαινουσα, ὅπερ ἐπὶ τοῦ ἐκείνου συντάττειται.
- Πρωτότυπον μὲν τὸν ἐστὶ τὸ κατὰ τὴν πρώτην θέσιν λεχθέν, οἷον «Γῆ». Παράγωγον ■ τὸ ἀφ' ἑτέρου τὴν γένεσιν ἐσχηκός, οἷον «Γοιήτης».
61. ... καὶ ἔοικε τὸ μὲν πρωτότυπον τῷ πρωτοπλάστῳ ἄνθρωπῳ, τὸ δὲ παράγωγον τοῖς ἐξ αὐτοῦ τοῦ πρωτοπλάστου γενομένοις.
62. Εἰδέναι γὰρ δεῖ ὅτι ἡ φύσις γινώσκουσα ὅτι κοινωνικὸν ἔμελλε γενέσθαι τὸ ζῷον τοῦτο, ἔδωκεν αὐτῷ φωνήν, ἵνα διὰ ταύτης ἀλλήλοις σημαίνωσι τὰ αὐτῶν νοήματα. Καὶ συνελθόντες οἱ ἄνθρωποι συνέθεντο πρὸς ἀλλήλους τόδε μὲν, εἰ τύχοι, «ἐρύλαν» ὀνομάζεσθαι, τόδε δὲ «λίθον»...· κατὰ τοῦτο μὲν οὖν τὸ σημαίνόμενον ἔλασσι φωναὶ ὀνομάζονται. Κατὰ δευτέραν δὲ ἐπιβολὴν ἐκασπέφοντο ὅτι ταῖς μὲν τῶν φωνῶν δύναται συντάττεσθαι

- ἄρθρα, χρόνοι δὲ οὐχί, ἅπερ ἐπέλεσαν ὀνόματα, ταῖς δὲ χρόνοι μὲν συντάσσονται, ἄρθρα δὲ οὐ, ἅπερ εἰσὶ ῥήματα.
63. Ἔστι δὲ λόγος ἅπας μὲν σημαντικός, οὐχ ὥς ὄργανον ἐλ, ἀλλ' ὥςπερ εἴρηται κατὰ συνθήκην.
64. Τὸ δὲ λογικὸν μέρος φασὶν εἶναι εἰς δύο διαιρεῖσθαι ἐπιστήμας, εἰς ῥητορικὴν καὶ εἰς διαλεκτικὴν... τὴν τε ῥητορικὴν ἐπιστήμην οὖσαν τοῦ εὖ λέγειν περὶ τῶν ἐν διεξόδῳ λόγων καὶ τὴν διαλεκτικὴν τοῦ ἀρθῶς διαλέγεσθαι περὶ τῶν ἐν ἐρωτήσῃ καὶ ἀποκρίσει λόγων, ὅθεν καὶ οὕτως αὐτὴν ὀρίζονται· ἐπιστήμην ἀληθῶν καὶ ψευδῶν καὶ οὐδετέρων.
65. Διαλεκτικὴ δὲ ἐστίν, ὥς φησι Προσειδώνιος, ἐπιστήμη ἀληθῶν καὶ ψευδῶν καὶ οὐδετέρων· τυγχάνει ■ αὕτη, ὥς ὁ Χρύσιππος φησι, περὶ σημαίνοντα καὶ σημαίνόμενα.
66. Κάλλος δὲ ὀνόματος τὸ μὲν, ὥςπερ Λικύμνιος λέγει, ἐν τοῖς ψόφοις ἢ τῷ σημαινόμενῳ, καὶ αἶσχος δὲ ὡσαυτῶς.
67. Οὐ γὰρ πρὸς τὸν ἔξω λόγον ἡ ἀπόδειξις, ἀλλὰ πρὸς τὸν ἐν τῇ ψυχῇ, ἐκεῖ οὐδὲ συλλογισμός. Ἄει γὰρ ἐστὶν ἐνστήναι πρὸς τὸν ἔξω λόγον, ἀλλὰ πρὸς τὸν ἔσω λόγον οὐκ ἀεὶ.
68. Ἔστι μὲν οὖν τὰ ἐν τῇ φωνῇ τῶν ἐν τῇ ψυχῇ καθήματα σύμβολα, καὶ τὰ γραφόμενα τῶν ἐν τῇ φωνῇ. Καὶ ὥςπερ οὐδὲ γράμματα πᾶσι τὰ αὐτά, οὐδὲ φωναὶ αἱ αὐταί· ὅν μέντοι ταῦτα σημεῖα πρῶτων, ταῦτά πᾶσι καθήματα τῆς ψυχῆς, καὶ ὅν ταῦτα ὁμοιώματα πράγματα ἤδη ταῦτα.
69. Ψεῦδος· ἀντὶ τοῦ ψευδῆς. Ταῦτα δὲ κατὰ τοῖς Στοϊκοῖς λεκτὰ καλεῖται τὰ πρὸς τὴν σημασίαν δι' ἄλλων φερόμενα.
70. Αὐτοὶ γε μὴν λέγουσι, τοὺς ἀπαγορεύοντας ἄλλο μὲν λέγειν, ἄλλο δ' ἀπαγορεύειν, ἄλλο δὲ προστάσσειν· ὁ γὰρ λέγων «μὴ κλέψῃς», λέγει μὲν αὐτὸ τοῦτο, «μὴ κλέψῃς», ἀπαγορεύει δὲ κλέπτειν, προστάσσει δὲ μὴ κλέπτειν.
71. Ὁ Ἀριστοτέλης διδάσκει διὰ τούτων, τίνα ἐστί τὰ προσηγομένους καὶ προσεχῶς ὑπ' αὐτῶν σημαινόμενα (sc. ὑπὸ τῶν φωνῶν), καὶ ὅτι τὰ νοήματα, διὰ δὲ τούτων μέσων τὰ πράγματα, καὶ οὐδὲν ἕτερον δεῖ κατὰ ταῦτα ἐκινεῖν μέσον τοῦ τε νοήματος καὶ τοῦ πράγματος, ὅπερ σὶ ἀπὸ τῆς Στοῆς ὑποτιθέμενοι λεκτὸν ἡξίουσιν ὀνομάζειν.
72. (Οἱ ἀπὸ τῆς Στοῆς) τρία φάμενοι συζυγεῖν ἀλλήλοις, τὸ ■ σημαίνόμενον καὶ τὸ σημαῖνον καὶ τὸ τυγχάνον, ὅν σημαῖνον μὲν εἶναι τὴν φωνήν, ὅλον τὴν «δίω», σημαινόμενον δὲ αὐτὸ τὸ πᾶν τὸ ὑπ' αὐτῆς δηλούμενον καὶ ὃ ἡμεῖς μὲν ἀναλαμβάνομεθα τῇ ἡμετέρῃ παρυφαιστανόμενῃ διανοίᾳ, οἱ δὲ βάρβαροι

οὐκ ἐπιφύουσιν καίπερ τῆς φωνῆς ἀκούοντες, τυγχάνον δὲ τὸ ἐκτὸς ὑποκείμενον, ὥςπερ αὐτὸς ὁ Δίων.

73. Προφέρονται μὲν γὰρ αἱ φωναί, λέγεται δὲ τὰ πράγματα, ἃ δὴ καὶ λεκτὰ τυγχάνει.
74. Πᾶν τε λεκτὸν λέγεσθαι δεῖ, ὅθεν καὶ ταύτης ἔτυχε τῆς προσηγορίας.
75. Εἰ γὰρ τὰ ὀνομάτινός ἐστι τοῦ ὀνομαζομένου, δῆλον ὅτι αἱ ἀσήμενοι φωναὶ μὴ ὄντας τοῦ ὀνομαζομένου οὐκ ἂν εἶεν ὀνόματα.
76. Ὀνομά ἐστι μέρος λόγου πτωτικόν, σῆμα ἢ πᾶν τι σημαίνον.
